From: n0klv
Topic: 5 Message: 5

Welcome to all new members.

As I was working on my first submission of my log, I had a need for a text editor that showed line numbers, since the ARRL tools uses line numbers as a reference for error messages.

I found this one that seems to do the trick. It's also a pretty good editor for those the write computer programs.

6. ARRL "LOGBOOK OF THE WORLD" GOES LIVE!

Yahoo group: ARRL-LOTW (2003 — 2007)

From: n0klv
Topic: 6 Message: 6

ARRL "LOGBOOK OF THE WORLD" GOES LIVE!

The long-awaited QSL-cardless ARRL awards and contact credit system "Logbook of the World" (LoTW) officially opened for business this week.
Within its first five days of operation, the system--which is open to all--already had attracted more than 1000 requests for a digital certificate, the essential pass key to LoTW.

"Although Logbook of the World is a tremendous resource for hams chasing
DXCC, VHF/UHF Century Club (VUCC), Worked All States (WAS) and other awards, we hope it will appeal to hams who are not currently active in these awards programs," said ARRL Chief Operating Officer Mark Wilson, K1RO. "The proliferation of logging software has stimulated activity and
interest in contesting, and submitting log data and verifying award credits online is a logical next step."

Data integrity has been a watchword of the LoTW since the project's conception, and that starts with a digital certificate. Obtaining a digital certificate involves a combination of on-line filing and good old-fashioned snail mail. The first step is to visit the ARRL Logbook of
the World Web page <http://www.arrl.org/lotw>, download the LoTW software
and request a digital certificate that ties the participant's identity to
a digital key.

"We will need to verify you are who you say you are," ARRL Membership Services Manager Wayne Mills, N7NG, explains. "The security of the entire
system depends heavily on the method used for verifying the user's identity." This first step is called authentication. Everyone who plans to
use LoTW first must obtain a digital certificate. There are no exceptions.
For US amateurs, this process relies on your mailing address in the FCC
database, which must be current.

For non-US amateurs, authentication will rely on other documentation, primarily a copy of the participant's Amateur Radio license and another
official identifying document. Mail these copies to ARRL, Logbook of

the
World Administrator, 225 Main St, Newington, CT 06111 USA.

Assuming everything goes smoothly, US licensees requesting a digital certificate soon will receive a postcard in the mail that contains a password."The first batch of postcards has been mailed, and some people
have uploaded their passwords," Wilson said. "Those will be checked, and
the first batch of digital certificates should be e-mailed to users September 22."

Users then should go to the LoTW Web site and enter the password to complete the processing of their certificate request. Once the password
has been entered, the digital certificate will be e-mailed within a working day or two. Non-US stations will receive their digital certificates via e-mail once their documentation has been received at ARRL
Headquarters and authenticated.

Participants will use their digital certificates to "sign" and upload either Amateur Data Interchange Format (ADIF) or Cabrillo-formatted files.
Participants also may use their primary digital certificates to obtain additional certificates necessary to submit log data and obtain award credit for contacts made under formerly held call signs.

At the heart of the Logbook of the World concept will be a huge repository
of log data provided by operators--from individual DXers and contesters to
major DXpeditions--and maintained by ARRL. Mills says the system will benefit big and little guns alike by providing quick QSO credit for ARRL-sponsored awards, especially DXCC.

Obtaining a digital certificate and uploading log data are free of charge.
There will be a per-QSO charge for each contact credit used, but Mills expects it will be much less than the typical costs involved with exchanging paper QSL cards. When you use an LoTW confirmation for an award
credit, the fee will be added to your account and shown in the user's record. The user will be able to pay for these charges on-line using a credit card.

Mills' article, "Introducing Logbook of the World," appears in the October
issue of QST. LoTW news and announcements will be posted to the Logbook of
the World Web site <http://www.arrl.org/lotw/>.

Wilson commended ARRL Web and Software Development Department Manager Jon
Bloom, KE3Z, and the other contributors to the project "for their dedication and hard work that made Logbook a reality."

What tools are out there that will allow quick entry of old manual log data so it can be converted to an ADIF file? I have uploaded all my data logs, but would like to start working on my manual logs when I have leisure time.

Duffy,
Do you mean some other way than entering the information into your current logging program? And if so, what is your current logging program? Reason that I ask is that some of them use .mdb files that can be read using Access or Excell. If so, it would be easy to create a new "log file" and use Excell to populate it. Then open that database with your logging program and then export it as an ADIF file.

Currently I use MixW for logging. It produces an ADIF file o.k., but it not that great at entering in old, non-current or live, data. I would like a program that allows me to quickly enter the date, freq, mode, time, station, and then be able to output what I entered into an ADIF file to upload to LOTW.

Duffy, I believe Tqsl will do that. Open Tqsl and select new ADIF file and start a one by one log file ready to upload..

12. Save certficate problem

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-03 20:29:17 UTC
From: nj2dx
Topic: 12 Message: 12

Is any body else having trouble saving a certificate in TQSLCert?
It's asking me for a password to unlock the private key and I'm
pretty sure I'm entering the correct one however TQSLCert just keeps
asking me for the password. It just blanks out the field after I
click the OK button. It doesn't even tell me the password was wrong.
I had wondered if it had any thing to do with an exclamation mark
being used as the last character of the password. I know it's a long
shot and I probably just forgot the password however I usually don't
forget passwords. However with 4 required by LoTW maybe I did mess up.

Since I can't save my certificate I can't use the TQSL program on my
other computer. (Work vs Home).

Any thoughts or suggestions? Other then contacting ARRL which I've
already done but haven't heard from yet.

There is an update out on the LOTW page to deal with that problem.

That is a problem with the first (public) release of the tQSL
program (1.06). Go to the LotW web site, download the new
version (1.08) and install it. The password problem was fixed
in version 1.07 (unfortunately, after I lost my certificates).

I got my certificate back yesterday and went to work uploading my logs. Things went pretty well, but there is one apparent glitch which I have notified ARRL about.

Since my ADIF files was pretty big (about 7MB) I used TQSL to bust it up into year-long chunks. As I was uploading the files via the web interface it seemed to me that some LOTW was reporting different contact totals than TQSL did. On examination, this was true. Some years were missing several hundred contacts which TQSL has reported writing, but LoTW online was not reporting.

Just for grins I sent one of the suspect .tq8 files as an email attachment, rather than uploading via the web. LoTW came back with a proper count on this one.

So it appears for now it might be best to send your logs in via email attachment.

Otherwise, everything went well. I have about 25,000 QSO's uploaded, and LoTW reports 517 matches, or about 2% return. Not bad for so early in the game. Most are US but there is already a scattering of DX matches too.

DXKeeper will do that. Its free, and available via www.qsl.net/dxlab .

Be sure to un-check the "optimize for real-time QSO entry" box when entering batches of old QSOs.

Hi Tom,

I had similar problems like you. After several tries, I switched to
upper case letters, apparently that's how I sent my chosen password to
ARRL Lotw. The password is the one you have chosen, and not the one with
the postcard, or the e-mail one that the ARRL sent you.
So, keep trying and good luck.

19. Log problem

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-03 21:52:20 UTC
From: Phil Cooper
Topic: 19 Message: 19

Hi all,

I had my certificate from the ARRL LOTW last weekend, and then started to chop up my log into manageable proportions, and then emailed the first part, just to check it worked.

Unfortunately, I got an auto-response back that said :
2003-10-02 18:48:00 LOTW_QSO: Processing file: gu0sup1.tq8
2003-10-02 18:48:00 LOTW_QSO: Error in record 1: tCERT error: unable to get local issuer certificate
2003-10-02 18:48:00 LOTW_QSO: Record 1 ignored due to errors
2003-10-02 18:48:00 LOTW_QSO: Error in record 2: tSTATION CERT_UID (1) doesn't match any tCERT CERT_UID
and so on, for the first 100 entries, after which it says that 100 errors is the limit.

My question is what does "unable to get local issuer certificate" mean?

I haven't yet downloaded 1.08, so is this a problem with 1.06 only?

I tried accessing the LOTW pages today, and got "unable to find server". Was that just me?

I had been a user of the trial version, and that worked well, with no problems.

Thanks in advance for any replies.

DXKeeper will do that. Its free, and available via www.qsl.net/dxlab .

Be sure to un-check the "optimize for real-time QSO entry" box when entering batches of old QSOs.

Subject: [ARRL-LOTW] Re: Manual to ADIF

Currently I use MixW for logging. It produces an ADIF file o.k., but
it not that great at entering in old, non-current or live, data. I
would like a program that allows me to quickly enter the date, freq,
mode, time, station, and then be able to output what I entered into an
ADIF file to upload to LOTW.

22. "Logbook of the World" off like a rocket

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-04 01:53:14 UTC
From: Jim Reisert AD1C
Topic: 22 Message: 22

```
***************
The ARRL Letter
Vol. 22, No. 39
October 3, 2003
***************
```

==>ARRL "LOGBOOK OF THE WORLD" IS OFF LIKE A ROCKET

Logbook of the World" (LoTW) <http://www.arrl.org/lotw>--the League's new QSL-cardless awards and contact credit system--has proven to be a huge hit with the amateur community. Since opening September 15, LoTW has acquired more than 2200 registered participants. Another 2400 or so applications are pending, and the QSO database of 4900 uploaded logs had topped 8 million contacts at week's end.

"Certainly the number of Qs that we've gotten is well above what we expected at this point," said ARRL Membership Services Manager Wayne Mills, N7NG, who has been sharing duties with Assistant to the CEO David Patton, NN1N, as point man for LoTW. ARRL Web and Software Development Department Manager Jon Bloom, KE3Z, has been handling software development and updating for LoTW.

LoTW is open to all, and applying for a digital certificate is the first step toward taking advantage of the system. The digital certificate authenticates the user's identity.

ARRL will maintain the ballooning repository of log data from casual operators, DXers, contesters and major DXpeditions. LoTW will be able to provide quick QSO credit for awards programs by identifying contact matches within submitted log data. There have been 51,000 such matches to date. Registered participants then will be able to apply LoTW-confirmed QSO credits toward ARRL awards, such as DXCC, WAS and VUCC.

Work continues on the last major LoTW component--the Web pages to apply LoTW confirmations toward ARRL-sponsored awards. Mills expects that LoTW also will one day provide contact credits for non-ARRL programs. "Major award sponsors have expressed interest in using LoTW records, and details are pending," he said.

The key to the ultimate success of LoTW is for users to upload as much log data as possible. The more contacts in the database, the better the chances of a QSO match.

LoTW eventually will be able to search users' DXCC records and find new credits automatically. The program also will provide full viewing of users' DXCC records, automatically alert users to new awards achieved and offer comprehensive support for many other awards.

Mills cautioned new users that LoTW permits just one digital certificate request per call sign. He advised that once users apply for a certificate, they should not attempt to alter it or create another request. Any errors, he points out, can be corrected later. For US users, the first certificate has to be for a current call sign that's in the FCC database. After you get the certificate, you can request additional certificates for formerly held call signs.

While the digital certificate is free, LoTW will charge on a per-credit basis to apply credits toward awards. "Logbook of the World is an alternative to collecting QSL cards by mail," Mills said. Fees <http://www.arrl.org/lotw/fees> range from 25 cents for a single credit to 15 cents per credit in lots of 500. Users may purchase credits in advance, but LoTW fees do not also cover award fees.

"It turns out that this is a much cheaper way to collect credits for DXCC," Mills asserted. "Overall, we are very happy with the progress and user acceptance."

This week, EchoLink <http://www.echolink.org> announced that it would accept ARRL's LoTW's digital certificates to authenticate new users as an alternative to providing a copy of their amateur license.

News and announcements will be posted to the Logbook of the World Web site <http://www.arrl.org/lotw/>.

23. LoTW FAQ... Something Interesting In There....

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-04 15:13:28 UTC
From: wb0wao
Topic: 23 Message: 23

I don't know how many caught it, but there is a line in there that pretty well intimates that the League will be offering "new" awards in conjuction with LoTW (and I assume they will be available the "old fashoned" way as well). Wonder if they have them developed yet or they are in the planning/thinking stages. I would love to see an HF award kinda like the VUCC award for VHF/UHF.

I don't think that you should assume that awards will be available the old fashion way. The reason is the man power cost of card checking. With LoTW it is easy to do a search on anything. So it would be easy to do an award like WAS with last letter of the call the same as your last name. This is one of the bennies of digital QSLs. On the other hand we LoTW on line, it may free up some of the checkers to check other awards.

25. Re: Save certficate problem

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-04 21:20:10 UTC
From: nj2dx
Topic: 12 Message: 25

I guess I should have mentioned that I've been using version 1.08
however still have the problem...

If I don't hear back via email from the ARRL in a couple of days I
guess I'll have to call them to find out if I have to get a new
certficate. Strange thing is I can sign ADIF files just fine but I
can't save a certificate. Meaning when I get prompted for the private
key password in TQSL it works fine. However when prompted for the
private key password in TQSLCert and entering the same exact password
it just blanks out the text box and asks me again.

Seems like a bug to me but I don't know why this is occuring.

If you have to get a replacement certificate (did you try redownloading the certificate from the web site?), be prepared to jump through hoops and wait a couple of weeks.

My original certificate was lost due to the password problem with tQSL 1.06. It took nearly a week for staff to figure out what to do (issue a "superceeding" certificate) and I still had to submit a new request. I'm still waiting for the damn postcard. Even though I have been 'verified' once and have access to the LotW web site, they can't simply generate a certificate from my request and put it on the web site for me to download.

Well at this point I want to upload my logs which it appears I can do
so I'm going to do that. However it would really be nice to be able
to save my digital certificate so I have a back up as well as be able
to transfer it to my work computer.

From: Phil Cooper
Topic: 28 Message: 28

Hi all.....

Just to say that I have solved my problems, and the answer - well, part, at least - may help one or two others.

I was getting a robot reply from the ARRL-LOTW that said "tCERT error: unable to get local issuer certificate" and it would appear that this was due to the fact that I still had a licence from the old beta-test days, and hadn't deleted it.

I was also having problems in part because I was still using TQSL v1.06 and it would appear that you DO need to get v1.08 to make everything work OK.

I've now uploaded the first part of my log, with contacts from 1993 to 1996, and now have 24 QSL confirmations.
Over the next few days, I will upload the rest of my logs, right up to CQWW RTTY 2003.

32. getting a UK club certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-05 11:56:57 UTC
From: James
Topic: 30 Message: 32

Hi

I wonder if anyone knows the situation for getting a digital certificate for a UK club radio station. I know that if I want one for my own call I have to provide a photocopy of my licence plus one other official document (driving licence, passport etc). The situation with the club station is more difficult. For the main club call we could produce a licence, but probably not another official document, the situation is even worse for the contest call sign (M4U) as this does not have a specific licence, just a separate sheet of paper saying we can use it in specific contests.

I suppose the licence for the original call plus this piece of paper would suffice in lieu of the licence, but there is absolutely no other document available that would support the certificate.

We generate some 4,000 - 6,000 QSO's per year and a large number of these are in the US.

I would appreciate any thoughts on how we could obtain certificates for our club call and our contest call.

Hi,

I don't speak for ARRL and I don't know there official policy, but I got
a cert for both my Boy Scout club
station and a special event call (N1H) based on my own station cert.
The concept is that if one
sign a certreq with a cert then that is trusted, just like the
TrustedQSL they are trusted. Therefore
if one sign a bogus certreq they have committed fraud and all their
certs may be revoked if discovered.

If you is going to commit fraud you don't leave a trail positively
identifying you as the person committing
fraud.

Hope this helps

> Thanks ,
> Tom K5IID

If you can get the log into some sort of editable ascii
format, and can operate a spreadsheet program, such as
Excel or Quattro, here is one approach that may help:

The program asc2adif will convert a comma-delimited
ascii log, created by your favorite spreadsheet program,
into an ADIF file. asc2adif is available at
http://kh2d.net/software/asc2adif.cfm

The process is:
1. Get the log into ascii format.
2. Edit out headers,page breaks, blank lines, etc, so the
log contains only qso data.
3. Import the ascii log into a spreadsheet, formatting it
into columns.
4. Clean up the columns if required, moving some blocks of
data around to get everything lined up vertically.
5. convert the dates to mm-dd-yy.
6. convert the times to hhmm (24hr)
7. convert band data to mhz or meters
8. move callsigns to column A
9. Move band to column B
10. Move mode to column D
11. Move date to column Q
12. Move time to column R
13. Get rid of all other data, unless you feel compelled to
mess with it, and it fits one of the other asc2adif headers
(rst's, freq, name, note, dxcc, qslsent, qsl rcvd,state, iota,
county, zone, qth). None of this is really required though.
14. Save the file as an ascii, comma-delimited text file.
15. Run asc2adif to convert to ADIF.

All of this sounds harder than it actually is, especially if you
are halfway good at the spreadsheet program. The only showstopper

is if the date or time is in such a goofy format that you cannot convert it automatically to one of the formats required by asc2adif. For contest logs, even the date is not a problem, because only two days are involved, and you can easily paste the correct format into the date column.

I've converted a lot of my old logs this way. It was a great refresher course in spreadsheet tricks! Now that I don't have any more files to convert, I'm an expert at a useless task!

This may be another option:

Excel - ADIF Converstion Tool
Helpful tool that you can use to take old manual logs and enter them into an Excel spreadsheet to have the data converted into an ADIF file
http://www.wb8nut.com/download/Manual_ADI_entry.xls

Links to some other conversion options can be found on the links page of this group.

42. Maintaining Home Log Book

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-05 18:09:26 UTC
From: Steve
Topic: 42 Message: 42

I was wondering if anyone has come up with a good way to maintain your station log after you have been credited with QSO's worked from LOTW. I would like to keep my log up to date with what is confirmed by LOTW and any QSL cards that I have that have not been confirmed by LOTW that must be submitted. I have been all over the web site and can not see any way to do this except print each page one at a time and then sit down and find them in my log. Printing each page is fine the first time but as we all know these could change each day as more logs are loaded. I for one do not look forward to printing each and every page every time I want to update my log . I wish the developers of the program would have made it possible for you and only you the ability to download your own confirmed QSO log then you could at least figured a much better way then printing pages each time. I hope I overlooked something and there is a way to update your log book.

Sorry if I'm off base on this one and the answer was in front of me the whole time.

I don't think you're off base at all. It's something that we NEED. I have posed the request to the powers-that-be in the past and not really heard any response.

I'm sure much more is to come, we just need to be patient I guess.

The important first step is in place - accepting of our input. It just needs the rest of the pieces in place to make it really work.

Dave,

you said...

I've converted a lot of my old logs this way. It was a great refresher
course in spreadsheet tricks! Now that I don't have any more files to
convert, I'm an expert at a useless task!
How about a trip to WV? hi hi
I am by no means an expert on spreadsheets, but have worked with them a bit.
I can probably figure this out...I hope.
A guy that is helping rewrite the Kwiklog system is gonna try to help
also.
This log(Kwiklog) is by far the best there is for county hunting, something
I've been doing for many years. I need 28 more to have them all QRP.
Yes I'm a masochist, but it is a challenge.
Thanks for the info.
See you in a few weeks on SS.

Steve,

I just tried this:

- Highlight the WEB page QSL table.
- Right click and select COPY.
- Open EXCEL and paste the copied table to EXCEL.
- Do this for each WEB page (25Qs) and append the new data to the EXCEL spread sheet.

This will at least get you an electronic copy of your confirmed Qs.

Not only am I a relatively new ham but new to computer logging also.
Using Winlog32 which I like ok and seems to work. Downloaded the
LOTW software last night and registered for the certificate.
Hopefully will receive soon and see how all this comes together.
Great to see how technology melds with amateur radio.

From: Dave Bernstein
Topic: 42 Message: 48

It will not be possible to automate this process until LOTW provides a programmatic interface by which a logging application can determine

1. which QSOs uploaded to LOTW were accepted by LOTW (as opposed to rejected due to errors)

2. which OSOs accepted by LOTW have been subsequented matched (and thus should be considered "received" in one's logging application)

This programmatic interface was requested before LOTW entered alpha test; the LOTW project leader has acknowledged its need. Evidently, the LOTW development team has higher priorities at this moment. Without knowing what they are working on, one cannot agree or disagree with their prioritization, but in general delaying the availability of such interfaces until after production release is bad software engineering.

Thanks for the comments Darryl

I agree about signing a cert req with a trusted cert an perhaps they
will let us do that, but as far as I know the UK certs have to be
applied for by post as our call signs can't be checked against the FCC
database.

Subject: RE: [ARRL-LOTW] getting a UK club certificate

Hi,

I don't speak for ARRL and I don't know there official policy, but I got
a cert for both my Boy Scout club
station and a special event call (N1H) based on my own station cert.
The concept is that if one
sign a certreq with a cert then that is trusted, just like the
TrustedQSL they are trusted. Therefore
if one sign a bogus certreq they have committed fraud and all their
certs may be revoked if discovered.

If you is going to commit fraud you don't leave a trail positively
identifying you as the person committing
fraud.

Hope this helps

Another option might be to download CT from http://www.k1ea.com

Convert your ASCII log to CT's .RES format, then use the R2B9 utility to create a CT .BIN file. Finally use the CT to ADIF conversion to generate an ADIF file.

Or you can try WT4I Cabrillo Tools. ARRL will accept Cabrillo logs in lieu of ADIF.

Subject: Re: [ARRL-LOTW] Re: Manual to ADIF

Another option might be to download CT from http://www.k1ea.com

Convert your ASCII log to CT's .RES format, then use the R2B9 utility to
create a CT .BIN file. Finally use the CT to ADIF conversion to generate

an ADIF file.

Or you can try WT4I Cabrillo Tools. ARRL will accept Cabrillo logs in lieu of ADIF.

I got mine 4 hours after entering the password. That was September 25. I saw a report a couple of days before that from someone receiving his certificate half an hour or so after sending the password. But with the increasing workload (requests from DX should now be coming in) I can imagine things are going a little slower now...

I entered my password two days ago. How long does it usually take to get your certificate emailed to you? I am surprised that it doesn't happen right away.

Greetings,

Keep in mind that uploads are done in batch mode. This is because validating the tQSLs is
very CPU intensive. We also had the CA QSO party and the band conditions was very good
so my guess is many people was uploading there logs yesterday and today.

Also keep in mine that LoTW has only been public for about 2 weeks. I was/am only a light
user of eQSL and I remember 2 or 3 problems I had uploading QSOs and they do it the easy/lazy
way without any real security. The model that LoTW when with is much more complex, but
they seem to have do a very good job with their design (I didn't have anything to do with it).

Also keep in my that LoTW is processing close to 1 million QSO per day. eQSL was never
close to that. So on many levels you are comparing apples and oranges.

My experience has shown that you have three choices.

1) Go back to your computer log and try to find where the error
is. Usually I find that it's because I often have dyslexia of the fingers.
(I type like I'm wearing boxing gloves) Unfortunately, this requires you
to create a new adif file and start over.

2) Go into your adif file, find the error, and correct it. (adif file can
be opened with Word)

3) Go into the adif file and delete the contact that is causing the
error. This is usually the easiest.

None of these are any fun, but it moves the process along.

66. Suggestion for LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-06 18:46:44 UTC
From: Phil Cooper
Topic: 66 Message: 66

Hi all,

Well, I managed to upload the rest of my log today, so there are about 25k QSO's in LOTW for GU0SUP.

It shows I have about 724 confirmed contacts, which is great, but I feel that the ARRL should make this data available as a download, or - to keep the integrity, maybe as a request for the file that is then sent to the email address they have listed for communication.
Using cut & paste on the confirmations page and then copying that to an Excel file is not ideal!

As most of my confirmations are from the USA, it would be great if it somehow managed to show what States had been confirmed. It could even go so far as to show what Zones had been worked.
As the upload file was created with an ADIF that probably did include Zone and State, it's a pity this info wasn't imported as well.

Is there now a need for a bit of software to track what you have confirmed on LOTW in terms of countries, States and CQ Zones?

73 for now

Hmmm, I don't see "band_rx" as an officially recognized field in
the current ADIF specification. Here's what the spec says about
undocumented fields:

"Additional fields that are not part of the ADIF specification for the
file may be added by those creating ADIF files. This will permit export
of user-defined fields. However, there is of course no guarantee that
these undocumented fields will be imported by a program reading ADIF
files, or that a chosen name may not be used for another purpose and
imported into the wrong field in future ADIF specifications. Therefore,
creators of ADIF files are encouraged to cooperate when adding new fields
to so as to derive maximum benefit from ADIF."

I guess "band rx" is to enable cross-band qso's, such as satellite?

Maybe you can tweak your logging program to delete this field, and record
just
"band?"

Maybe you can do a global search and replace with a word processor to
change
"band_rx" to "band?"

Maybe you have another field in there called "band_tx?" You will need to
deal with
that also. Maybe you can do a second global search and replace and
replace "band_tx"
with "NOTES"

Hi Phil,
Eventually, as the system gets up to speed, you will be able to check
the system and see what countries, states, etc. you have confirmed and
will also be given instructions to choose others that you want credited.
Take a look at section 6 in the LoTW Expanded FAQ's on the Home page of
LoTW. I guess we have to keep in mind that they just cracked this little
critter on the behind and we have to give him time to grow. I know that
there are a number of ideas that I would like to see implemented.

BAND_RX and FREQ_RX are defined in the proposed ADIF 2.0 specification. Despite the fact that ADIF 2.0 has not yet been approved, I was about to add support for these fields to DXKeeper because users tell me that LOTW requires them for satellite QSOs. I checked the LOTW web site but can find no statement as to which ADIF fields are required. Can anyone point me at the list of required fields? Is FREQ_RX required for satellite QSOs? If so, then why is the presence of BAND_RX generated errors?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-06 19:58:31 UTC
From: Hans K0HB
Topic: 66 Message: 72
Attachments: 2 described; binary payloads are missing from this source WARC

I guess I'm just too damned easy to please! All my uploads have gone fine. My certificates for all my old call signs came promptly. I have about 650 QSL's already appearing on the system.

I understand this is a new system, and many planned features are not yet installed or turned on. I guess that gives me something to look forward to.

Just can't seem to become eligible for membership in IOoDHW (International Order of Dismayed Hand Wringers).

Hi Phil,
Eventually, as the system gets up to speed, you will be able to check
the system and see what countries, states, etc. you have confirmed and
will also be given instructions to choose others that you want credited.
Take a look at section 6 in the LoTW Expanded FAQ's on the Home page of
LoTW. I guess we have to keep in mind that they just cracked this little
critter on the behind and we have to give him time to grow. I know that
there are a number of ideas that I would like to see implemented.

73. RE: [ARRL-LOTW] Suggestion for LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-06 21:13:17 UTC
From: Dave Bernstein
Topic: 66 Message: 73

I am neither dismayed nor wringing my hands; I am simply dissapointed that something so critical to the architecture of this system-- namely its external interfaces -- was omitted from the beta, much less from the production release. LOTW was designed to exploit the fact that amateurs increasingly maintain their logs in databases. Yes, you can upload your QSOs and visually inspect the results on a web page. Have you tried synchonizing your logging application's database with LOTW yet?

Subject: RE: [ARRL-LOTW] getting a UK club certificate

Thanks for the comments Darryl

I agree about signing a cert req with a trusted cert an perhaps they will let us do that, but as far as I know the UK certs have to be applied for by post as our call signs can't be checked against the FCC database.

Subject: RE: [ARRL-LOTW] getting a UK club certificate

Hi,

I don't speak for ARRL and I don't know there official policy, but I got a cert for both my Boy Scout club
station and a special event call (N1H) based on my own station cert. The concept is that if one
sign a certreq with a cert then that is trusted, just like the TrustedQSL they are trusted. Therefore
if one sign a bogus certreq they have committed fraud and all their certs may be revoked if discovered.

If you is going to commit fraud you don't leave a trail positively identifying you as the person committing
fraud.

Hope this helps

If it were only a feature, there would be no issue. Delivering features incrementally is generally a good idea.

The interface that enables applications to query the database has significant impact on the architecture of LOTW. By failing to design, implement, and verify this interface prior to production release, LOTW's developers are taking a serious risk -- that architectural changes will not be required when they finally get around to it. Once a system is released to users, architectural flexibility is severely reduced.

This is far from silly, Hans. Failure to get the architecture "right" is one of the major reasons that software projects fail.

78. Saving Certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-06 22:49:33 UTC
From: kf8n
Topic: 76 Message: 78

I am also having problems saving a certificate (tq5) for one of my previous calls. Using Ver 1.08, have tried Caps, small letters, and other cominations to no avail. It worked OK for my original and one former call, but not this one. Have been exchanging e-mails with ARRL but no solutions yey. Even re-installed V1.08, went back to V1.07 still NADA. I normally use just one password and as soon as I enter it on the save part, it just does nothing and have to abort. Similiar to NJ2DX's problem.

Any suggestions

73/Bill

Certificates are .tq6 files, not .tq5. (Maybe that was just a typo on your part, but had to mention it.)

Anyhow, I had a problem loading my second cert too. This was over the weekend, so while waiting for LoTW guys to come back to work Monday, I was poking around the LoTW site and under "My Certificates" I noticed a file named "certs.tq6". I downloaded that, and it loaded up into tQSL just fine. Not sure what that file is about, but my suspicion is that it is a "composite" file of all of my valid certificates.

Yes. I just need to look up the 'documentation required' section
so I can find out what paperwork I need to send in. (I'm a non-US
station.) I'm not sure why they're serving non-secure static information
like that and the FAQ from the secure server; it just makes the
transfers slower for no reason.

I emailed them but imagine they already know about it. Or have gone home
for the night. Pity because I wanted to mail this stuff off today.
Does anyone have the mailing address handy?

86. 10 million and counting...

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-07 03:26:48 UTC
From: Gert E. Janssens
Topic: 86 Message: 86
Attachments: 1 described; binary payloads are missing from this source WARC

At Oct 7, 0318Z:

Logbook Status
10,000,862 QSO records have been entered into the system.

83,332 QSL records have resulted.

2,485 Users are registered in the system

3,070 Certificates are active

6,219 User files have been processed

Not bad for three weeks work!

73,

Gert

Yes, it seems to be working fine. I uploaded about 2,800 records and each day find another 20 or so QSLs. As of today I am up to 179. These are all US and a couple of Canada. Once the DX stations start entering info, the numbers should increase dramatically.

It would be great if ARRL could get the "Awards" feature going. This would really be great to show where one stands in WAS or DXCC.

Unfortunately DX stations are a few weeks behind due to the delay while
our info is in the post. I just sent mine off today and it'll take 1-2
weeks to arrive at HQ.

I was using the beta system and quite liked it though. Better then eQSL,
dare I say..

I'd prefer a discount, because I think 25c per QSL is too much.
Maybe they're trying to preserve revenues in case QSL bureau traffic
declines. The VK QSL bureau doesn't charge.

Hamish,
Don't you think that 25 cents or less in volume
is better than having to send the cards to the states.
Plus when you add in the costs of obtaining the cards
in the first place (which I still intend to do), it just seems
like a good deal to me!

From: wb0wao
Topic: 91 Message: 91

Group,
Pardon the slightly OT post, but I would like to inform you that today the Contest Committee of the Michigan DX Association has decided, in order to help promote LoTW usage, that this years PSK-31/PSK-63 "DeathMatch" contest will award 100 "Bonus Points" to stations entering the contest who upload their contest logs to LoTW within 30 days after the contest. Hopefully, this will increase participation in both LoTW and the "DeathMatch" contest. Uploading of the logs is NOT manditory, but it is hoped that with the offering of additional points, most stations will take advantage of the opportunity.

TNX for the bandwidth

Does anybody know when we can see updated DXCC rules and prices on the ARRL WEB Page? Present rules are from April 2003 and does not mention LotW at all...

Also will ARRL drop $20.00 nonmemeber processing fee for submissions through LotW or it will remain in place? If they are going to keep this charge then using LotW will be more expensive then ordinary QSL submission (120 QSO for $20.00 versus $50.00).

Still not sure whether I am going to use the system. I can understand that ARRL want to see my license (if this requirement is followed P5/4L4FN QSO's would never make it to LotW but his QSL's are OK for DXCC), but I can not see any difference between scanned image I send by e-mail and photocopy sent by ordinary mail. Both can be forged the same way... In addition to the above, picture ID requirement seems very much unnecessary to me...

Well, as I said, outgoing (and incoming) QSL cards are free through the VK bureau, so it doesn't cost me anything to send cards to the US. And it wasn't too expensive to get them made in the first place (less than 25c US each).

It seems quite a lot beyond what it is costing the ARRL to provide. Someone posted that one million QSOs are already registered - if all of those are used for QSL credit that's already $250,000!

Hi Boris,

Go to www.arrl.org/lotw/default and on the right hand side click on fees. Then for additional clarification read the FAQ dealing with fees.

The only fees required are the per qso charge. Additional charges are made only if you order a paper certificate, pin, plaque, etc. There is no longer a $20.00 non member charge. I will enjoy not having to send the cards and pay the postage both ways. I only know one ham who had cards lost in the mail but he lost over three hundred and they were never recovered.

I believe that the mailing requirements for non US hams are in part to make sure they have the correct address from your home and your license in an attempt to verify that you are who you say you are. The driver's license, or other ID, does seem a bit redundant but you are required to send back a printout of a computer message they will send you so you may as well include a few other papers, hi. It all sort of reminds me of traveling by air now days. It takes longer in the airport to get through all of the paperwork and security than it does to make the flight.

Here in the states we pay postage for QSL bureau services.
It is a lot cheaper, but then you have to add the cost of cards, your
time filling out the cards and taking them to the post office.
Something I was never good at.

> It seems quite a lot beyond what it is costing the ARRL to
> provide. Someone posted that one million QSOs are already

Currently it is ten million but who's counting? ;-)

Remember that QSO don't count for anything, just QSL which is only at
83,341. Of course this will grow. Also keep in mind that most of the
QSL will never be purchased. I would say that less than 1% will every
be purchased. So you see it isn't really the money tree everyone thinks
it is. If they break even
within 5 years I will be very surprised.

From what I have seen so far, most of the entries are US and Canadian. So when the DX stations get their certificates, this should go up quite a bit in number of records and QSLs generated. Right now I have uploaded about 500 records and have 20 QSLs. Still working on inputting old manual records when I have time.

The number is also surprising since I noticed eQSL is only at about 28.2 million and they have been around for a few years. So in less than a month's time, LOTW is more than 1/3 of the way. Great progress for LOTW.

There is quite a bit of different, by sending it via postal service
it becomes much more difficult to fake it. Some from the US say can
buy some New Zealand stamps and drop the letter in the postal box.
So to fake it they would need the help of someone in the country they
want. Where email can some from anywhere and is much harder to trace.

Let's face it guys, all the worry about "faking" a QSL is specious, unless we are all on the honor system. It's would be very easy for hams to send eachother QSL cards for contacts never made. If you accomplish DXCC by underhanded means, only YOU will know. An award achieved via underhanded means is meaningless, but can be done if you have no self-respect.

I think that the LoTW system is a good one, and I have all intention of using it exclusively as the system grows. Any system of QSLing can be "faked" and almost any computer system can be broken into. I think we are worrying about trivia here, when the current system of QSLing has many more "holes" in it than the LoTW. I may be wrong, but just my two cents!

Don't get me wrong I think LoTW is a great idea however no system is perfect!

Today I got a QSL via LoTW and when I checked my logbook for the QSO which was a Sweepstakes contest contact from about 10 years ago. I noticed that the LoTW QSL had a different state then would match the exchange I received during the contest.

Hmm what to do now? Assuming I got the section correct, I can't invalidate the LoTW QSL. Even if I contact the operator I don't think he has a way to correct or delete it. I guess to be honest I would just not use that LoTW QSL toward obtaining an award. However the burden is on me to remember that it isn't valid. So I added a note about this contact in my logbook.

The sending station can edit his station location data in TQSL (obviously has it wrong) and resubmit his QSO's. The resubmission will over-write the current data for that contact.

Hi Tom,

Yep, I am sure this is going to happen. Maybe by calling his attention to it he can fix it. I previously lived in SD and am now in FL. I had to send two files in to reflect this correctly. Perhaps he has changed QTH but sent them all in at once with only his current QTH. We just have to pay attention to detail but we all screw up sometimes.

Yesterday I got a card back via the buro and it said, "Sorry, not in the log". That was pretty strange since he had already confirmed that contact over a year ago.

A few years back I got a card from a DX station who needed SD. I sent him a TNX Qsl card and a year later got my card back saying I was not in the log -- go figure.

All of this wastes time, effort, and money. I guess my point is that all of this stuff happens but it is one heck-of-a lot cheaper to use LoTW -- even when you mess up.

We will just have to wait and see as the system grows to know what the total use will be. The folks who make a couple of bucks on your QSL request won't use it and those who never return a card anyway won't use it but the rest of us can make it fly. The QSL Bureau system has been in place a long time and the return rate there is sad -- not to mention the slow pace.

Hi all, and especially Dave,

I guess this is something that will be required of most shack logging software in the fullness of time, and it may well depend on what the ARRL decide to keep on record.
As far as I can see, some of those stations that have confirmed my QSO's have actually moved to a different State since we had our QSO, so that may prove to be a problem. My QSO's go back over 10 years.

I think the ARRL need to find a way of allowing us to save what QSL data they have for us, and allowing it to be exported.
As you say, this will take time, but there is no major hurry!

Thanks for all your help,

73 de Phil GU0SUP

Hi Boris,

I agree with both of your comments on ID. Emailing a scanned image should be fine, but oh well, I can live with regular mail. The bigger issue for me is sending them a copy of my picture ID. What business does the ARRL have with my drivers licence (or other ID) info? Answer: none. You won't find me on LOTW as long as this requirement exists.

BTW, if I can forge a photocopy of a radio licence, I can forge a photocopy of a drivers licence.

That is true, but as they learn what to look for it will be
easier to spot fraud when they have to forge an Amateur licenses,
government id, and getting a postmark from the country in question
makes it unlikely to be a fraud.

There appears to be some confusion here, maybe on my part. However I did
not have to send a copy of my DL. I submitted a request for a certificate,
and the League verified my license in the FCC Database and issued the
certificate.

I'm startgint to think that maybe I should have been a beta tester :-)

Beware County Hunters!

In my logbook when I "run a county line" I log it as seperate QSOs
from each county. Thus there is a seperate QSO for each county in a
seperate ADIF and thus tq8 file.

HOWEVER when I upload the second tq8 file it will consider it a
duplicate QSO and wipe out the data of the first uploaded QSO.

Thus as a result LoTW cannot record QSOs occuring on a county line
(or other multi station location). I guess when this is resolved I'll
have to re-upload all my data :-(

Once you get a certificate for your primary call, now, you can request additional certificates for each call. It is explained in the LoTW "Getting Started". Doesn't happen to me! DX4WIN exports an ADIF file with minutes *and*
seconds. My QSOs are logged separately, but seconds apart, so they all
show up in LoTW.

That's a shame, since the Canadian IC data is publicly available and (I think) reliable, and the cost of mailing is certainly reasonable. Perhaps the postcard-mailing option will be extended to Canadian hams in the future.

That's why I thought too, at first. The first answer I got when I asked that question was a little vague, but the second was quite clear. The logs ARE combined, maybe not physically, but you will notice that confirmed QSLs are shown in the same list. Which means that sooner or later when you want credit for the QSOs with your old call, you will merely have to indicate it on the form, just like you would do now, with paper QSL cards. This could benefit from some more attention in the FAQ section... 73, Gert ----- Original Message ----- From: Dan To: ARRL-LOTW@yahoogroups.com Sent: Tuesday, October 07, 2003 6:36 PM Subject: [ARRL-LOTW] Re: What about ex-calls... the only problem with this is that you have to load logs for each call sign and the logs are not combined into one log for any award. they told me that this will be fixed in the future. i made dxcc on 10m with my first call sign but the contacts from my present callsign will not add to the total as of now;. 124. TQSL Problem

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-08 01:54:47 UTC
From: Dr. Michael Hunter
Topic: 124 Message: 124

Having problems uploading the certified .TQ8 log. I click file then sign an existing ADIF file. Click station location and select file to sign *.adi. Then select file to create to and save. In the TQSL confirm sign box it says : Is this correct ? I check yes and get the following:

ERROR: Certificate QSO date out of range on line 7. The process aborts and locks up.

I have checked the adi log and the qso is not out of range with the date.

Any suggestions ?

Mike K5HDU

Australian data is on the web (www.aca.gov.au) but I can understand that
the ARRL wouldn't want to pay for postage. Once again an exception for
ARRL members would be quite welcome.

Are you sure? What is the date of the QSO, exactly as it is in the ADIF?
What is the date range on your TQSL certificate?

Darryl,

This is the second time I hear about postmark on the envelope from
you. Would ARRL consider my license and picture ID forged if I send it
from the country other than Bosnia and Herzegovina?

BTW, I got the famous Nigerian letter by mail the other day (with nice
Nigerian stamps on it) but still do not believe to the letter inside...

Oh that's my problem my logbook (my own MS Access database) doesn't record seconds only up to minutes. I guess I'll have to enhance it to use seconds and then patch the 185 county line QSOs and reupload them from those counties. Well live and learn. Thanks!

129. Expalnation of how LOTW REALLY works?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-08 13:35:37 UTC
From: gbaron
Topic: 129 Message: 129

I have been hit with a loss of my certificate. I accidentally erased something when I reinstalled the Golden over the Beta. I guess that when you make a request for a certificate that it must create you private key. Without the private key , you cannot load the certificate.

This has not been made at all clear in the FAQ. They tell you that you should save your certificate but do not tell you that you really need to save 2 things, at least until you get your certificate loaded. You must have the certificate and the private key file. If you do not, you get the error message that there is no private key found when you try to load the certificate received form ARRL.

To make matters worse, if you request another, it is refused. It is refused because they will not allow one call to have 2 certificates with overlapping dates. I can't understating AT ALL why that would be a security risk. It is not a lie or a problem, it is the same person. He should be able to have 20 of them if he wants, no real problem would accrue except for taking up some extra space.

Do I understand this correctly now? A real tecnical paper should be posted of EXACTLY how this works and exactly what you have to keep and protect. Crashes DO happen unfortunately.

My opinion is this is unnecessarily complex IN THE EXTREME, this is not the CIA trying to save the world. My credit card does not have nearly this security! Nevertheless, we have to live with it. The result of power run amok.

Yes, basic public/private key encryption I think. You generate both,
then request that the ARRL sign the public key. You keep and never
disclose the private key.

How did you lose it installing over the beta? Certificate requests had
to come from the release version, not the beta.

> To make matters worse, if you request another, it is refused. It is refused

Duplicates weaken webs of trust. In a web of trust, I trust you because
I trust the ARRL and the ARRL trusts you (they signed your key). But if
you have two keys, how can I be sure that both belong to you and one of
them isn't being used by somebody else in your name?

> Do I understand this correctly now? A real tecnical paper should be posted
> of EXACTLY how this works and exactly what you have to keep and protect.
> Crashes DO happen unfortunately.

Find any paper on public/private key encryption for an explanation.
Or look for documentation for PGP or GNUPG which are general-purpose
encryption programs using the same scheme.

And back up your keys and certificates and make sure nobody else gets
a copy. Particularly for the general case; the key identifies you and
somebody who has your key can impersonate you. It's not so much of an
issue with TQSL(LOTW) because not much damage can be done.

> CIA trying to save the world. My credit card does not have nearly this

That's not a good analogy, because credit card security is terrible.
I would say almost non-existent. Anyone can use your card number and
expiry date without any validation of their identity at all!

That is true but there should be a way to revoke it that is not so
slow. I agree that what you say is true but for this application no
serious damage can be done so I think it is overkill. They aought to
automatically revoke the other if that is a real problem.

Thanks for the reminder Gentlemen. I had not backed the certificate up. I burned it to a CD. Now if I can just keep up with the cd I have it in non-volatile storage.

I am surprised at the ongoing complaints about LOTW. In my humble opinion, it is a helluva tool, and is a lot of fun. Will it replace hard copy QSL's? NO!! We need to use a little judgement here. I will use it for such as WAS on 160 etc. But if VU4 or BS7 shows up in my lifetime, do you think I will sit around waiting for the confirmation to show up in LOTW?

I am not sure that is totally true, but it is effectively true. Your
cert gets export each time you send tQSLs. TrustedQSL cert program may
require the private key to add to it. It
shouldn't.

Having said that you point is well taken. MAKE SURE YOU
HAVE BACKUPS OF YOUR PRIVATE KEY! It doesn't exist anywhere except with
you and can NOT be recovered!

> To make matters worse, if you request another, it is refused.

> of them if he wants, no real problem would accrue except for
> taking up some extra space.

I don't know what ARRL's reason for not allowing more than
one cert per call. I can think of good reasons to have more than one
cert. ie: QSL managers. I would not want to give a QSL manager my
private key, but I would be willing to digitally sign a certreq for him
to be a QSL manager. To me this would be the best of both worlds if the
QSL manager also had to sign the certreq, then if there was any question
about fraud then they would know who signed the tQSL.

You can send mail to ARRL to resolve this problem. I am
sure they don't want to make it easy because without a private key to
sign a new certreq they have to do the authentication all over again.

Check out http://www.arrl.org/lotw/DeveloperIntro.pdf which
is the design document for the project.

> Do I understand this correctly now? A real tecnical paper
> should be posted of EXACTLY how this works and exactly what

The only think ARRL could do about it would be change the software to force you to back to floppy or CD.

> My opinion is this is unnecessarily complex IN THE EXTREME,
> this is not the CIA trying to save the world. My credit card
> does not have nearly this security! Nevertheless, we have to
> live with it. The result of power run amok.

Oh yes it does and a lot more. You just don't see it and the credit companies are willing to let you and the merchant pay for not seeing it. Then every time you make a purchase they validate your card. On top of that they make money when someone uses a stolen credit card. Each transaction that a merchant does they are charged a "discount" rate. That doesn't included the charge-backs and a charge-back fee on purchases that are contested. If a merchant has a lot of charge-backs their discount rate goes up.

Credit card users authenticate once a month using money. Should the ARRL have that high of security and require you to send money once a month to authenticate? I think not!

I am not saying credit card companies support fraud, but they don't loose money on it either. I was in that business for many years and know how it works.

Keep in mind something like the LoTW has never been done before and it may lead the way for a whole new form of ID based upon digital signatures. This project has been public for less than a month and there is going to be problems here and there. In a year things will have changed, what I don't know, but I am sure they will.

I am surprised at the ongoing complaints about LOTW.

The reason for the complaints is the enormous unwarranted complexity of
the entire project. Make one little error and you may have to start all over
again.
The idea is good, the implementation is ingenious, BUT, FAR too complex.
This is not the protection of the country we are talking about here.

In my humble opinion, it is a helluva tool, and is a lot of fun. Will
it replace hard copy QSL's? NO!! We need to use a little judgement here.
I will use it for such as WAS on 160 etc. But if VU4 or BS7 shows up in my

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-08 16:47:22 UTC
From: Joe Subich, K4IK
Topic: 129 Message: 138

Gil,

I also lost my private key due to the password bug in tQSL 1.06.
Assuming you have already uploaded logs with the original certificate,
You will need to e-mail lotw-help (or Wayne Mills @ ARRL) and
request a "superceding" certificate. Your account will be "cleared,"
you will then upload a new unsigned request, wait the week for the
postcard, etc.

You will also end up with a new account on the LotW server ... until
the software folks figure out how to combine the original and new
accounts.

As far as backups ... I am now saving all of my .tq5 (private key)
.tq6 (certificate file) and .p12 files. The .p12 files can be
loaded by any compliant application and are portable across systems.

After generating certificates for all of my old calls/QTHs, I am
in the process of renewing one of them to correct a date issue.

73,

... Joe, K4IK

P.S. LotW is down "for maintenance" this morning ...

Hi Jonathan

We found out late in development that Radio Amateurs of Canada do have the license data available. We believe that with about one week's programming time we can support the same method of authentication for Canadians as are done for US amateurs. But it is far down the list, after being able to export data to logging programs and get a good start on the Awards section of the web page.

Another consideration is that it would cost nearly three times as much for ARRL to mail postcards to Canada. But that's not the reason why this function isn't being used.

73, Dave, NN1N

Subject: Re: [ARRL-LOTW] RE: LOTW fees

That's a shame, since the Canadian IC data is publicly available and (I think) reliable, and the cost of mailing is certainly reasonable. Perhaps the postcard-mailing option will be extended to Canadian hams in the future.

73,
Jonathan K1RFD

I am surprised at the ongoing complaints about LOTW. In my humble
opinion, it is a helluva tool, and is a lot of fun.

So far I have seen 3 types of complaints:

1. Users that are unfamiliar with the PKI (public key infrastructure
process of authentication and get frustrated.

These I try to help.

2. Users that are unfamiliar with setting up a good security policy and
how difficult it is.

These I try to enlighten and help them understand why things are done
the way they are.

3. Those who have an agenda again ARRL, LoTW or both. These people use
logical fallacies
and sometimes even lies to promote their agenda.

These folks I try to shoot down with true logical and facts.

A suggestion, Dave: publish "the list" on the LOTW web site, in the rough order in which you plan to attack it. We understand that you have very limited resources. Knowing that something one cares about is "on the list" will eliminate a lot of frustration, even if that item is far down on the list.

143. RE: [ARRL-LOTW] Expalnation of how LOTW REALLY works?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-08 17:05:29 UTC
From: Patton, David NN1N
Topic: 129 Message: 143

I don't know what ARRL's reason for not allowing more than
one cert per call.

There can only be one certificate for each callsign over the same date. As Hamish, VK3SB pointed out, we don't want two certificates out there for the same call and date range (it can't happen anyway).

There are a couple of occurrences where we expect to issue certs for the same call, for different date ranges, to different people: Contest calls like VP2E, VP5B, PJ2T, etc. That's why we stress the importance of not guessing on the start and end dates when one makes a certificate request.

I can think of good reasons to have more than one
cert. ie: QSL managers. I would not want to give a QSL manager my
private key, but I would be willing to digitally sign a certreq for him
to be a QSL manager. To me this would be the best of both worlds if the
QSL manager also had to sign the certreq, then if there was any question
about fraud then they would know who signed the tQSL.

Yep, QSL managers can obtain certificates for the calls they manage, and definitely they must sign those requests with their own certs. ARRL also wants to see a letter of authorization, sent via postal mail from the client station, that says the manager is OK to put data in the system.

Keep in mind something like the LoTW has never been done before and it
may lead the way for a whole new form of ID based upon digital
signatures. This project has been public for less than a month and there
is going
to be problems here and there. In a year things will have changed, what
I don't know, but I am sure they will.

RR Darryl. You've done a FB job with the email--thanks for the help.

> Herzegovina?

I can't speak for what the ARRL would do, but if it was me and
it came from any country other than the one that issued the
license it would be a problem. This should be a case by case
bases. If you lived close to 2 country and was applying for
2 certs in each and the postmark was from one of them that would
fly. If it had a France or US postmark and was for Nigeria more
documentation would have to be provided as proof of the Nigeria
call.

> BTW, I got the famous Nigerian letter by mail the other day
> (with nice Nigerian stamps on it) but still do not believe to
> the letter inside...

True enough, but you didn't question if it came from Nigeria did
you? The postmark doesn't show proof of anything except where
it came from, but that is an important data point in the authentication
process, but not the only one.

Hope this helps.

Subject: RE: [ARRL-LOTW] Expalnation of how LOTW REALLY works?

Greeting Dave and the group,

I don't know what ARRL's reason for not allowing more than
one cert per call.

There can only be one certificate for each callsign over the same date. As Hamish, VK3SB pointed out, we don't want two certificates out there for the same call and date range (it can't happen anyway).

There are a couple of occurrences where we expect to issue certs for the same call, for different date ranges, to different people: Contest calls like VP2E, VP5B, PJ2T, etc. That's why we stress the importance of not guessing on the start and end dates when one makes a certificate request.

I can think of good reasons to have more than one
cert. ie: QSL managers. I would not want to give a QSL manager my private key, but I would be willing to digitally sign a certreq for him to be a QSL manager. To me this would be the best of both worlds if the QSL manager also had to sign the certreq, then if there was any question about fraud then they would know who signed the tQSL.

Yep, QSL managers can obtain certificates for the calls they manage, and definitely they must sign those requests with their own certs. ARRL also wants to see a letter of authorization, sent via postal mail from the client station, that says the manager is OK to put data in the system.

I understand that to mean that in lew of the call sign owner getting a cert the QSL manager would get
a cert. Is that true?

It would seem that having overlapping certs issued to different people would increase accountable
to the tQSLs. For example my club N1FD holds a modest Field Day (15-25 Alpha) ;-) every year
which means we have from 10-20 station masters each year. If we only have one cert then the
accountability stops at the person holding that cert. If on the other hand each station master
had a cert to sign their own logs, then accountability would be down to

the station master level, but
it sounds like there may be business logic that would prevent this.

Thanks for input.

147. LOTW requirements for accepting Satellite QSOs?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-08 18:33:08 UTC
From: Dave Bernstein
Topic: 147 Message: 147

Empirical evidence indicates that LOTW requires the presence of
certain fields in Satellite QSOs, but pinning down exactly which ones
has yielded inconsistent results:

W5UHQ reports that he had to manually add BAND_RX fields to his
satellite QSOs before TQSL would accept them; see
http://groups.yahoo.com/group/dxlab/message/9149

K1ICO reports that TQSL rejected his QSOs containing BAND_RX fields;
see http://groups.yahoo.com/group/ARRL-LOTW/message/67

WB0WAO reports that TQSL will accept QSOs containing a SAT_NAME tag
with a PROP_MODE tag whose value is set to SAT, whether or not a
BAND_RX tag is present; see
http://groups.yahoo.com/group/dxlab/message/9409

Is there documentation that makes LOTW's Satellite QSO requirements
explicit?

73,

Dave, AA6YQ

148. RE: [ARRL-LOTW] Expalnation of how LOTW REALLY works?

With respect to #1 and #2, Darryl, you are missing the forest for the trees. LOTW's decision to utilize PKI and enforce a strong security policy is fine. The fact that users must understand the details of these things in order to effectively use LOTW is a serious problem. You are correct in asserting that credit card companies apply as much, if not more security -- but they do so in a manner that is invisible to users. The fact that you must remind credit card users that this security is in place illustrates just how invisibly that security has been implemented.

Constructively, the question is "how can the LOTW design be evolved to hide the complexity of its security infrastructure from its users?".

149. Re: [ARRL-LOTW] Expalnation of how LOTW REALLY works?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-08 18:57:37 UTC
From: Nenad Stevanovic
Topic: 129 Message: 149
Attachments: 2 described; binary payloads are missing from this source WARC

Dave,

Use of special prefixes is common in VE. On top I organize
local expeditions all within single 'entity'=VE.

VE3EXY (home location Ottawa)
VE3EXY/2 (CQ zone 2, Quebec=VE2)
CK2/VE3EXY/p (IOTA NA-128)

more to come ....

I understand I need one certificate for each special prefix
/call, otherwise I will not be able to make my logs available
for special_px/ portable operations through LoTW.

Obviously, I would like them all to feed one single Award 'account'
which I probably can do through award application form (quote another
calls used), rather than through LoTW itself.

In return,LoTW would, calculate credits independently, for
each certificate. Correct?

QSL managers, multiple individuals using the same contest call,
visiting operators, and QSL card printers (as defined in article
http://www.magma.ca/~ve3exy/new_lotw.html) will be the other
cases where multiple certificates are needed . Most likely
on the same machine.

73 Nenad VE3EXY ...

To: ARRL-LOTW@yahoogroups.com
Subject: RE: [ARRL-LOTW] Expalnation of how LOTW REALLY works?

With respect to #1 and #2, Darryl, you are missing the forest for the
trees.

What every.

LOTW's decision to utilize PKI and enforce a strong security policy is
fine. The fact that users must understand the details of these things in
order to effectively use LOTW is a serious problem.

You are correct in asserting that credit card companies apply as much,
if not more security -- but they do so in a manner that is invisible to
users. The fact that you must remind credit card users that this
security is in place illustrates just how invisibly that security has
been implemented.

They have the advantage that they have a trusted third party (the
merchant) to provide the invisibility to the
end user. LoTW doesn't have that third party support.

Constructively, the question is "how can the LOTW design be evolved to
hide the complexity of its security infrastructure from its users?".

What part of the complexity would you like to be hidden? There are two
parts which are complex:

1. The original authentication of the user.
This is going to be hard to make less complex because it is more
less a manual process to
begin with. It is a process which means that things have to
happen in a given order. IE:

(create a public key pair, a cert req, then the cert req must be
sent to the CA(ARRL), then the
CA must authenticate the cert req, then the cert is sent back to
the user. Each on of these
steps are out of band transactions.

That is the bad news. The good news is if you don't let your
cert expire, then you don't have
to do it again.

2. Signing the QSO.

Tqsl was never meant to be the end product. It is a stop gap
until logbook authors can add
support to their logbook programs. A Trusted logbook should be
able to create certreq, store
certs, sign QSO, email tQSL to ARRL and track which QSO have
been submitted to LoTW.
This would allow users to submit any outstanding QSO to LoTW
with a simple click of a
button and maybe a password.

So things will get better when logbook authors add TrustedQSL
support to their products.

I hope that ARRL will provide a way to download confirmed QSLs,
so that logbook programs
can keep track of which contacts are confirmed.

So the design to hide the details is really there, it is now in the
logbook authors hands to make it
work friendly which I have faith they will do.

>>>AA6YQ comment below

You are correct in asserting that credit card companies apply as much, if not more security -- but they do so in a manner that is invisible to users. The fact that you must remind credit card users that this security is in place illustrates just how invisibly that security has been implemented.

Darryl> They have the advantage that they have a trusted third party (the merchant) to provide the invisibility to the end user. LoTW doesn't have that third party support.

>>> When I use my credit card to purchase merchandise over the web, the security infrastructure does not become visible. There is nothing that credit card companies do to hide complexity that LOTW couldn't also do.

Constructively, the question is "how can the LOTW design be evolved to hide the complexity of its security infrastructure from its users?".

Darryl> What part of the complexity would you like to be hidden?

>>>All of it. This should have been an A-level requirement for the entire project.

Darryl>

There are two parts which are complex:

1. The original authentication of the user.

This is going to be hard to make less complex because it is more less a manual process to begin with. It is a process which means that things have to happen in a given order. IE: (create a public key pair, a cert req, then the cert req must be sent to the CA(ARRL), then the CA must authenticate the cert req, then the cert is sent back to the user. Each on of these steps are out of band transactions.

That is the bad news. The good news is if you don't let your cert expire, then you don't have to do it again.

>>>All of this can be completely automated, including the handling of all error cases. A key benefit of PKI is that the bits can be sent over the internet without compromising security. And since LOTW is useless without an internet connection, one can assume that every user can run applications with realtime access to the internet. Is

there work involved in realizing this automation? Wes. Is it difficult? No. Add up the hours that users will spend fighting with the system as currently implemented and it dwarfs the effort required to correct it -- and that's ignoring the effects of bad will.

Darryl>

2. Signing the QSO.

Tqsl was never meant to be the end product. It is a stop gap until logbook authors can add support to their logbook programs. A Trusted logbook should be able to create certreq, store certs, sign QSO, email tQSL to ARRL and track which QSO have been submitted to LoTW. This would allow users to submit any outstanding QSO to LoTW with a simple click of a button and maybe a password.

So things will get better when logbook authors add TrustedQSL support to their products.

>>>This won't happen until LOTW publishes a documented set of programmatic interfaces. Throwing the TQSL source code into SourceForge does not constitute a documented, stable interface, as I'm sure you know. I'll have support in DXKeeper (the DXLab logging application) within hours of such an interface being available, as I did for eQSL.cc. Blaming all this user-visible complexity on logging application developers -- who've been requesting a documented API for more than a year -- is ludicrous and frankly infuriating.

Darryl>

I hope that ARRL will provide a way to download confirmed QSLs, so that logbook programs can keep track of which contacts are confirmed.

So the design to hide the details is really there, it is now in the logbook authors hands to make it work friendly which I have faith they will do.

>>>So support by logging application developers is essential to providing users with a reasonable interface to LOTW? If that's the case, why was LOTW designed without review by logging application developers? Why were logging application developers precluded from the alpha testing, despite repeated and acknowledged suggestions that this was the perfect opportunity to design, implement, and verify interoperability? Why is there still no stable interface specification that logging application developers can use to interoperate with LOTW?

C'mon men!!

Instead of sitting around belly-aching about the system, we could be uploading files. I'm having to enter all of my log data as until only recently did I start to use electronic logging. I have a 1.76% confirmation rate(one DX confirmation out of 15 total), but I'm having a ball with this system. Make it work for all of us, and I'm confident that the system will steadily improve. Now go upload some files!

Really tell me how to automate the check copies of licenses and
government ids?

I won't say anything about the state of the documentation of the API
because I haven't looked at it. I would expect some docs, but not
a 100 page book. It isn't that complex. Assuming that there is
enough for logbook authors to code to which I think there is, then
it is really in the laps of those authors to make the user side flow
smooth. I think LoTW needs a few hooks into the server to collect the
same data as the web pages, otherwise I think they are where they should
be.

Subject: Re: [ARRL-LOTW] getting a UK club certificate

James, don't you have Trustees for your Club stations as we do here in States. Think your cert would be keyed on the trustee so you would submit copy of club license plus ID info on trustee.

Sent: Sunday, October 05, 2003 1:11 PM
Subject: RE: [ARRL-LOTW] getting a UK club certificate

Thanks for the comments Darryl

I agree about signing a cert req with a trusted cert an perhaps they will let us do that, but as far as I know the UK certs have to be applied for by post as our call signs can't be checked against the FCC database.

Subject: RE: [ARRL-LOTW] getting a UK club certificate

Hi,

I don't speak for ARRL and I don't know there official policy, but I got a cert for both my Boy Scout club
station and a special event call (N1H) based on my own station cert.

The concept is that if one
sign a certreq with a cert then that is trusted, just like the
TrustedQSL they are trusted. Therefore
if one sign a bogus certreq they have committed fraud and all their
certs may be revoked if discovered.

If you is going to commit fraud you don't leave a trail positively
identifying you as the person committing
fraud.

Hope this helps

With respect to #1 and #2, Darryl, you are missing the forest for the trees. LOTW's decision to utilize PKI and enforce a strong security policy is fine. The fact that users must understand the details of these things in order to effectively use LOTW is a serious problem.

I use Hyperlog. It exported an ADIF file which uploaded over 25,000 QSO's perfectly to LoTW.

What is your point? User are the ones being authenticated, therefore
it has to be visible to them. So I ask again how do you do that
when user interaction is required? And please do give me that
snake oil answer of it should have been designed better.

To be honest, I haven't had the time or the energy because I had been
working outside my field, so by the time I got home I was so wiped
that I couldn't be productive. No one really knows just how much
a regret not being an active part of the TrustedQSL project. I will
look at the code soon. I would like to do a native Java port.

Really programmers don't need docs if they have source. ;-)

No one is saying that LOTW never works, Hans, or that every operation is difficult to use. The problem is that when users step off the primrose path -- by accident, due to network glitches, or whatever -- recovery is very complicated and in some cases apparently impossible without divine intervention. If you've been monitoring the messages here and on other reflectors, you already know that.

An application that works well 90% of the time is going to have a lot of people like you saying "It works fine for me". The problem is that 10% of the intended LOTW user community is a very big number. Software like LOTW has to work well in *all* cases, not just the common ones. Like the programmatic interface issue you and I were discussing earlier, this is an architectural issue. Waiting till after production release to verify that all user scenarios have been supported is very risky business. There is a whole branch of modern software engineering aimed at preventing this very problem.

Users who take the position "since it works for me, it must be good enough" in the face of difficulties being expressed by other users are doing everyone a disservice. If users don't demand high quality software, they will rarely get it.

I asserted that all of this complexity could be hidden from users.
You disagreed, citing license and ID verification as tasks that could
not be automated. My point is that users don't perform the tasks you
cited; thus they do not substantiate your argument.

If you want to rebut the original assertion, show why user awareness
of and management of security artifacts -- multiple passwords,
certificates, URLs, etc. -- can't be automated into user invisibility.

As for "Really programmers don't need docs if they have source.",
I'll assume you're joking. Personally, I don't find the situation
amusing...

Users need to be aware that their private key needs to be backed up.
The private key is never shared and thus can't be stored by the ARRL in
case you lose it.

Dan,

I've used Dxbase by Scientific Solutions since the DOS days. It's been Windows driven since the Windows 3.1 days so they're cutting edge in compatibility. They built the new version 'Dxbase 2004' with LOTW compatibilities.
Here's they're web address. http://www.dxbase.com

I need a good logging program.
What is the best one to use with LOTW?
All my logs is on paper so time to start typing in my logs.

Thanks

Of course they do. They have to provide those items which are required
for authentication.

> If you want to rebut the original assertion, show why user awareness
> of and management of security artifacts -- multiple passwords,
> certificates, URLs, etc. -- can't be automated into user invisibility.

Sure it can. That is the job of logbook authors. ARRL has provided the
API for which this can be done. As far as multiple passwords even you
would agree that the web site needs passwords. The private key the way
I understand it doesn't require a password. What's the big deal?

> As for "Really programmers don't need docs if they have source.",
> I'll assume you're joking. Personally, I don't find the situation
> amusing...

Of course I was joking. That is why I put the ;-). On the other side
I have been on projects that overly documented. I think the best of
both
worlds is the Javadoc concept and XP. No, it shouldn't be the only
docs.

Not ever API is going to have complete docs. Some of the best apis that
I
have used had very little docs. I would much rather have no docs than
bad docs.

In the tQSL program you can add many locations per call. When
you sign the log it will prompt you for which location. The trick
is trying to get a log only for those QSO.

Good luck & 73

I certainly have to agree with Dave about all of this.

The source issue is especially a sore point. Making the source available is not an API documentation. The source can change , even if it can be understood, and the API should not. As much as I would like to see DXKEEPER automate the process I fully support Dave. He should not do it until a stable clear , well defined interface is published, one that is guaranteed not to change without a compelling reason.

Gee Dave,
Dave,

I just looked at the "no documentation" and found it to
be quite complete. If you can't support LoTW with that
amount of docs, then maybe you shouldn't be writing programs.

I guess I should put the docs up on the TrustedQSL web site.

AND they need to be told how to do that. They need to be told where it is
stored and how to reinstall it if something goes really wrong. The private
key is the whole secret to PKI and it is not well emphasized anywhere.

Yes, I understand, Hans. If it works for you, everyone else's problems are molehills, and undeserving of attention.

I didn't disagree, I just didn't know what the state of the
API documentation was in. I have just briefly looked at
it and I see that ARRL has elected to use Doxygen which is
like JavaDoc. This is great! I would say that he has
that guarantee.

Mailing your amateur radio license to the ARRL is no different than mailing in a credit card application. No one has argued that this part of the process needs improvement.

The issue, which you continue to duck, is that users are forced to maintain multiple passwords, understand the ins and outs of certificates and PKI, and know how to put things back on track when they come off the rails. You yourself posted several messages explaining this esoterica to users in need. When challenged, you argued that concealing this "would be hard", but have failed to provide any substantiation of this position.

As for your assertion below that "ARRL has provided the API for which this can be done.", after I've repeatedly asserted that there is no such API, I will simply ask you to produce a URL to this API.

I totally agree! I do remember a message saying that I should
store my cert on a offline media, but I agree that it should be
stressed more.

ARRL have not provided an API, only non-final source code.
Further, ARRL have not provided any documentation (or any
means) so far as anyone can tell for the user to download
QSL status into his logging program in order to track LotW
submissions/QSLs. Similarly, ARRL have not as yet provided
the slightest information on linking a user's certificate
to the logging program to allow a signed ADIF file (.tq8)
to be generated seamlessly (and invisibly) to the user.

> The private key the way I understand it doesn't require a
> password. What's the big deal?

The private key, the way it is implemented in tQSL, requires
a password. The password problems in the initial public release
(tQSL 1.06) of the software resulted in the loss of my original
certificate. That loss required the issuance of a superceding
certificate (since I had already uploaded logs) that was only
accomplished by human intervention (with much difficulty since
no procedure had been developed for that eventuality).

The LotW project is/was an overdue idea but the implementation
has been slipshod at best. Ease of use, the user interface and
documentation should be given failing grades. Software
integration and interoperability simply does not exist. Even
the user documentation is woefully lacking ... there should
have been a much higher level of promotion and preparation
(including articles in QST and on the web with detailed
instruction for use) and the software should at the very minimum,
have many more warnings about backing up private keys and
certificates.

That is not true. There is an API with docs on sourceforge.com.
The provide source and DLL. The API docs are in HTML format.

If you don't wish to dig for them I have just upload the API
docs to http://www.trustedQSL.org/api. Maybe now we can put
this nonsense about no API docs to rest.

Not true see above.

I stand corrected. At least I can remove password protection
from my private key.

Getting a new cert for a lost private key should not be easy and
should require human intervention because there is no way to
authenticate the user.

Nothing like this has every been done. It is still a learning
process.

No, I think revocation and related parts of key management should be a
manual process to prevent fraud. A once off delay of a few days is not
going to end the world, frankly.

> If the key has a STRONG pass phrase I can give it to you and you
> still cannot impersonate me.

Perhaps. I've heard that typically the passphrases are not encrypted
particularly strongly, so I could use a brute-force attack to obtain
your key. You wouldn't want to risk it deliberately.

It has always been in sourceforge, but you can now view it on
http://www.trustedQSL.org/api

It isn't the best API docs I have seen, but it is also far from
the worst.

Not true, the password may be blank.

That doesn't help you if you then lose the whole private key.

> The LotW project is/was an overdue idea but the implementation
> has been slipshod at best. Ease of use, the user interface and

I see the current software as the underlying infrastructure (the web site and the tqsllib library), and a demonstration/proof application (tqslcert). It is obvious throughout the documentation that they expect the tqslcert functions to be integrated into third-party logging applications. (Although it seems that the documentation to do that may not exist yet.)

In light of that I think most of your criticism is unfair. Integration into logging apps is the third party's responsibility and will happen over time. The tqslcert is enough to get things going for now but isn't polished nor integrated.

I used the beta software and web site and found it quite satisfactory for what it was. I haven't seen the production web site yet as I am still waiting for registration.

There are some cryptography links from the TQSL web site:
http://www.trustedqsl.org/

What you uploaded certainly calls itself an API. Without some study, I can't tell whether its an API or just the collected procedure declarations from each module in the source code. I will uploaded it to my laptop and review it during tomorrow's flight.

Nothing would make me happier than finding this to be the foundation upon which interoperation with logging applications can be built.

193. LOTW API, or lack thereof

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-09 05:51:01 UTC
From: Dave Bernstein
Topic: 129 Message: 193

Well, Darryl, it didn't take long to discover that this API you posted is nothing but every member of every .h file in LOTW (other than the one defining error constants and the one providing a line of documentation for each of the 7 modules).

There is no abstraction whatsoever is this collection. There is no way for logging application developers to separate stable architectural interfaces from interfaces intended solely for use within the implementation, which one would expect to change frequently over the coming releases. I very much doubt that LOTW project management has committed to maintain upward compatibility for every one of those declarations, as would be the case if this were truly LOTW's API.

Lobbing source code over the wall is not an API, and you know it. Or at least, you should know it.

73,

Dave, AA6YQ

I would suggest the most versatile and flexible program I have used is
LOGic <www.hosenose.com>
I have used it since the DOS days and it will track anything you can think
of. The cost is reasonable and support is very good from the manufacturer
and also a very good Listserver (reflector).

For a free program I would suggest Lux-Log <http://www.qsl.net/lx1no>. This
is a very comprehensive program and Norby supports this program very well.

Both easily export to ADIF.

Come on now. Have you seen the programs he has written? He could write a program easily with what is there, but he won't because it may change. This is not an API and until there is one Dave is talking the correct path here.

I didn't say that it was great, but they follow the same format as
OpenSSL and Sun's Java API. Errors are reported by calling a
function upon an error return.

> There is no abstraction whatsoever is this collection. There is no
> way for logging application developers to separate stable
> architectural interfaces from interfaces intended solely for use

This is where you are totally wrong. You don't see any separation of
public interface from internal because they don't expose the internal.
All of those functions are the public API. In fact some of the API
code is written in C++ there is no C++ methods in the public API. I
believe
that each of the functions in the API docs was exposed as part of the
public API. I have checked everyone of them and no one on the project
told me that so I don't know for sure.

> Lobbing source code over the wall is not an API, and you know it. Or
> at least, you should know it.

I know what I have seen is enough for me to use the API and that Sun
JAVA API docs looks very much like I have seen here. This package has
another feature that I would have killed for on many of the APIs I have
worked with: A working example program.

I can understand that you may feel more documentation needs to be done.
There is a easy solution. This is an open source project and all
contributors
are welcome. So I invite you to bring up the docs to an acceptable

standard.
If you don't want to do that or you don't have time, then I guess you
will
have to wait until someone else who feels like you do takes the time to
bring it up to your standard. You may have a log wait.

You might also say that doing the docs is my job or the job of ARRL.

My response is that ARRL have provided a working set of docs and the
source code. As far as myself while it is true I started TrustedQSL
I wasn't able to stay active with the project for personal reseasons
and I am not (at least yet a logbook developer). My interest in
LoTW/TrustedQSL
was to make sure it's design was something that the world could live
with.
It is, so I no longer have a vested interest TrustedQSL or LoTW except
as
a user. You and other logbook developers on the other hand do have a
vested
interest in the TrustedQSL API.

I guess what I am trying to say is if you don't like they way things are
change them or shut up.

Greetings,

> Come on now. Have you seen the programs he has written?

Yes I have and I wasn't impressed.

> He
> could write a program easily with what is there, but he won't
> because it may change.

Of course it may change. Take a look at the Java Docs and see
how many methods are deprecated.

Beside Dave was first complaining that there was no docs, now
he is complaining that it may change and doesn't look stable.
This is after all an open source project. He is free to join
the project and work improve the docs and make it more stable.

Any API is only going to be consider stable after years of uses
this API is very complex (which may be where the problem is) and
you can not set down and understand it in 5 mins.

> This is not an API and until there is one Dave is talking the correct
path here.

Oh, so it isn't an API until Dave says it an API. I don't think so!
I will admin that the docs for the API maybe a little terse, but it
is really a wrapper for OpenSSL. If you want the theory behind it go
to the www.openSSL.org site.

Dave is the only developer that has been complaining about the docs.

198. Re: County Line QSOs are considered dupes!

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-09 14:29:39 UTC
From: nj2dx
Topic: 112 Message: 198

Jim,

I did some experiments with an ADIF file that had a county line
contac and change the seconds between the two contacts with one
having 00 seconds and the other 59 seconds of the same minute and the
results of processing the .tq8 file is that the second one even 59
seconds later is considered a duplicate.

I even went into the LoTW QSO screen and checked on the QSO and only
one is listed. The only way to get both QSOs in is to have the
minutes in the ADIF file be different.

In checking the data I uploaded I see that even though the seconds
are in the ADIF they are stripped because the QSO records on the LoTW
web site always has 00 for seconds.

So the only way to handle boundry (county, state, grid) contacts
would be to have two QSOs for different stations (locations) AND the
time has to be at least a minute a part.

My guess is they did this so you could override a wrong location by
changing it and re-uploading it. However not sure why they strip
seconds off unless they thought that would reduce the amount of data.

I hate to have my logbook lie about the time even if it's only off by
one minute. However it makes me wonder how since QSOs are reconciled
over a period of 30 minutes how it will match up these QSOs to get a
QSL for both...

N3FJP's programs are very well made. Yes, he does charge a small registration fee, but, for under $50, you can get his CD of ALL his programs, for just about every contest there is. Even a Field Day logging program that can network several computers for multiple radio use. Any updates, no charge. I have lost my passwords and he was able to email me my passwords.

Just my $.02.

Tom, that has not been my experience. I can go to the ARRL LoTW web site and look at my QSOs, and I see many county line QSOs where the time differs by mere seconds.

When you added the seconds to the ADIF file, did you expand the field width from :4 to :6? Are you sure you signed the modified ADIF file and not the original? It may be that once you upload a QSO with 4-digit time, that you can NOT over-ride those QSOs in the system. You should contact lotw-help@... to see if this is the case.

201. Uploading amendments to LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-09 15:55:46 UTC
From: David Gynn
Topic: 201 Message: 201

Gentlemen

These questions may have been discussed before but as I have just joined this group can anyone tell me:-

1: Can one amend a QSO record already accepted by LOTW ? Small error crept in to one of my records being shown as a CW contact rather than a RTTY ? I get the impression if one sends an amended QSO record LOTW rejects it as a duplicate.

2: Does anyone from the ARRL-LOTW team monitor this group ?

Many Thanks

Dave (G3SBP)

I've amended some qso's. I got this in response:

2003-10-07 01:43:14 LOTW_QSO: WARNING: QSO replaces existing record
2003-10-07 01:43:14 LOTW_QSO: QSO: K6LL LW1DIP 1994-12-10 00:03:00Z
10M SSB

So, it looks like the new data overwrites the old.

Try it and see.

Hi Daves!

the system only replaces the QSO if all the info is exactly the same. This is so that you could change your grid square, or county, etc., and attach that to the same data.

But, the below isn't a big problem because the other station would not get a match to your CW QSO, but would get a match to the correct RTTY. You're the only one who knows the CW QSO is there.

205. LOTW QSO query

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-09 16:58:53 UTC
From: Phil Cooper
Topic: 205 Message: 205

Hi all,

I recently saw a post from N4HY who suggested that the State was easy to see
in each QSO confirmation.
Two things arise from this:
1, you have to click on each confirmed QSO to SEE that data, and while that
may be reasonable for a few contacts, I now have almost 1000 confirmations,
and that would be rather long-winded.

2, Not all confirmations seem to show the State!
Here is what I mean..... (callsigns removced to protect the innocent!)
This is the first, and DOES show the State:
Station
Call Sign GU0SUP
DXCC GUERNSEY
IOTA EU-114
Grid IN89RL
Worked Station
Worked AB1AB
DXCC UNITED STATES OF AMERICA (291)
Grid EM72
State AL
County LEE
Date/Time 2001-11-11 17:43:00
Mode RTTY (DATA)
Band 15M
Frequency 21.00000
QSL 2003-10-09 00:16:17

Record ID 9558146 Received: 2003-10-06 12:22:40
==========

This is another confirmed record, and it does not show as much info:
Station
Call Sign GU0SUP
DXCC GUERNSEY
IOTA EU-114
Grid IN89RL
Worked Station
Worked A8AAA
DXCC UNITED STATES OF AMERICA (291)
Date/Time 2003-02-08 13:35:02
Mode RTTY (DATA)
Band 15M
Frequency 21.066
QSL 2003-10-08 23:06:38

Record ID 9564888 Received: 2003-10-06 12:24:24
==========

ie, there is no GRID/STATE/COUNTY shown, and yes, it IS a USA callsign.

Is there a reason as to why this data is missing? I guess all will become clear in time, but I did think that it may be better to sort any minor problems sooner rather than later.

73 for now
Phil GU0SUP

This is because the US station didn't put state/county/zone/grid data in
their location definition. I'd suggest a polite email to the station
requesting they add the information to their location file and then download
the same files again. This will correct the information.

Subject: [ARRL-LOTW] LOTW QSO query

Hi all,

I recently saw a post from N4HY who suggested that the State was easy to see
in each QSO confirmation.
Two things arise from this:
1, you have to click on each confirmed QSO to SEE that data, and while that
may be reasonable for a few contacts, I now have almost 1000 confirmations,
and that would be rather long-winded.

2, Not all confirmations seem to show the State!
Here is what I mean..... (callsigns removced to protect the innocent!)
This is the first, and DOES show the State:
Station
Call Sign   GU0SUP
DXCC   GUERNSEY
IOTA   EU-114
Grid   IN89RL
Worked Station
Worked   AB1AB
DXCC   UNITED STATES OF AMERICA (291)
Grid   EM72
State   AL
County   LEE
Date/Time   2001-11-11 17:43:00
Mode   RTTY (DATA)
Band   15M
Frequency   21.00000
QSL   2003-10-09 00:16:17

Record ID 9558146 Received: 2003-10-06 12:22:40
=======================================

This is another confirmed record, and it does not show as much info:
Station
Call Sign   GU0SUP
DXCC   GUERNSEY
IOTA   EU-114
Grid   IN89RL
Worked Station
Worked   A8AAA
DXCC   UNITED STATES OF AMERICA (291)
Date/Time   2003-02-08 13:35:02
Mode   RTTY (DATA)
Band   15M
Frequency   21.066
QSL   2003-10-08 23:06:38

Record ID 9564888 Received: 2003-10-06 12:24:24
==========

ie, there is no GRID/STATE/COUNTY shown, and yes, it IS a USA callsign.

Is there a reason as to why this data is missing? I guess all will become clear in time, but I did think that it may be better to sort any minor problems sooner rather than later.

73 for now
Phil GU0SUP

207. RE: [ARRL-LOTW] Uploading amendments to LOTW

Subject: RE: [ARRL-LOTW] Uploading amendments to LOTW

Hi Daves!

the system only replaces the QSO if all the info is exactly the same. This is so that you could change your grid square, or county, etc., and attach that to the same data.

But, the below isn't a big problem because the other station would not get a match to your CW QSO, but would get a match to the correct RTTY. You're the only one who knows the CW QSO is there.

73, Dave, NN1N @ ARRL

The ITU prefix allocation list shows A8A - A8Z as being allocated to
the Republic of Liberia.

That would explain the absence of a state, but it doesn't explain why
the DXCC name is United States of America. It seems _that_ is the
real error, not the absence of a state.

Hi all,

OK, hands up, A8AAA was NOT a good choice for a psuedonym for an American call.

However, I did state that calls had been changed to protect the innocent, and I also said that it WAS an American callsign.

Thanks to those who responded!

211. Station Location problems with multiple Callsigns

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-09 21:25:49 UTC
From: R Johnson
Topic: 211 Message: 211

Hi:
I have 3 callsigns K1VU, WA1OFR,& WN1OFR and a certificate for each.

When I go to TQSL/STATION/ADD LOCATION (or edit location) and try to
set the following locations:
K1VU - Home
WA1OFR - Home
WN1OFR - Home
I run into a problem! When I add WA1OFR - Home it overwrites K1VU -Home.

What I end up having to do is set the location to a unique name.
I had to settle for:
K1VU - Home
WA1OFR - Hom
WN1OFR - Ho
In order to get the correct setup.

Eventually I wanted to have:
K1VU - Home
K1VU - Camp
K1VU - Rover
WA1OFR - Home
WA1OFR - Camp
WA1OFR - Rover
WN1OFR - Home

Anyone else run into this problem ???

TNX es 73

Yes. Apparently the locations must be unique. What I did was:
K6LL - K6LL - YUMA
K6LL/7 - K6LL/7 - YUMA
K6LL - K6LL - IMPERIAL
KZ7X - KZ7X - YUMA

It looks a little funny, with the callsign repeated, but it works.

I had that problem and solved it by naming the locations Home (K0CA), Home (KI0W), Home (N0BQN), Home (KA0EZR). The names TQSL shows are a little redundant, e.g. K0CA-Home (K0CA), etc. But it works.

The solution if you can call it a solution is to name them something
like:

K1VU - Home-K1VU
WA1OFR - Home-WA1OFR
...

The names have to be unique.

good luck and 73

As Dave K6LL pointed out, the granularity of the location need be no smaller than a grid square or county. I have used AD1C from Lincoln, MA (K1VR) and Tewksbury, MA (KC1XX) as well as my home station in Chelmsford, MA. These are all in same county and grid square. Thus, I only need to use one location.

Attachments: 1 described; binary payloads are missing from this source WARC

Just type it in the way you want to get it, Bob: K1VU Home, K1VU Camp, etc. It will work nicely.

Couldn't find any good information about it in the help files when I did this, but maybe the info has been updated now. If it's not then it should be asap.

I ended up inputting "K5WW Home" and "KB2RRV Home"; works just fine.

If there is a sincere and committed effort to engineer and then
document an effective API for LOTW, I am more than happy to
participate and contribute.

Improving the documentation of LOTW's source code in attempt to pass
it off as an LOTW API would be a complete waste of time. No thanks.

If you really believe that the material you posted constitutes a
reasonable API, then I suggest some reading on the topics of
abstraction, modularity, and encapsulation in software architectures.

73,

Dave, AA6YQ

Hello Dave,
Its hard to tell from the tone of your postings whether you really
want to crack the API or complain about it. I agree that the "API"
such as it is, requires some investment on the part of the programmer
to make sense out of, and that similar API's published by Microsoft
and other big vendors are better documented and take less effort to
understand.

But I am willing to understand that the vendor in this case is not
Microsoft and I have a choice: I can ignore it and work on something
else, or I can do what it takes to make it work.

My technique for such projects--you can take it or leave it--is to
read what I can for a while and then put it away for a day or two
when I get frustrated.

By the way, I have taught software architecture to dozens of
professional programmers over the last 5 years, and used it
for 20 more. I probably wouldn't have designed the TrustedQSL
API the way it is, but its not beyond my capacity to learn it,
and I am quite sure than any of my trainees could pick it up
in a few days.

I think part of the problem is that there is no promise that the current API is cast is stone. By that I mean that new things can be added but it must be true that anything that works now will continue to do so without change. Without this promise it is really hard to decide if it is worthwhile to spend your item with it.
An abstract API definition that does not use a simple toss the source over the wall is much more likely to be believed as a true promise of what the code does and will do.

It is unbelievable how much effort went in to IBM System 38 and AS400 APIs to fulfill this promise. TI is hard , it may lead to something that is supported that on hindsight could have been done better, BUT, it lease to confidence of users and happiness of users and that is one of the most important things a piece of software can do.

Now you can argue that yes, IBM did it but they are a huge entity and can do it. That is not valid as the complexity of OS400 is many millions of times greater and therefore the percentage of effort expended was just as great as LOTW would be.

Hm... Have you actually looked at the API and the deployment mechanism
for the TrustedQSL dll's, Gil?

If you want to use that as a reason not to add LOTW support in your
product, then that's your choice. Nobody loses but you if you
happen to be mistaken.

Greetings,

Dave and the group,

I have address all of your points here most of which were logical fallacies one sort or another. For those have stuck with this thread as Dave promotes some agenda to discredit ARRL's LoTW and Trusted API I will do a short executive summary:

1. There is an API with source code.
2. There is docs for the API (over 300k of docs)
3. There is a product example using this API which has created over 11 million TrustedQSL records.
4. TrustedQSL is an Open Source project. If Dave or anyone else is unhappy with the docs or code they are welcome to help improve it or even make a better product provided they follow
the GNU Lesser General Public License.

Dave has been throwing rocks at this project since it began. Most of it around what he calls a lack of documentation. In the last few days he first claimed there was no docs. I found them and then he claims that it isn't enough. I suggested that this is an open source project we would welcome his help to improve them. He blow it off by saying "Improving the documentation of LOTW's source code in attempt to pass it off as an LOTW API would be a complete waste of time"

> If there is a sincere and committed effort to engineer and then
> document an effective API for LOTW, I am more than happy to
> participate and contribute.

Please tell us why you think the team that created TrustedQSL and LoTW wasn't sincere and committed. The engineering is done. It works. It is in production. There is no question about it. If you don't think so, then you are clueless about what an API is. Unless you can point out some design flaws I don't see any reason to change the code.

There is 300+k worth of docs for it. Yes they can be improved but it is an API.

Just for the record what was DXKeeper written in?

> Improving the documentation of LOTW's source code in attempt to pass
> it off as an LOTW API would be a complete waste of time. No thanks.

Somehow I knew you would say that. You say "to pass it off as an LoTW
API"
please give details why you claim that tqsllib isn't an API.

> If you really believe that the material you posted constitutes a
> reasonable API, then I suggest some reading on the topics of
> abstraction, modularity, and encapsulation in software architectures.

I see if I don't agree with you then I don't know what I am talking
about. This is really totally unconnected to the topic. Unless you
are now claiming that the code is flawed. If so please provide facts
so that corrective action can be taken. Please give details
how the API could be abstracted, modularized and encapsulated more
(all of these things have been done in the API) which will result in
an improvement of robustness and usability.

You should check out Extreme Programming(XP) explained. For small
projects
XP is a much better model than spending half or more of the time writing
documentation which always has to be changed after the product is done,
because
of things that wasn't thought about during the design.

The case that Dave is trying to make is if you can dazzle them with
brilliants
then baffle them with Bull*@#@

Topic: 129 Message: 222

Gil and the group,

Stone isn't always good. How much pain did it cause because
the 640k memory model was cast in stone. How much would the
world have saved in manpower and money if Microsoft had tossed
DOS out when the 386 hit the market. Programmers like
things cast in stone because it makes it easy for them.
Things change, we find better ways to do things. Do you
really want to tie the hands of the LoTW/TrustedQSL developers?
Having said that, I don't expect that the API is going to change
that much and if it does there will be backward support for
TrustedQSLs. That is because each QSO record has a version
number on it. This allows changes to be made and still
have it backwards compatible.

Keep in mind that TrustedQSL was built on top of OpenSSL
which has been fairly stable for years. If you invest your
time in support of TrustedQSL it won't be a waste. I don't
think anyone can promise you, that you won't have to change your code
to support new versions of the API, but I will bet in the
last two years some of your compiler/lib/windows API has changed.

If we are talking about big company, take Sun for example
created Java and if you look at their API docs
(which TrustedQSL looks very much like) you will see
methods and classes that are labeled deprecated. Things change
or die.

Casted in stone is a good goal, but IBM isn't the company
it could have been if there wasn't so many rocks holding
it down.

From: Dave Bernstein
Topic: 129 Message: 225

Wayne, it is certainly possible to use TrustedQSL "as is" to enable interoperation between LOTW and other applications. In my view, however, allowing the current set of module interfaces to become, defacto, the LOTW API will significantly limit LOTW's longterm prospects. Here are my reasons:

1. Because these interfaces fail to encapsulate the low-level implemenation details, LOTW developers will either be forced to forgo or limit subsequent, necessary changes to that implementation (in order to avoid "breaking" client applications that are dependent on these interfaces) or by making low level changes will force client applications to synchronize release schedules with LOTW to keep up with the incompatible interface changes. One of an API's fundamental objectives is to permit ncessary changes to the implementation while protecting the client applications from obsolescence; the current set of interfaces badly fails to achieve this objective.

2. No amount of documentation will ensure that client applications properly utilize the current low-level interfaces. This isn't a criticism of those writing the documentation. PKI and its application within TrustedQSL are complex; unambiguously specifying all of the constraints and dependencies in any natural language will be fraught with ambiguity and omission. The solution to problems like this is well-known: encapsulate the knowledge of experts within modules that have been verified to work correctly. In effect, hide the complexity from client applications whose authors, despite best efforts, will otherwise get it wrong. This requires a concise API whose members prevent the infrastructure from being utilized incorrectly. Again, the current set of interfaces badly fails to achieve the objective.

This thread began with Darryl's assertion that the user-visible complexity of LOTW's security infrastructure was inescapable. I disagreed, stating that this complexity could -- and should -- be automated into invisibility. Darryl then took a new position: "Sure it can. That is the job of logbook authors. ARRL has provided the API for which this can be done."

I've been suggesting for more than a year that LOTW create a high-level abstract API that encapsulates its functionality, thereby enabling an ecosystem of LOTW clients -- logging applications, awards programs, propagation analysis tools, etc. Instead of the LOTW team bearing all the load, many other developers would be able to add value around LOTW. The LOTW project personnel with whom I've discussed it seem to agree, but proceeded through alpha, beta, and production releases without including this capability. I'm sure they had their reasons; I just hope that when they finally get around to

it, the inevitable obstacles aren't so entrenched that they're
insurmountable.

Perhaps this will help you understand my reaction to Darryl's claim
that an appropriate API has been there all along, and why I believe
that declaring the current set of interfaces to be LOTW's API to an
exceptionally bad idea.

My only frustration in this matter is that LOTW's unique opportunity
to create a true "logbook of the world" is being placed at increasing
risk by the continuing absence of an appropriate API.

From: Dave Bernstein
Topic: 129 Message: 226

Darryl, if I weren't committed to making LOTW successful, I wouldn't be wasting my time with suggestions to improve it over these past months, nor would I be striving to provide first-class LOTW support in DXLab. Writing off engineering criticism as opposition may be convenient, but its dead wrong. An engineer's responsibility is to actively solicit and consider critique, not deflect it.

I don't know why its relevant, but to answer your question DXKeeper is written in Visual Basic 6.0 Professional, SP4. For those not familiar with it, DXKeeper is a full-function logging application built on a powerful database engine (Microsoft Jet), with support for QSL card/label generation, award tracking, and a real-time interface to eQSL.cc. DXKeeper is one of eight free applications that comprise the DXLab Suite; each of these applications can be run individually, but when run simulaneously they detect each other's presence and interoperate automatically. Other applications in the DXLab Suite provide transceiver control (Icom, Yaesu, Kenwood, TenTec, Elecraft, FlexRadio), rotator control, beam heading display, solar terminator computation and display, soundcard PSK31/PSK63/RTTY, realtime DX spot collection and analysis, propagation prediction and monitoring, and QSL route discovery. If you've used Pathfinder to find a QSL route, then you've used a part of DXLab.

DXKeeper provided support for LOTW within two days of LOTW's release to beta test; this support will be expanded as LOTW makes it practical to do. At this moment, I'm trying to ascertain LOTW's ADIF requirements for satellite QSOs so that DXKeeper can provide the appropriate automation [anybody know where this is documented?]. Besides a well-encapsulated, high-level interface to tqsllib, I've also requested a means by which logging applications can determine which uploaded QSOs have been accepted by LOTW, and which QSOs accepted by LOTW have been matched and should thus be flagged as "verified". I have on several occasions offered to help provide these mechanisms.

As to why I believe that declaring the tqsllib's interfaces to be LOTW's API would be an exceptionally bad idea, I will summarize the points made in my response to Wayne W5XD, posted earlier on this reflector:

1. These interfaces fail to protect their clients (e.g. logging applications) from the inevitable low-level implementation changes required by LOTW's evolution; either LOTW developers will be prevented from making such changes -- causing LOTW to stagnate -- or developers of LOTW clients will be driven off by the continued obsolescence of their applications by non-upwardly-compatible

interface changes.

2. These interfaces unnecessarily require the developers of LOTW clients to become highly competent in the use of PKI and other low-level security infrastructure details. The issue is not whether such developers are capable of attaining this competence, but rather the defects introduced as they traverse the learning curve and the time that could have been spent adding new capability rather than spooling up on these details. A related point: the low-level nature of tqsllib's interfaces demand a level of documentation that is highly expensive, if not impossible to attain given the limits of precision in natural language.

At no point in any post did I say that "the team that created TrustedQSL and LoTW wasn't sincere and committed", nor do I believe this to be the case. I'd appreciate it if you'd cease these attempts at provocation.

I don't see this is as big an issue as you do. If particular I think
that you will be distributing a specific version of tqsllib with your
application and that's the version your application will work with.
A newer tqsllib may change its API but you are not forced to upgrade.

In that scenario it's more important that the interface between tqsllib
and the ARRL LOTW site doesn't change, than tqsllib's API. It might
(should?) be possible for someone else to implement the same interface
to the web site (ie product files compatible with tqsllib) without using
any tqsllib code.

Now if tqsllib's API did change and you needed a newer version, then you
would need to adapt to the new API. I don't think that's too
unreasonable.

I think that's an unreasonable requirement. Sometimes a good
implementation of new features means existing interfaces need to change.

But I'd expect that an application will release with a specific version
of tqsllib and that the library won't be upgraded by the users directly.
So an API change only affects the developer, who isn't being forced to
upgrade either.

Re: "A newer tqsllib may change its API but you are not forced to upgrade.". This newer tqsllib is correcting defects and/or adding features. Users will demand access to these improvements in tqsllib, effectively forcing the client application to upgrade.

"Cast in stone" is not a good analogy.

The standard for APIs is "upwardly compatible". New capabilities can be introduced so long as they don't obsolesce current capabilities. Yes, API members are occasionally deprecated, but this is infrequent, and generally accomplished over long periods of time. If deprecation is occuring with any frequency, the API design is likely flawed.

The problem with low-level interfaces is that they invariably generate the need for non-upwardly compatible changes -- or are unreasonably constrained by any requirement to be upwardly compatible. I've yet to encounter a domain sufficiently static for this not to hold true.

I agree, that is why I stated that old things must continue to work. I
should have used the upward compatible terminology, mea culpa.
As you point out, nothing is cast in stone as that would not allow
enhancements, not a good thing :-)

232. Private vs. public key and backup

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-10 12:17:03 UTC
From: Jim Reisert AD1C
Topic: 232 Message: 232

Just to be clear about this:

If I backup only my AD1C.tq5 and AD1C.tq6 files, am I ok in the case of a crash/loss?

Is AD1C.tq5 the private key and AD1C.tq6 the public key, or vice versa?

Thanks & 73 - Jim AD1C

No. That's not enough.

You need to also backup the .P12 files created in TQSLCert with the "Certificate->Save".

I am all in favor of engineering criticism, but most of what I
have seen from you is engineering bashing and false claims. I
don't think I have to go over all your false claims.

> I don't know why its relevant, but to answer your question DXKeeper
> is written in Visual Basic 6.0 Professional, SP4.

I thought so. I ask because every VB programmer that I have known
(an I have known a lot of them) either didn't know any other languages
or when they did learn others never when back to VB. VB is normally
the first language people learn. Shops that I have been in either
doesn't allow VB or it is done by junior people.

I am not saying that VB is a bad language. I have seen some fine
apps done in VB. It does give me any idea of where you are coming
from. I can see where you are use to seeing VB objects using a
lots of discrete C function calls would seem too low level. I can
also see where having objects would make things better. No question
about it. However the goal of the API was to support C functions and
other OS. VB can call always C DLLs, C can not however always call
VB DLLs.

> DXKeeper provided support for LOTW within two days of LOTW's release
> to beta test;

Wow! I am impressed! You did this all without knowing about the docs
for TrustedQSL? And you are worried about the API which only took you
two days to add to your program will change a little?

> As to why I believe that declaring the tqsllib's interfaces to be

> interface changes.

Logical Fallacies: Give 2 options when there is really three or
more.

You have shown no proof that current API won't be upward compatible.
The third option is that developers will make the changes required
to support new features. Which you imply will be massive changes.
Again you have no proof and the fact that TrustedQSL is built on
a stable standard (OpenSSL) would strongly suggest any changes
will be minor in nature.

> 2. These interfaces unnecessarily require the developers of LOTW
> clients to become highly competent in the use of PKI and

> tqsllib's interfaces demand a level of documentation that is highly
> expensive, if not impossible to attain given the limits of precision
> in natural language.

tqsllib has both high and low level functions. In an open source would
it is better to expose the low level functions and declare them as
part of the API interface than to try to hide them and then have someone
bypass the API. Then you do have something that will break on upgrade.

And yes the application developer must understand some level of
how an PKI works. PKI are complex, but they are not hard to
understand. Just like if you are setting up a firewall. You
don't need to understand how it works, but you do need to understand
what it does. I claim that if you understand what TrustedQSL API
does, then you can use it. If you don't then you risk breaking
security policy.

> At no point in any post did I say that "the team that created
> TrustedQSL and LoTW wasn't sincere and committed", nor do I believe

> participate and contribute.
>
> Improving the documentation of LOTW's source code in attempt to pass
> it off as an LOTW API would be a complete waste of time. No thanks.

So you are either not honest about participating and contributing or
you believe that the team is not sincere and committed. This is a
case where there is only two options.

You are either part of the problem or part of the solution.
That is the great thing about open source projects. If you
think you can make it better go for it! If the group agree
that your API is better then it will become the standard.
If part of the group thinks your API is better then it
will fork the project and there will be 2 options for an API.
May not be a bad thing.

I think the answer is no. I don't know where these keys are found and even the manager at ARRL that I talked to on the phone did not know. This is not acceptable. It is necessary that we be told EXACTLY what and form EXACTLY where these things need to be saved.

This is true however from what I have been told, IF you do a save of your certificate after loading it as a ,p12 file and put it in as safe place like a floppy you are protected from a crash as it save everything. This can be show to be true since you can simply install the LOTW on another machine and load this .p12 file and you are set to go.

Or the users' requirements are changing. That may mean that they weren't understood properly in the first place or that there are simply new features required, new ideas to implement etc.

I think it's unreasonable to require the API never to change in an incompatible fashion. Actually I feel you are being unnecessarily difficult about the current API. The API affects at most a few dozen developers; it's not essential for it to be cast in stone right now IMHO. Just get LOTW out to the users and let's enjoy it and see it evolve.

Hi Jim,

No you wouldn't be okay.

A .tq5 file is a certificate request
A .tq6 file is an ARRL/LoTW signed certificate

Both files do contain your public key but neither contains your
private key.

tQSLCert stores your private key is a different location.

The preferred backup method is to use tQSLCert to "Save" your
certificate(s) as PKCS#12 (.p12) file(s). One certificate per .p12
file. Then back-up the .p12 files.

A .p12 file will contain your signed certificate, your public key and
your private key.

If you password protect the archival .p12 file(s) you should have a
method to securely archive the password(s) as well.

Yes, I think this should be a feature to at least prompt users
to backup their all their cert data when it changes.
I don't think it is a good idea for the program to try to guess
where to back it up to. I would like my logbook program to prompt
me to backup all the data. That would be a nice feature that
I haven't seen on many logbook programs.

Some like a config option to backup to a CD only a week if any
QSO and/or cert changes has occurred. That would be really nice.

It would not be unreasonable to add an option such that whenever a .tq6 file was Loaded, tQSLCert would then pop-up a dialog box containing a reminder that the new cerificate and key pair should be backed-up and presenting the user with Save Now? Yes/No button pair.

Given the diversity of backup destinations and non-file system backup devices, I'm not sure how much further the program could do in actually performing the backup without user intervention.

> I think this is a good example of the program requiring something
> of the user which is easily cloaked.

Back-up isn't required, it's just a >>really<< good idea ;-)

The how and why of backing-up a new certificate are clearly spelled out in Step 4 of the "Getting Stated" instructions. But as an optional step it's something too easily ignored or forgotten so a programatical reminder becomes approriate.

Once you get the card (depends where you are on delivery time)
getting the certificate in a few hours
uploading files after that is almost instantaneous

At least it was here.

As it turns out, Darryl, I do know a few languages other than VB. In my 32 years in the computer industry, I have developed applications in Ada, Algol, C, C++, Cobol, Fortran, Java, Modula, and PL/1, as well as numerous assemblers; the first 10 years were spent designing commercial minicomputer and microprocessor CPUs, and involved lots of low-level coding. As for being a junior person, I am the founding product development vice president of Rational Software, where over the past 22 years we've helped thousands of companies make the transition to modern software engineering by providing them with process, tools, and services. Our development teams produced the Unified Modeling Language (UML), the Rational Unified Process, more than 40 popular books on software engineering, as well as an industry-leading suite of software engineering tools that together generate more than $650M in annual revenues. Rational was acquired by IBM earlier this year, and now drives IBM's development tools efforts.

I chose to implement DXLab in Visual Basic because it enables one developer to rapidly build and evolve Windows applications. Besides allowing me to give something back to a hobby I enjoy, it enabled me to stay "hands on" with the technology as my leadership responsibilities at Rational grew to the point where working directly on its products was impractical. Your assumptions as to my limitations as a developer are off base.

>> DXKeeper provided support for LOTW within two days of LOTW's
>> release to beta test;

> Wow! I am impressed! You did this all without knowing about the
> docs for TrustedQSL? And you are worried about the API which only
> took you two days to add to your program will change a little?

DXKeeper's current support for LOTW is to assemble an ADIF file that LOTW will likely accept in one pass by automatically converting modes and identifying QSOs that LOTW would reject. It makes no use of the TrustedQSL source code for the reasons I have explained in previous messages.

> You have shown no proof that current API won't be upward compatible.
> The third option is that developers will make the changes required
> to support new features. Which you imply will be massive changes.
> Again you have no proof and the fact that TrustedQSL is built on
> a stable standard (OpenSSL) would strongly suggest any changes
> will be minor in nature.

Darryl, it is not yet possible to construct proofs in the domain of software architecture. We have developed a set of principles -- modularity, abstraction, encapsulation, object-oriented decomposition -- that when appropriately applied enable the creation of robust, resilient architectures. The degree to which a candidate architecture is consistent with these principles is a matter of judgement and experience. During the last 22 years, I have not only reviewed the architecture of every product produced by Rational, I have engaged with many of our customers to review and evolve their architectures -- from modest applications of LOTW's scale to air traffic control systems, mission-critical financial services, and battlefield management systems. In my judgement and experience, using the current tqsl interfaces as LOTW's API would, as I've said before, an exceptionally bad idea.

> tqsllib has both high and low level functions. In an open source
> would it is better to expose the low level functions and declare
> them as part of the API interface than to try to hide them and then
> have someone bypass the API. Then you do have something that will
> break on upgrade.

>>>I do not advocate hiding the current tqsl interfaces. Some developers may well decide that access to low-level interfaces is for their application more important than protection from low-level design changes; that's their tradeoff to make. But that's no excuse for designating the current low-level tqsl interfaces to be LOTW's API.

> And yes the application developer must understand some level of
> how an PKI works. PKI are complex, but they are not hard to
> understand. Just like if you are setting up a firewall. You
> don't need to understand how it works, but you do need to understand
> what it does. I claim that if you understand what TrustedQSL API
> does, then you can use it. If you don't then you risk breaking
> security policy.

>>>If you start with the bias that "...yes, the application developer must understand some level of how an PKI works" you are unlikely to succeed at encapsulating that knowledge. Functionality far more complex and mission-critical than PKI has been successfully encapsulated.

>> At no point in any post did I say that "the team that created
>> TrustedQSL and LoTW wasn't sincere and committed", nor do I
>> believe this to be the case. I'd appreciate it if you'd cease
>> these attempts at provocation.

> Oh really: Here is your email of: <irrelevant material snipped>

>>>> If there is a sincere and committed effort to engineer and then
>>>> document an effective API for LOTW, I am more than happy to
>>>> participate and contribute.

The above sentence, to which I suspect you are referring, says "if the LOTW team is ready to move forward on building an effective API for LOTW, I will be happy to help". There is no way to interpret it as a slap at the LOTW team.

I think we've taken this interaction about as far as it can go. Your responses increasingly amount to personal attacks rather than technical substance. The tone of your posts speaks for itself. LOTW project management clearly has the benefit of both of our perspectives. Its their call.

73,

Dave, AA6YQ

To be fair, counting on LoTW to "skip" dupes is not good practice; and not because it doesn't work.

Simply uploading duplicates rather than having each user do some minimal level of bookeeping on their own ends up costing LoTW bandwidth to download and more processing time on their server to do the dupe checking. If widely practiced such an approach must be expected to lead to worse service and/or higher fees for everyone.

261. Minor bug --- TQSL is over-counting the number of contacts it processes

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-11 22:02:06 UTC
From: Hans K0HB
Topic: 261 Message: 261

LOTW still seems to be dropping some QSO's.

Below is the message I got from TQSL when I built a .tq8 file. Note that it says it wrote 48 records.

```
------------------------------------------------
Signing using CALL=K0HB, DXCC=291
C:\radio\hylog\HYPERLOG.ADI: wrote 48 records to
C:\radio\hylog\Hype101103.tq8
C:\radio\hylog\Hype101103.tq8 is ready to be emailed or uploaded
------------------------------------------------
```

Then when I emailed the file to the LOTW robot, the automated response (quoted below) says it processed only 46 records.

```
------------------------------------------------
Processing file Hype101103.tq8

2003-10-11 22:41:14 LOTW_QSO: Processing file: Hype101103.tq8
2003-10-11 22:41:14 LOTW_QSO: Certificate found for K0HB - UNITED STATES OF
AMERICA (291)
2003-10-11 22:41:17 LOTW_QSO: Successfully processed 46 QSO records in
3.226814 seconds
2003-10-11 22:41:17 LOTW_QSO: No errors encountered
------------------------------------------------
```

Seems there are two QSO's missing. To trace the problem, I went to the source ADI file and found there actually were only 46 records in the file, so TQSL is over-reporting the number of contacts it processes, but the LOTW robot is counting and reporting the correct number.

I think in the future we should expect log book software to know which
QSOs have already been uploaded and not send those again. Until then
we are all using TQSL manually with ADIF exports from our logging
software and it's not so easy to skip duplicates.

We should indeed expect logging applications to provide a function
that uploads all QSOs that haven't previously been successfully
uploaded to LOTW. This won't be possible until LOTW provides a means
by which logging applications can determine which uploaded QSOs were
accepted, as opposed to rejected.

This capability is provided by eQSL.cc today, and is exploited by
several logging applications.

Acknowledging the limitations of the current process, there's a world of difference between the inevitable oversight and occasional mistake and deliberately throwing the problem over the fence for someone else to deal by uploading everything each time.

There's an email response containing any processing errors and a web page listing successes. Error messages can be parsed and any logging application that can pull spots off one web page is capable of querying QSOs successfully uploaded from another.

What exists clearly is not the ideal status interface nor is it aesthetically pleasing. It certainly fails to meet the requirements that were called out in the functional spec.

However even in its currently deplorable state, the status of individual QSOs can readily be determined by a program provided its author is more interested in providing users with functionality than polemic.

You're correct, Mike, its certainly possible to parse the results from text in email messages or HTML. As you imply, such techniques are notoriously fragile; on the other hand, parsing the HTML generated by uploads to eQSL.cc has proven stable for more than year.

I might have implemented the equivlent for LOTW by now, had LOTW project management not stated -- publicly, on the TrustedQSL reflector -- that a more robust mechanism would be made available. I was surprised to see LOTW transition to production without this mechanism; my subsequent inquires into its status have gone unanswered, unless "stop bugging me" (my paraphrase) counts as an answer. Perhaps if LOTW were more explicit and open its planning, logging application developers could be more effective in complementing LOTW's efforts.

In the absence of any collaborative interaction, our only means of influencing LOTW seems to be polemic on forums such as this one. If you can improve this state of affairs, it would be a substantial contribution...

From: Martin Fouts
Topic: 129 Message: 268

Hi,

I've done a quick hack of the TQSL source and have managed to get it to build on FreeBSD. It there's any interest, I'd be willing to clean it up and turn it into a FreeBSD 'port'. I would also, of course, submit patches to the sourceforge product.

I'd have asked this on a LOTW developers mailing list, bud I didn't manage to find one.

Thanks,

Marty AE6IP

271. Problem with PSK contacts

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-12 16:33:14 UTC
From: Vince
Topic: 271 Message: 271

I just started using LoTW, have it up and running ok here, it accepted the some 11000 contacts that I had entered. But it would not accept the PSK contacts I had made. I see that the LoTW is looking for PSK-31, etc. But my logging program, (Prolog) only list the contacts as PSK only. I think that this maybe something that the logging program may have to be updated, because I am not able to enter PSK-31 in the logging program. I do feel that the LoTW program should be able to accept just PSK as the mode of contact. After all one PSK contact is much like another. This would be like rejecting RTTY contact because I used FSK instead of AFSK, or 100 baud instead of 45 baud.

If there is no good answer to this problem, I will just ignore the 50 PSK contacts that I have made. It will not be worth the trouble. But I would like to correct this for future contacts.

Vince, K6BIR

272. RE: [ARRL-LOTW] Problem with PSK contacts

Topic: 271 Message: 272

Actually simple to resolve. Run TQSL. Under the File menu item, select Preferences. Then select the "ADIF Modes" tab. Enter a mapping from PSK to PSK31. Convert you file and transmit it again.

Sure I have, just check my past email and below for an abridged list.

> As it turns out, Darryl, I do know a few languages other than VB. In

Thank you, your resume is quite impressive. So is mime, but neither
should be used to intimidate others when the facts don't support
the conclusion.

> I chose to implement DXLab in Visual Basic because it enables one
> developer to rapidly build and evolve Windows applications.

That is a good reason to use VB. The last time I looked at VB
was about 5 years and I felt that it was a much weaker and more
unstructured than Borland's Delphi for RAD. Much more unstructured
than something like C++ Builder, Delphi or other accepted RAD suites.

I assume nothing, I just stated my experience. Just as you have
stated yours. Which doesn't tell us much except that you help founded
a company that filled a large need and therefore became very successful
and
you can throw buzz words out with the best of them.

> DXKeeper's current support for LOTW is to assemble an ADIF file that
> LOTW will likely accept in one pass by automatically converting modes
> and identifying QSOs that LOTW would reject. It makes no use of the

> messages.

You really fly loose on your terms. Dumping an ADIF file is hardly
supporting LoTW.

> > you have no proof and the fact that TrustedQSL is built on a stable
> > standard (OpenSSL) would strongly suggest any changes will
> be minor in
> > nature.
>
> Darryl, it is not yet possible to construct proofs in the domain of
> software architecture.

So if it isn't possible to construct proof, then you are free to make
any statements you wish to support your view?

Many of your claims have been shown to be false as in:

1. Not documentation. There is.
2. Tqsllib isn't an API. It is. Complete with a production
level sample program.
3. Only lower API exist. When in fact the low level functions
are labeled as such in the docs.

Not only is there not proof, but you have let to give any concrete
evidence or examples of what is wrong our how it could be improved.
All you have done is throw rocks and abstract buzz words.

Plus you say it is bad, but you are unwilling to help change it or
for that matter give concrete examples of how it could be improved.
In fact the only suggestions you have given is to read books.

What you have us do:

1. Shutdown LoTW and wait for years so a solid design
can be produce and them code it for years more?

2. Not shutdown LoTW and do 1 which would create a new and very
possible incompatible API?

3. Allow developers to use the current API and as help from and
see if there is any major changes needed and address them based
on facts instead what if's.

> In my judgement and experience, using the current tQSL interfaces
> as LOTW's API would, as I've said before, an exceptionally bad idea.

We know you think it is "exceptionally bad idea". You have told
us why you think it wasn't designed correctly (in some fairly
abstract terms) but from what I can tell you haven't used or tried
to understand the API enough to have an intelligent opinion on
how stable it is. You started saying that the API was crap before
you even knew there was docs. Which means you had this opinion

before you could have possibly known enough to make such a statement.

> >>>I do not advocate hiding the current tQSL interfaces. Some
> developers may well decide that access to low-level interfaces is for
> their application more important than protection from low-level
> design changes; that's their tradeoff to make. But that's no excuse
> for designating the current low-level tQSL interfaces to be LOTW's
> API.

I have seen no evidence that you have worked with or even reviewed
the current API enough to make that call. Evidence seems to suggest
that your belief in the instability of the API is based upon your bias.

> >>>If you start with the bias that "...yes, the application developer
> must understand some level of how an PKI works" you are unlikely to
> succeed at encapsulating that knowledge. Functionality far more
> complex and mission-critical than PKI has been successfully
> encapsulated.

Looking at the source for tQSL is looks very encapsulated to me.
For example to sign an ADIF file seems to only require about
half a dozen or so tQSL API calls. Each of them has input which
must be user or application (which is user or developer) supplied.
I am not saying it isn't possible to encapsulate it a little more
but to what end. So there is 3 calls instead 6? Give me a break.

I believe that if such a encapsulated API was release you would be
whining about not enough access to low level functions.

> >> At no point in any post did I say that "the team that created

> the LOTW team is ready to move forward on building an effective API
> for LOTW, I will be happy to help". There is no way to interpret it
> as a slap at the LOTW team.

Changing your tune again huh? Why does it take the LoTW team to "fixed"
the TrustedQSL API. They are two totally different entities. LoTW is a
closed source Logbook database system which uses TrustedQSLs.
TrustedQSL
is an Open Source project that LoTW team has done the lions share of
work
to create.

> I think we've taken this interaction about as far as it can go. Your
> responses increasingly amount to personal attacks rather than
> technical substance.

Now that is funny, for the last two years you have been attacking LoTW
and TrustedQSL teams about the poor design saying the project is doomed.
Now that it is a working system you are still attacking it before you
even knew there was docs. Having an agenda to discredit the work of
the LoTW team based solely on your uninformed opinion clearly opens
you up to personal attacks. Even at that my responses to you and
about you has only been to point out the fallacies of your claims.
If you don't wish to be used in this way, then stop using yourself
as the proof of your claims and give hard evidence. In almost
every email I have ask for proof, examples and/or help. Each request
has been meet with technobabble or personal attacks

I have only pointed out the logical fallacies in your augments of which
some are based upon your personal experiences and without any real
knowledge of the subject matter (TrustedQSL API). It isn't good
enough to say it is a bad API because I said so.

Either lead, follow or get the h*** out of the way.

274. which username/password?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-12 17:37:21 UTC
From: Wayne Wright, W5XD
Topic: 274 Message: 274

Stupid question.

I am attempting to login at https://www.arrl.org/lotwuser/default for the first time. I have my certificate, and I can upload LOTW files (created by software I wrote myself using the infamous API--but that's an altogether useless thread), so I've come across and created a few usernames and passwords as I went along. But all the usernames and passwords I think it might want don't work on that login page, and there aren't any hints on the login page about how one establishes a login.

Thanks,
Wayne, W5XD

Hi Wayne,
You must use the password that was sent via email with your LoTW
certificate. On that email a user name and password were provided.

There are a NUMBER of counting inconsistencies in LoTW !!!

I pointed this one during the Beta phase. I then complained about it again
when I got a "Don't worry about it" type of answer from the LoTW people.

It seems that LoTW ALWAYS reports 2 counts more than the actual number of QSO's
processed.

I contend that it would provide a more "User Friendly" interface if LoTW just hid
the 2 LoTW internal files from the used and just reported Q's procedded.

That's something we can all understand, 48 Q's in file, 48 records processed !!

Bottom line is Lotw is NOT dropping Q's, is adding 2 LoTW internal records.

TQSL reports that it wrote a total of 48 .tq8 records to the .tq8 file.
That would be: 1 Header record, 1 Station record plus 46 Contact ("QSO")
records.

This new facility appears to meet all of the logbook synchronization
requirements, and then some. Nice work, whoever designed and
implemented it.

Attachments: 1 described; binary payloads are missing from this source WARC

Well, I reached my first 100 on LOTW, 103 QSL'd so far out of 6400 QSO's that I uploaded. Just 10 DXCC entities confirmed though. Latest was United Arab Emirates.

I have achieved DXCC, in fact I did over 100 countries on 10 meters while a Tech Plus, but I never had the nerve to mail my cards in and did not have the time to take them to a field checker. Will be nice to break the DXCC mark via LOTW...however long that takes!

Delphi did not exist when I started DXLab; otherwise, I'd have used
it. VB has come a long way in the last 5 years.

> You really fly loose on your terms. Dumping an ADIF file is hardly
> supporting LoTW.

Given the amount of time users were wasting repeatedly uploading
large ADIF files only to have them rejected after exceeding the error
threshold, it provided -- and continues to provide -- substantial
value.

None of the above. Construct an API on top the current trusted QSL
interfaces. Any application written on the current interfaces is
unaffected.

> Looking at the source for tQSL is looks very encapsulated to me.

You've already acknowledged "...yes, the application developer must understand some level of how an PKI works". The goal of encapsulation is to eliminate that requirement.

> Changing your tune again huh? Why does it take the LoTW team

If Trusted QSL is in need of an API, and the LOTW team has done the lions share of work to create it, then they are the ideal candidate to create the API, as they possess the expertise that API should encapsulate.

> Now that is funny, for the last two years you have been attacking
> LoTW and TrustedQSL teams about the poor design saying the project
> is doomed.

My criticism two years ago was directed at the approach you personally were taking on the ADIF 2.0 reflector at that time; it was not directed at LOTW. Those comments were sent privately, as I recall, in hopes of avoiding a defensive reaction. Since you dropped off the TrustedQSL project shortly thereafter and the direction changed, the point seems moot.

This is my last comment on this topic. You are welcome to the last word.

My logging software (Logger32) already does this - it keeps track of paper QSLs, eQSLs and LOTW seperately. It will export ADIF files only for those that haven't been sent.

And before Dave asks :-), no, it does'nt automatically look at which QSO's have been accepted and which have been rejected.

Hi Hans:
Gee, not trying to flame anyone !!!

I was just pointing out the problem has existed since the Beta test phase and that many people in the club have noted the same thing you pointed out.

The 2 extra records are not a problem once you know about them, but they sure confuse a lot of people when they are just getting into LoTW.

My only hope in replying to your message was that some of the LoTW people would take note of the problem and fix it.

Dave, Darryl,
You know, I don't think the majority of us care
what you think about each other, each other's
resumes, abilities, hair color, or what you had for dinner.
Why don't you two exchange e-mail addresses, phone
numbers, mailing addresses and let the rest of us learn
what we need to know about LOTW.
I'm sure it can and will be improved greatly in time.
But for the time being "Can't we all just get along?"

> QSOs have already been uploaded and not send those again.

My logging software (Logger32) already does this - it keeps track of
paper
QSLs, eQSLs and LOTW seperately. It will export ADIF files only for
those
that haven't been sent.

And before Dave asks :-), no, it does'nt automatically look at which
QSO's
have been accepted and which have been rejected.

Hi Gil,

Well, once you have logged on to the LoTW website with that password
just go to "Your Account" and look to the left and see Change Password.
You can click on that and change it to anything you like. They are a
little strange for my old brain, hi.

291. Multiple Calls

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-12 23:57:09 UTC
From: gbaron
Topic: 291 Message: 291

We have what seems to me a ludicrous situation. W0MN and W0MN/0 are different calls. For award purposes they are both valid fro the same award I most cases, WAS,. DXCC ,etc. How do we aggregate these things. You are not really going to say I have to send 2 records so that no matter which the responder sends it will match and even if it matches I have to have 2 so that I can get all my contacts counting to the same DXCC award.

I really hope not? I assume and hope that LOTW will automatically take care of the rules about where the circle of operation can be and still count for the same award=. Example that if I am on /0 because I am at an outdoor event and wish to designate as such or am out walking and wish to designate so that they both will count for the same award. Yes, I should not ever use /0 again BUT that does not help past contacts!

Good point Gil !!!
I got one that has part of my callsign and part of "KY Jelly" incorporated into it !!!

I guess I'm starting to get too old for this kind of game stuff !!!

I keep seeing "Change Password" when you log into LoTW and click on "Your Account", however it doesn't tell you what you which password you are changing !!!

Maybe LoTW could be a little more explicit !!!

293. data out of range problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-13 01:26:27 UTC
From: Anthony W. DePrato
Topic: 293 Message: 293

well anyone having this problem ?
my log program makes a adif file. i click to sign it from tqsl.
first thing i get is
error
adif field data length overflow on line 2
band : 20m
call:vu2au
mode: ssb
asked me if i wanted to ignore errors i hit yes
next thing i get is
certificate qso date out of range on line 2

i have set the dates as 1962-09-04 my ticket date
set it as 2000-10-10 first date of first qso in the log
and it still does not let me convert it to tqsl format

this is getting weird..

Well, what password could it be? There are three:

1. Password sent to you on postcard by the ARRL. Only used once for
initial registration, so no need to change it.

2. Password for ongoing access to the web site.

3. Password for your private key. The web site doesn't have your private
key; only the TQSL software has that and can manage it.

So quite obviously it must be #2, which is just what you want.

Dave, Darryl,
You know, I don't think the majority of us care
what you think about each other, each other's
resumes, abilities, hair color, or what you had for dinner.
Why don't you two exchange e-mail addresses, phone
numbers, mailing addresses and let the rest of us learn
what we need to know about LOTW.
I'm sure it can and will be improved greatly in time.
But for the time being "Can't we all just get along?"

In exactly the same manner as individuals who have held multiple calls during their careers: you need separate certificates for each call e.g. W0MN & W0MN/0. And you must sign the certificate requests for each additional "call sign" such as W0MN/0 with the certificate for your primary call, W0MN. Signing the additional certificate requests allows all of the QSOs made under the various call signs to be grouped together.

>You are not really going to say I have to send 2 records

Absolutely not. Not only would that practice be inefficient, to simply double enter everything just in case, smacks of inverse data mining and arguably verges on the unethical.

>I assume and hope that LOTW will automatically take care
>of the rules about where the circle of operation can be and still count for
>the same award. Example that if I am on /0 because I am at an outdoor event

To automatically check the "circle" for WAS or VUCC requires the user to upload sufficiently precise station locations. That means a six character grid square. Otherwise LoTW is unable to check the circle.

> unaffected.

Ok, I think that concept has a lot of merit to it. Why didn't
you say that from the beginning instead of what seemed to me of
saying that the current API is a bunch of crap and needs to be
thrown out? I think it is a great idea to try to encapsulate
the API into objects. I don't think that it can be done effectively
where it will be compatible across C++/C/Delphi/VB/Unix/Linux/Macs etc
without using language depend constructs. Which for the record
I think should be done.

If that is really and you feel and I am willing to give you the
benefit of the doubt, then I misunderstood your intent. If so
then I sincerely apologies! In my defense the tone of your posting
was that the state of the API was such that it should not be used.
Any suggestion to that effect I will strong disagree with.

> You've already acknowledged "...yes, the application developer must
> understand some level of how an PKI works". The goal of encapsulation
> is to eliminate that requirement.

Yes and I stand by that. Even if the API could successfully hide
all the gory details, the application developers still needs to know
where files are stored, which ones must be backed, what certs in
order to present them correct to the user, etc. I don't think
the developer need to know the details of an X.509v3 cert.

> If Trusted QSL is in need of an API, and the LOTW team has done the

> encapsulate.

In a perfect world maybe, but I think we developers will have to take
up this battle if it is going to be done, but I don't believe
that developers should wait for a better API before adding support
for TrustedQSL. It maybe a long time in coming.

Yes, separate logs: one with the contacts made using yourcall and one
with the contacts made using yourcall/m. Each log signed with the
appropriate certificate.

> does LoTW know that they are the same for matching purposes.

No. yourcall and yourcall/m are not the same for matching purposes.

LoTW does know that yourcall and yourcall/m belong to the same
individual for award credit and records keeping purposes.

Greetings Mike and the group,

I don't really have any good answers for this, but it seems like it will
be very error prone. At least until folks get use to it.

For example I worked the PA QSO party and made contact with KD8MQ/3.
He/she
could have a cert for KD8MQ with a station record for Armstrong PA or
he/she
could have a special cert for KD8MQ/3 which would also have a station
record
which reflect Armstrong PA. Both methods seems to be legal and correct
but
one will not reflect a match.

It seems to me that certs should not be issued to / calls in the same
DXCC
Entity or KD8MQ/3 matches KD8MQ. It doesn't really mean anything,
except
to flag the op that the contact isn't where they expect it to be.

Anyway that is my 2 cents worth.

Darryl,
While your idea has some merit, it would not be well received by
the VHF/UHF weak signal crowd! A lot of rover/portable operations
take place where the station goes out to a rare grid and operates
during a contest or whatever. They should have the option of using
LoTW was well! Think of it the same way as if you went to VP5 and
used the call VP5/WA1GON, same principle except the VHF/UHF crowd
may only go from EN84 to EN67 and I can guarantee you that a 6m
station calling CQ from EN67 on a good Es opening shows up that
would create a pileup that would rival any one that you could hear
on HF! One of the first awards that LoTW is supposed to support is
VUCC, and the rovers/expedition stations are a big part of that.

The problem with domestic portable designations is that no one is required to attach them and as such they are often not even logged when sent. I will log KK1L/3 as such, but if it were KK1L/1 what't the point. But that is just me. I don't know the right solution for this whole mess, but would it be possible for the matching for domestic portable contacts to be done without the portable designation after checking the portable log (if one exists)? So the logic for KK1L/3 goes something like If exist KK1L/3 cert, then check KK1L/3 QSOs for QSL. If not exists KK1L/3 cert OR no QSL from above check KK1L QSOs for QSL. Does this make sense to anyone? -- 73 es God Bless de KK1L...ron (kk1l@...) <>< Ron Rossi ASIC PE Test -- IBM Microelectronics QTH: Jericho, Vermont My page: http://www.qsl.net/kk1l Bounce SPAM! > to be legal and correct but one will not reflect a match.

Two issues here.

One is at the design level. The requirement is that the call in the cert be identical to the call sign used. For better or worse the choice was to go with simpler approach rather than the more elegant one.

In essence the way one specifies "MY_CALL" for a contact is via the call sign on the cert.

> It seems to me that certs should not be issued to / calls
> in the same DXCC Entity or KD8MQ/3 matches KD8MQ.

The other issue is logging policy (or philosophy). If KD8MQ's log indicates that he sent KD8MQ/3 then your log must also show KD8MQ/3 otherwise no credit.

Logging accuracy is an implicit requirement, no automated credit for busted calls. If the log data disagree then it's up to the two parties and not the automaton to resolve the discrepency.

It's not a wholly new concept with LoTW, with the advent of electronic logs this is how contests are increasingly being scored. Don't know about the PA QSO party but not logging the /3 would get you a busted Q in Novemeber SweepStakes for example

I agree with Darryl on this one. I routinely do NOT record the "/3" or similar portable designations. If I work KD8MQ/3 in he will show up in my log as KD8MQ, with a QTH of Maryland (or where ever in 3-land he tells me he is.) Consequently enforcing a match to the "/3" designator means he will never get a Minnesota QSL from me (I don't need a Maryland QSL).

Dennis and the group,

I am not sure I understand how having a portable call helps with grid
or county awards. If I go to another grid then I create a new station
with all the QTH info which includes the grid square, country and state.
That seems much more detailed than having /? on the end and much less
error
prone.

Am I missing something?

I also see this as a problem. I'm primarily a VHF/UHF operator.
I have many Rover and Portable logs that need to go into LoTW, but
I'm holding off until this problem get resolved.

Also the time problem where I have 2 QSO's with the same station from
different grids within a few seconds as they move from grid to grid.
One of the gets eliminated as a dupe.

Mike, Your last statement is not correct. The contact is not busted for missing a domestic portable designation. (That is not my opinion. It is based on a statement from the log checker.) The FCC has allowed just about anything to follow a "/" at the end of your call when operating domestically. For example you would not need to log KK1L/IMALID were I to send it. You may think I am one, but it is not a required part of my call =:-). Were I to be in QC for SS CW (don't you wish!) I would be required to send KK1L/VE2 and you would be required to log it for credit. LotW needs to work in a similar fashion. -- 73 es God Bless de KK1L...ron (kk1l@...) <>< Ron Rossi ASIC PE Test -- IBM Microelectronics QTH: Jericho, Vermont My page: http://www.qsl.net/kk1l Bounce SPAM! It would get a busted Q FOR THE CONTEST, but would still be valid for WAS
and other awards. There MUST be a way to handle these things or people will
not use LOTW nearly as much as it should be used.

I hate to say "me too" but I agree that "/" should be ignored
within the same "country" or any other administrative area
that does not require a unique designator.

When I first moved from 8-land to Florida I had no intention
of changing my call. However, I entered some contests that
used US call areas (0-9) as multipliers and required those
operating outside the call area in their license to sign "/".
Since I had no way to tell retrospectively which contacts
were made with my base call and which were made "/", I had
to upload the entire period in question both ways (fortunately,
it was a relatively short period of time and represented only
about 1K contacts).

I don't think so, Gil.

I routinely do NOT include the "/0" style portable designators when contesting. There are a lot of them heard during Sweepstakes, for instance, and I've never had a busted-Q reported for this practice. (And yes, I do read my UBN reports religiously.)

Topic: 314 Message: 314

I just tried to sign a second group of QSO in preparation to up load to LoTW and received the following error message.

Field name overflow line 16

I counted down 16 lines of text (I did not include blank lines) and found <address:50:m> Erik Roy Jimenez

I checked the file I sent yesterday and the field name <address:nn:m> seems to me to be the same.

Did I count the lines correctly and if I did what is wrong with the field name?

Duhhhhh! What was I thinking when I wrote that!

Of course both ARRL & CQ log checking treat portable designators in a significantly >>more<< flexible manner than does LoTW. I knew that :-) Apologies to Tree et al. for my getting that one screwed up so bad.

Speaking of Macs, is anyone working on LOTW code for the Mac? Perhaps this has already been discussed here and I have missed it.

Hi,

In the next few months I am going to try to compile on Mac OSX, but I
don't have a lot of time to work on it. I will keep you posted.

319. mobile calls

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-14 03:16:42 UTC
From: Mike Cornwall
Topic: 319 Message: 319

Hello all,

I've been lurking/listening to the multiple call sign debate a bit here (I learn a lot that way) and I have a question for the group...

First, I've yet to upload or do any LOTW-related stuff yet. Most of my operating has been from home so KB9WQJ was what I sent. However, I commute over to 0-land and do some mobile as KB9WQJ/0/M (spoken as "mobile zero"). I also did some mobile while on vacation both as KB9WQJ/4 (spoken as "KB9WQJ mobile 4") and KB9WQJ/4 (spoken as "KB9WQJ portable 4") from the beach on a kite lofted wire. I also have some plain old KB9WQJ/M while mobile in 9-land.

I use Win-EQF for general station logging and it has a place for Operator which I have always filled in as KB9WQJ. It has enough space for KB9WQJ/# but not enough for KB9WQJ/M/#. And I tried an ADIF export of some log files after changing one of them to operator KB9WQJ/M and I noticed that nowhere in the ADIF file did I see my call listed. One of the emails here had indicated something about a MY_CALL field. I saw no such field in the output ADIF. So the only other recourse I have is to place such data in the Comment field. Notes seems to be too hidden. I have cc'd Mr. Dandrea N3EQF in the hopes he has an idea...Tom, I know you're a busy guy what with the excellent support you provide...this is not an urgent thing. I'm just sort of exploring the idea of uploading to LOTW at present. I may wait until things settle down a bit and people get more experience with all of the different scenarios first and work out ways of dealing with them.

So essentially, I'm clueless. Should I break my log into several different logs? This might be a hassle since I would like to combine them into some sort of master log so I would have a master log with everything and smaller logs for each of the possible calls: KB9WQJ, KB9WQJ/M, KB9WQJ/0/M, KB9WQJ/4, and KB9WQJ/4/M. Or should I keep it all in one log and split it up only for uploads? Or is there some other strategy I haven't thought of?

What does the group here think would be the best course of action, especially in light of future logbook uploading requirements? What strategy should I use to ensufre a minimum of having to torque the data around later to fit rather than organizing it correctly now while it is still relatively smaller in aggregate?

Thanks in advance for any direction. I hate to do what seems right now only to find out later that I have to do some changing. There doesn't seem to be too much about it yet on the Win-EQF message board at eqf-software.com.

73 all and thanks again.

From: Bill Metzger
Topic: 319 Message: 321

Mike,

This is a very good question and I look forward to someone answering it. I sent virtually this same request to the ARRL and have not received the courtesy of a response (2 weeks). I too operate mobile on a frequent basis and have operated through Wyoming, Montana, South Dakota, Nebraska and my home State, Missouri. For DXCC, mobile contacts will still count since they are in the same region, however, for WAS, the only ones that count are within (15 miles, I believe) from the home address. So, what do I do with my mobile log? Do I create a separate LOTW logbook for mobile only? If I do, how do I get credit for DXCC? If I don't, how do I keep WAS accurate?

For DXBase 2004, it is easy. I can create a separate log but still end up with the same issue above. Any input from all you mobile operators would sure help.

Thanks in advance.

If your call sign does not appear in the ADIF file, don't worry.

Your call sign does not have to appear in the ADIF file. LoTW interprets
the call sign on the cert used to sign the upload as the call sign that was
used for those QSOs.

The way LoTW works today it is necessary to have multiple certs, one for
each call sign variant used.

>One of the emails here had indicated something about a MY_CALL field. I
>saw no such field in the output ADIF.

That was me. Again, don't worry, your call doesn't need to be in the ADIF
file.

>Should I break my log into several different logs?

That's not necessary. Do what you're comfortable doing. You can continue to
keep a master log of everything if that's the easier way for you to work
with your logging program

For LoTW you will be need to be able to write out separate ADIF files for
the QSOs made with each call variant, then sign and upload them separately
using the cert corresponding to the call sign used.

Hans :
i use Paper Chasers Log.. which was Drew's old DXLOG. i started out with tqsl ver 1.06 had problems with it taking the adif file. then updated to ver 1.07 better but still lots of problems looping ect. updated again. ver 1.08 data length overflow then looping. last night updated to ver 1.09 well the looping and crashing stopped. but it found errors in every qso file. looked at the adif file that mark uses and it all looks good. imported it to Logger 7.09 and it took it. but TQSL will not take it and sign it. running XP PRO . wonder if anyone else has been having problems like this ? guess i need to find who to contact at ARRL and see if i can get this worked out. i only entered 336 qso's as i did not want to enter 40k until it was all working and debugged.

Bill Myers, K1GQ, took a look at the TrustedQSL code with the idea of
getting something working on the Mac.

This is part of what he posted on the Ham-Mac mailing list:

At 23:19 -0400 10_07_2003, Willard Myers wrote:

Anyone who is interested in developing LOTW for the Mac (please,
please!) might want to sign on to the Ham-Mac mailing list

http://mailman.qth.net/mailman/listinfo/ham-mac

Of the lists I'm on, that seems to be the one where most of the
discussion on this topic is going on.

Julio,

tQSL is reporting an error on the 16th line that it read including
blank lines.

Try counting down 16 lines including the blanks and see if anything
looks odd there.

73,
Mike K1MK

P.S. Don't get mislead by wrapped/folded lines. The lines in an ADIF
file could be longer than the window that you use to display the file.

The specific error message(s) and an example of one of the records that's
giving tQSL heartburn would be helpful in diagnosing the problem.

I just got my cert today. I posted off my ID (from Australia) last
Tuesday and so it got to the US via post and processed by the ARRL in
about 7 days. Not bad at all.

Hi Julio,
I don't know for sure what it going on there. Here is a similar contact
that I sent to LoTW and it went through fine. It was exported as ADIF
from Logic 6. Perhaps you can stare and compare and find something
wrong. What logging program and version are you using?

One thing I did notice after I looked at your submission and mine is
that the colon is missing after DXCCSUB. It should read DXCCSUB: The
count for that item shows <comment:8> DXCCSUB and there are only seven
characters instead of eight. Don't know if that would do it or not.

Looks like " DXCCSUB" is the value for 'comment' and it is 8
characters wide. Don't forget to count the space after ":8>"

Yep, that is true -- but there should not be a space after :8> and there
should be a colon after DXCCSUB: The line should read :8>DXCCSUB:
So, don't know if that is the problem or not but it is worth fixing and
uploading again to find out.

Ok Chris. Is DXCCSUB to be considered as a field tag or as a piece of information?

According to the currently valid ADIF specs I know of, DXCCSUB is no known field tag.

Well " DXCCSUB" is eight characters long so the field is
syntactically correct. In this case that's all that tQSL cares about.

> there should be a colon after DXCCSUB:

Okay. But COMMENT is an unsigned field for LoTW purposes so it's
value is ignored by tQSL.

The error message from tQSL has to do with what tQSL thinks is a mal-
formed field: tQSL encountered a "<" but didn't find a ":" or a ">"
in the next 64 characters.

I sent Julio another message off list. To get the record we're
dicussing Julio said that he read down 16 "records". If that's
literally correct we're still not looking in the right place.

The perhaps less than totally helpful error message from tQSL is
giving us the error location in terms of line breaks (new lines
chars) not ADIF records.

Yes, DXCCSUB: is a user installed bit of information in Logic to
indicate that the card has been submitted and accepted for the DXCC
award with ARRL so the logging software can track it for awards purposes.

I'm using LOGic6 V6.0.163. I looked over both your line and mine and don't see any glaring difference. with the exception of the : you mentioned in your next post. However a couple of lines of data before which were accepted are the same!!!!

What happens if I say to ignore the error?

Julio, W4HY

Hi Julio,
I don't know for sure what it going on there. Here is a similar contact
that I sent to LoTW and it went through fine. It was exported as ADIF
from Logic 6. Perhaps you can stare and compare and find something
wrong. What logging program and version are you using?

Yep, you are right on the money Mike -- I forgot about that being an unsigned field. Well, at least he can fix his data base in Logic, hi. It is a bit difficult to find exactly where the error is and it looks as if you hit it correctly when you said he was probably still on the wrong line. I went through a couple of these myself before I found the right one.

Try it and see.

ADIF is very robust so it's likely to recover.

If not, the subsequent error message may be more illuminating in
locating the trouble.

If you are getting the error message when you are signing the qsos and
you check yes to ignore the error it will continue to sign the rest and
simply list the errors as they occur. You can then scrool through them
to see what it wrong and fix it. Just don't send the .tq8 file in until
you have them all corrected.

> If not, the subsequent error message may be more illuminating in
> locating the trouble.

Is it wishful thinking to display the complete "offending" record
and/instead of the line number. Since all records end in <EOR>, this
should be a piece of cake to implement.

This would avoid a lot (!) of trouble for unexperienced and
experienced users.

I made a similar suggestion during beta, but in vain.

There were other issues, no-one ever responded and I didn't check
anymore. Maybe, some day, if it gets stable.

Thanks to everybody for the help.

Tony the data you are referring to appears several other times in the ADIF file and has not generated any other errors. I think the space before the Letter D counts as well, which would make it 8.

In the mean time I re-ran the signing process and answered Y to ignore errors. The process generated a list of 9 errors. Each of errors 3-9 were followed with information that explained the errors. A couple were bad calls and a few were bad time formats. I used word pad and did a search for the bad record and corrected them. I then re-ran the signing process and all but the first 2 errors went away. The 2 remaining errors are the original one

Error: ADIF field name length overflow on line 16

and the new one

Error: Invalid amateur CALL () on line 16

Again looking at line 16 the call looks OK to me. Regarding the 1st error wouldn't the verbiage "ADIF field name" refer to the information before the data?

BTW as an aside I tried to use the TQSL editor and was not able to get it to function. Anyone had that problem?

You know I think I need a nap.

Julio

Nope, counting starts right after the ">" until the end of the field,
whereas the end could be spaces as well.

350. Invalid Station Information

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-15 18:14:06 UTC
From: Pawel SP7PS
Topic: 350 Message: 350

Hello Friends,

I received my certificate from ARRL yesterday. Uploaded most of my contacts as SP7PS, SP7NMW (my old call) and SN7N. There are over 1100 QSOs confirmed. Thanks a lot and glad to see each time I connect to LoTW server the number is growing up.

Now about the problem. I downloaded "QSL Report" in ADIF file. Next imported it to new log in DX4WIN to see the number of countries, zones, IOTAs, etc and found some errors. But the errors are made NOT by LoTW nor DX4WIN, but by other station errors. I checked several station with error message shown by DX4WIN and I saw, that some people filled their station details WRONG in "TQSL" Station Location.

Forgive me, I will use the real callsign but it would be better to explain. Also the listed guys could check their setup in TQSL software.

Lets see:

1. Wrong ZONE information in user TQSL Station information:
- OK2ZC filled his CQ Zone as "28 and ITU Zone "15". It should be other way.....
- Similar with ON4CAS: you filled CQ Zone"40" instead of "14"
- The same error with AF4Z, W4OX and several others - you told you live in CQZone "8".....
- There are some US stations, that DX4WIN tells it should be zone "5" instead of "4" filled by LoTW user

2. Wrong IOTA number
This error was made by user in IOTA number. For example V26TT filled the number as "100" instead of NA-100

3. Some Canadian stations filled STATE information, that are not recognized by DX4WIN. For example VY2RO filled PE, but DX4WIN doesn't know state PE.

4. Wrong COUNTY of US stations
W4OX tells, his county is MIAMI-DADE. It is OK, but my logging software doesnt know this county. It knows MIAMI DADE, without "-" mark.

Probably there are more errors in contacts and I found that they are caused by two things: operator's error in TQSL Setup and possibility to write different names of county, IOTA, etc by user. Could it be better, if TQSL includes list of IOTA, counties, etc and user doesn't fill the name manually with his own names but choose the right name from the list? That way would be less different names or mistakes.

See, what will happened if all datas send to LoTW are not verificated by ARRL staff. I could eccidentialy write my CQ Zone as "1" (instead of 15). All European stations I worked RTTY 80 mtrs are happy, that zone "1" is worked and confirmed this band and mode. Will ARRL accept this "zone 1" for award? Probably yes, because noone will chech hundred thousents contacts for errors caused by wrong station location.

Just for grins I deleted the whole line 16 from the ADIF file and ran the signing process.

The same errors appeared. I examined the lines before and after line 16 and still can't find anything.

I wonder if I should delete this ADIF file and create another and see if it goes away.

Does anyone know what DX4WIN uses to key this? Does it use the state
or the call sign?

> 2. Wrong IOTA number

In this case don't blame Canada :-) (or Canadians).

This is definately an LoTW "feature". Here LoTW adheres to the
proposed ADIF 2.0 convention that is not entirley backwards
compatible with ADIF (1).
>
> 4. Wrong COUNTY of US stations

> W4OX tells, his county is MIAMI-DADE. It is OK, but my logging

> It knows MIAMI DADE, without "-" mark.

From where does the software get it's county names? ;-)

I believe LoTW takes the county names from Federal Information
Processing Standards Publication 6-4.

Again, is the USA-CA Record Book copyrighted?

> Could it be better, if TQSL includes list of IOTA, counties, etc
> and user doesn't fill the name manually with his own names but
> choose the right name from the list? That way would
> be less different names or mistakes.

tQSL already does exactly that for US Counties (based on the
aformentioned FIPS list). And Oblasts as well.

Are there no potential copyright issues with IOTA or USA-CA?

> See, what will happened if all datas send to LoTW are not
> verificated by ARRL staff.

Or software... right now zero effort has been expended implementing
any quality control checks for non-ARRL award counters like CQZ or
ITU-Z or IOTA because there's no immediate "award" customer.

> I could eccidentialy write my CQ Zone as "1" (instead of 15).
> All European stations I worked RTTY 80 mtrs are happy, that
> zone "1" is worked and confirmed this band and mode.

> Will ARRL accept this "zone 1" for award?

Since ARRL doesn't issue WAZ awards and and is unlikely to begin
doing so that quesition is moot.

I assert that CQ certainly won't accept that zone 1 confirmation
right now :-)

But the extra QC cross-checking to make LoTW confirmation acceptable
to CQ can be added at any time.

73,
Mike K1MK

From: Julio Peralta
Topic: 63 Message: 355

Well I have good news and bad news.

I went through my log and made the changes permanent that LOTW signing process pointed out. Except the 2 messages regarding line 16 which I couldn't be found. I exported my log as a an ADIF file and ran the signing process again. BINGO NO ERRORS. This is the good news.

The bad news is the TQSL signing process as it exists today can generate some phantom errors.

Can you believe I spent most of my day working on this. It just goes to show what a good nap can do.

Thanks again for all the help. I hope my problems were some what helpful in helping all of us learn this new process.

Julio, W4HY

Hi Phil

If you are bored, you can change the station location to add the zones and load the logs again. If, as they should be, the time/date/mode/band stay the same the data will be replaced with the new data that has the added geographics attached.

I don't think it is worth your time in this instance, because the zones will be confirmed many times over for most award seekers.

If someone really wants your zone, and they ask you, you can make a single QSO file and sign it and send it in.

You should edit the station location now anyway, for future use.

73, Dave, NN1N

Phil, I believe if you correct the error and add the zone data and then upload the file again it should add the missing info etc. Be sure to use the same filename....You can not do any corrections at the LoTW itself.....

Mike,

The information (zone, state, county, etc.) is entered
by the user in the add/edit locations set-up in tQSL.
It is not generated by the user's logging program.

Miami-Dade is the proper designation (and it given in
the tQSL text box).

The issue with ITU/CQ zone is that most of us are used
to thinking of CQ zone first and ITU zone second while
the tQSL application asks for ITU zone first. I made
the same mistake my with my first set of uploads ... and
simply edited all of the station locations and re-uploaded
the logs to replace the "bad" data.

Pavel, thanks for the PSK31 confirmation with my old
call (W8IK).

73,

... Joe, K4IK

Julio :
seems to me that the space could be removed and the count changed and it would go.
you might try it.
talk about trouble i have been trying for over a week to get my first file to load. each time i get an upgrade for lotw i can get a few more to take. i am running Paper Chasers Log. which was the old DXLOG. I think the adif file in the log may be putting just too much info into to adif file for tqsl to handle. any why i get date errors call errors and a few misc now. this call sign error is something else i have looked at the file a dozen times and the calls are correct. Mark is working on the adif files of his program and it will be fixed soon. i think the LOTW tqsl has a few more bugs in it then they wanted to talk about.
just to see i loaded my 336 qso i had in PCL into Logger 32 and Logger 7.09 both programs took the import. then i tried to use
tqsl hi.. out of 336 files it got 5 qso's the rest were date time call and a few weird errors.. tomorrow i will search each line by line to see if i can find what is going on.
good luck

Hi Nenad!

Sorry, I can't tell anymore if I have replied. Too many emails! (more than 3000)

Everything below is correct. If you sign each of your requests with the Ve3EXy cert you won't have any problems with the awards, they will be grouped together. We expect this issue and will plan for it accordingly. Same for QSL manager's clients.

73, Dave

-----Original Message-----

Subject: Re: [ARRL-LOTW] Expalnation of how LOTW REALLY works?

Dave,

Use of special prefixes is common in VE. On top I organize
local expeditions all within single 'entity'=VE.

VE3EXY (home location Ottawa)
VE3EXY/2 (CQ zone 2, Quebec=VE2)
CK2/VE3EXY/p (IOTA NA-128)

more to come ....

I understand I need one certificate for each special prefix
/call, otherwise I will not be able to make my logs available
for special_px/ portable operations through LoTW.

Obviously, I would like them all to feed one single Award 'account'
which I probably can do through award application form (quote another
calls used), rather than through LoTW itself.

In return,LoTW would, calculate credits independently, for
each certificate. Correct?

QSL managers, multiple individuals using the same contest call,
visiting operators, and QSL card printers (as defined in article
http://www.magma.ca/~ve3exy/new_lotw.html) will be the other
cases where multiple certificates are needed . Most likely
on the same machine.

73 Nenad VE3EXY ...

"Patton, David NN1N" wrote:

I don't know what ARRL's reason for not allowing more than
one cert per call. There can only be one certificate for each callsign over the same date. As Hamish, VK3SB pointed out, we don't want two certificates out there for the same call and date range (it can't happen anyway).There are a couple of occurrences where we expect to issue certs for the same call, for different date ranges, to different people: Contest calls like VP2E, VP5B, PJ2T, etc. That's why we stress the importance of not guessing on the start and end dates when one makes a certificate request. I can think of good reasons to have more than one
cert. ie: QSL managers. I would not want to give a QSL manager my
private key, but I would be willing to digitally sign a certreq for him
to be a QSL manager. To me this would be the best of both worlds if the
QSL manager also had to sign the certreq, then if there was any question
about fraud then they would know who signed the tQSL.Yep, QSL managers can obtain certificates for the calls they manage, and definitely they must sign those requests with their own certs. ARRL also wants to see a letter of authorization, sent via postal mail from the client station, that says the manager is OK to put data in the system.

Keep in mind something like the LoTW has never been done before and it
may lead the way for a whole new form of ID based upon digital
signatures. This project has been public for less than a month and there
is going
to be problems here and there. In a year things will have changed, what
I don't know, but I am sure they will.RR Darryl. You've done a FB job with the email--thanks for the help.73, Dave, NN1N

Hi Nenad!

Sorry, I can't tell anymore if I have replied. Too many emails! (more
than 3000)

Everything below is correct. If you sign each of your requests with the
Ve3EXy cert you won't have any problems with the awards, they will be
grouped together. We expect this issue and will plan for it accordingly.
Same for QSL manager's clients.

73, Dave

Now that they are all grouped together, how about the case where they
should not be, such as for WAS where all must be made from within a certain
mileage radius. They are all good for DXCC, but not WAS. I expect you ought
to upload with a different station location for nay that are in a different
location. I see no other way to handle this?
If your contacts were never to be used for such an award then the precise
location would mean nothing, but this is unlikely :-)

Subject: Re: [ARRL-LOTW] Expalnation of how LOTW REALLY works?

Dave,
Use of special prefixes is common in VE. On top I organize
local expeditions all within single 'entity'=VE.

VE3EXY (home location Ottawa)
VE3EXY/2 (CQ zone 2, Quebec=VE2)
CK2/VE3EXY/p (IOTA NA-128)

more to come ....

I understand I need one certificate for each special prefix
/call, otherwise I will not be able to make my logs available

for special_px/ portable operations through LoTW.

Obviously, I would like them all to feed one single Award 'account'
which I probably can do through award application form (quote another
calls used), rather than through LoTW itself.

In return,LoTW would, calculate credits independently, for
each certificate. Correct?

QSL managers, multiple individuals using the same contest call,
visiting operators, and QSL card printers (as defined in article
http://www.magma.ca/~ve3exy/new_lotw.html) will be the other
cases where multiple certificates are needed . Most likely
on the same machine.

73 Nenad VE3EXY ...

"Patton, David NN1N" wrote:

I don't know what ARRL's reason for not allowing more than
one cert per call. There can only be one certificate for each callsign
over the same date. As Hamish, VK3SB pointed out, we don't want two
certificates out there for the same call and date range (it can't happen
anyway).There are a couple of occurrences where we expect to issue certs for
the same call, for different date ranges, to different people: Contest calls
like VP2E, VP5B, PJ2T, etc. That's why we stress the importance of not
guessing on the start and end dates when one makes a certificate request. I
can think of good reasons to have more than one
cert. ie: QSL managers. I would not want to give a QSL manager my
private key, but I would be willing to digitally sign a certreq for
him
to be a QSL manager. To me this would be the best of both worlds if
the
QSL manager also had to sign the certreq, then if there was any
question
about fraud then they would know who signed the tQSL.Yep, QSL managers
can obtain certificates for the calls they manage, and definitely they must
sign those requests with their own certs. ARRL also wants to see a letter
of authorization, sent via postal mail from the client station, that says
the manager is OK to put data in the system.

364. LoTW report ???

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-17 00:51:31 UTC
From: R Johnson
Topic: 364 Message: 364

Hi:
Now that Lotw has given us an ADIF report of our confirmed QSO's
does anyone have any suggestion on how to use it ???

If you haven't seen it yet, log onto LoTW and click on "Your QSO's"
then on the left side of the screen you will see "Download Report".

When the report screen comes up you can choose the start date for
the report and if you want QSL Details.

My suggestion is to start with your first license date (that's in your cert)
and to select "QSL Details".

This is a sample of the first Header and first QSO in my file,

ARRL Logbook of the World Status Report
Generated at 2003-10-16 13:48:47

I've been out of town on business and found this new feature during my travels. My plan is to create a new logbook in DXBase 2004 and then import the ADIF file into it. This way I will have a log of all confirmed QSOs and be able to track awards via the DXBase program. I'm sure any other logger can do the same.

366. Re: LOTW report ???

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-17 01:25:19 UTC
From: Dave Bernstein
Topic: 366 Message: 366

The information in this report allows logging applications to synchronize with LOTW. This can be as simple as importing and displaying the ADIF. My intention in DXKeeper is to track LOTW status for each QSO, independently of hardcopy QSL status and eQSL.cc status. DXCC/Challenge award tracking will count any QSO confirmed by hardcopy or confirmed via LOTW.

From: Joe Subich, K4IK
Topic: 129 Message: 368

Can anyone give me a reasonable explanation why the
"Download Report" (ADIF) does not contain the frequency
only the band (even when selecting "include QSL detail")
but it is given in response to an online query?

It seems that the download report should provide all
data in the record, particularly if the "include detail"
has been selected. Until the various log publishers
complete their interfaces, it's nice to be able to
import all the available data into a separate log for
recordkeeping purposes.

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-18 07:12:58 UTC
From: Dave Bernstein
Topic: 369 Message: 369

1. in TQSL, make a fast first pass that scans for and reports all errors; if there are no errors, or if the user wants to proceed then initiate the more lengthy second pass that does the signing.

2. if you publish TQSL's criteria for "valid amateur callsign", logging applications can help users avoid logging callsigns that LOTW won't accept.

You cannot copy it but you can get open office. It is a free office suite that will read an save Excel sheets. I can't remember the address but do a goggle on Open Office and you will find it. IT is a BIG (Abt 60meg) download but when you get it you can be free of Microsoft Office.

If you only need to view the sheet, there are free readers for Excel. I think you can get them at the Microsoft Web Site. The download would be MUCH smaller, but you can only read the data.

372. testing synchronization with logging applications

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-18 18:13:19 UTC
From: Dave Bernstein
Topic: 372 Message: 372

LOTW team:

Exploiting the nice new downloading mechanism you've provided for logging applications to synchronize with LOTW requires adding some substantial functionality to those logging applications. As a logging application developer, I'd like to be able to test this functionality before inflicting it on users. While I am a registered LOTW user and have uploaded ~15K QSOs, I am reluctant to use my own account for testing. Even if I weren't hesitant to do so, I don't see a way to clear all my uploaded QSOs and start over, as is required to verify each the many scenarios that users will encounter.

Can you establish test accounts for use by logging application developers and provide us with the necessary control over these accounts?

73,

Dave, AA6YQ

tQSL is Open Source so the criteria that it tests for are right there to be
read by all.

Currently tQSL considers that a "valid amateur call sign":

1) Is composed only of the characters [a-zA-Z0-9/]
2) Contains at least one letter ([a-zA-Z])
3) Contains at least one digit ([0-9])
4) Is three (3) or more character long
5) Does not have '/' as the first or last character

The bad call checking in tQSL can be switched off in Preferences if it is
necessary to sign a log entry for WAR or RAEM

Thanks, Mike.

Putting 40 files of uncommented source code "right there to be read by
all" isn't a particularly effective way to make this sort of information
available, but if you're willing to answer such questions I'm a happy
camper.

I think that the matches required are call/date/time (within the window)/band and mode. I think everything else is not required to match.

Not only are signal reports not required for match, RST sent/rcvd
is not uploaded to the server.

tQSL only reads, signs and uploads the values from a small number of
fields. In the case of an ADIF file, tQSL only recognizes the fields:

QSO_DATE, TIME_ON, CALL, BAND, FREQ, MODE,
PROP_MODE, SAT_NAME, BAND_RX, FREQ_RX

the values for all other fields including RST_SENT and RST_RCVD are
simply ignored by tQSL.

Read through the input file but skip the signing and don't write
the .tq8 ouput file.

Generation of a digital signature for each record is the slow step.

Thanks Mike, I uploaded a lot of QSO's, some of them with "out of range" errors. I would have liked to have stopped right there and correct the errors, but didn't know that I could. I will probably have to re-submit the whole file for each of my calls, having now corrected the flagged items and hope that the ARRL server doesn't mind the duplications. Thanks for your comments.

73, Carl VE9OV

Thanks for good news re rst.
Now about field headings-mine read DATE instead of QSO_DATE, TIME instead of TIME_ON,FREQ instead of BAND. Will I have to change these and will the software automatically change the freq to band?
Bill W5EC
Not only are signal reports not required for match, RST sent/rcvd
is not uploaded to the server.

tQSL only reads, signs and uploads the values from a small number of
fields. In the case of an ADIF file, tQSL only recognizes the fields:

QSO_DATE, TIME_ON, CALL, BAND, FREQ, MODE,
PROP_MODE, SAT_NAME, BAND_RX, FREQ_RX

I don't think there is an easier answer than this:

I use N1MM Logger (I don't do Sat QSO's so don't know if it has the fields. It will have the key fields you need CALL BAND MODE DATE TIME_ON. It couldn't be simplier. It's free. It's fast and builds the ADIF file - do export - ADIF.

Use the DX "Contest." It's for general QSO logging, but has limited fields. You can do separate DX Contests for a date of entry and upload the ADIF for that date. That way you can break down your work.

Most word processors should allow allow looking at the ADIF file.

I use Microsoft Word.

If you want more info in your log use any of a number of log entry programs... See eham.net for reviews...

OOPS - Please ignore my previous post on N1MM.

The program requires editing the log for date, time, and freq, after
entering the QSO (which uses current date time and freq of the radio.

I need another cup of coffee!

Leo,

What version of Hyperlog are you using?

Starting with version 4 you can save your file as an ADIF file.

The field headings that appear in your Excel spreadsheet are not a
big issue. But that's becuase tQSL can't read Excel directly.

You are going to have to convert the data from the spreadsheet into a
format that tQSL does recognize, either ADIF or Cabrillo.

What matters are the field names in the ADIF file that's created in
performing the Excel -> ADIF conversion. It's within the ADIF file
the field names must be QSO_DATE, TIME_ON, etc.

> Will I have to change these

That'll depends on the details of the tools you use for converting
the Excel over to ADIF.

> will the software automatically change the freq to band?

One of FREQ or BAND must be present; both may be present. When BAND
is not present tQSL infers a band from the frequency.

73,
Mike K1MK

400. What frequency format?

The ADIF spec calls for the value of the FREQ field to be given in MHz

> 20 meter RTTY example, 14.08000 or 14080.000 ?

In an ADIF file it should appear as <FREQ:8>14.08000

I am using N3FJP's logging program which logs band only, ie, 160, 80, 60, 40, etc. The program dumps to an ADIF File, and LOTW accepts that data with no problems.

Most likely that the arrl TrustedQSL will go by the location entered
by the station uploading the log and then will go by that info?

A lot of information left out in the help files, guess the author of
the software thinks we are to understand or know what we are doing?

Found that ISS Packet contacts were not supported and wrote to the
help@lotw, guess that ISS will be added to the satellite list in the
future.

A lot of things would be nice to have with editing QSO's.
Like one has 2000 QSO's on the adi log file and there is an error on
line 1100 or somewhere in the middle, one has to click on the > 1100
times to go to that QSO and enter the correct info. Finger gets sore
doing this. I know someone on the list suggested a appliaction to edit
line numbers, but why can't we enter the QSO' number in the "box"
direct and correct the info? Think the software could be a little
more "user friendly", IMHO ;)

Gil,
I don't really think that is the case.
When we enter the data for our "STUFF",
it asks for state and county. If people choose
not to enter this info, so be it. But It ain't
gonna do a lot for folks that want to do
WAS or 5BWAS.
I would think that would be required.
Just MHO.

From: Mike Mellinger WA0SXV
Topic: 403 Message: 408

State/County/IOTA/zones have nothing to do with the certificate. They have to do with the location information that is entered in addition to the certificate. For US stations, state/county/zones should be mandatory and trigger rejection within the TQsl signing software. It doesn't. Correcting merely involves using the same ADIF file, updating the location to include the more specific data, signing, and downloading. Not a big deal.

410. how to log county line QSOs?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-25 22:58:02 UTC
From: Wayne Wright
Topic: 410 Message: 410

I think I understand that if I operate on a county line, that I have to submit each QSO to LOTW twice--once for each county (and that I have to fudge the time for the second submission so that it doesn't replace the first in the LOTW database).

What happens if I am the other station in the QSO and also submit my log to LOTW? Does the LOTW show two QSLs for my single QSO? or do I have to submit two different QSOs (even though, as far as LOTW is concerned, I have nothing different to report on my second QSO--the LOTW format does not have me report the other guy's QTH--just my own).

They should be good for a year. What year does your computer say it is?
Do your log entries say 2004?

I've seen that happen when the original certificate request had an
expiration date.
Bring up TQSLcert and select the certificate that corresponds to your
callsign.
Then, use the "Certificate/Properties" menu selection to view the valid
date for that certificate. By default, it will be valid for one year
from when you submitted the request *unless you gave an end date*.

If you have a cert that's already expired, you can request a new one.
Select the expired cert, then the "Certificate/Renew Certificate" menu
selection. Make sure the "QSO End Date" on the request window are
blank. (QSO begin date from whenever your callsign was issued, end date
of nothing.)
Upload that cert request to ARRL and they'll give you a new cert valid
for a year - no need to go through the identify proof again.

I imagine the expiration is covering for someone who trades in their call
for a new one. The new holder of the old call (when it becomes available
for reissue) could not get a certificate if the one from the first holder
never expired.
Just my idea of why it may be done this way.

No, it's good sense. It means that if your private key is compromised
without you knowing it, it can only be used for at most one more year
before it expires.

As to how your key could be compromised, are you running a good firewall
while you're connected to the Internet? Are you running email and web
clients which are not virus incubators? (ie not Outlook and Internet
Explorer?)

Then "one year" seems a peculiar choice. If a compromised key can be used to cause serious damage, wouldn't "one week" or even "one day" be the more reasonable interval? If allowing compromised keys to persist for a year is ok, why is five years not ok?

It's a trade-off between security and convenience.
It wouldn't be convenient to update your certificate every day or even
every week, but annually is reasonable.

C'est dommage... we didn't work, or at least not in the 77K QSOs I've
entered. It was gratifying, though, to download the ADIF report of the
2000 or so confirmed QSOs I have to date and see that DX make up a majority
of new confirmations over the last 10 days.

WoW! You are certainly doing better than I am. Of the 953 I have uploaded, I have 29 confirmations. But that's OK, it's a lotta fun. As you can see from my participation in the last contest, I'm not much into it, however, I'm likely to participate significantly more in the CW portion, and also the propagation on 80 & 160 should improve by then. Congratulations!!!!

The specification of a one year period of validity as opposed to reasonable alternatives is arbitrary to a fair degree.

In it's defense, a one year validity period is an interval that is well aligned with industry "best practices"; annual renewal is provided for in the certificate policies of a majority of Certifcation Authorities. However it is certainly possible to find counter-examples of CAs having renewal policies of six months or two-years, etc.

> If a compromised key can be used to cause serious damage,
> wouldn't "one week" or even "one day" be the more reasonable

> is ok, why is five years not ok?

The technical motivation for enforcing a maximum key pair lifetime via certificate expiration is to limit the length of time a key pair is in circulation and subject to compromise via direct attack by an external attacker.

Of course a successful attack by factoring of the public key/signature is already extraordinarily improbable even without setting a time limit on potential adversaries. On a purely technical basis the maximum desirible key lifetime would be specified in terms of decades and not years.

The ubiquity of annual renewal that one finds amongst other CAs can be attributed to business or administative concerns more so than a technical requirement. For LoTW there would not have been any serious technical objections raised to making certifcate validity concurrent with license term as an example.

The much more likely means of key compromise is an outside agent gaining unauthorized access to the machine on which the user's private key is stored. In this case the renewal interval doesn't help very much in compartmentalizing the damage. If the user's computer has been compromised, renewals must also be viewed as having been compromised. And all data signed by the user would have to be treated as suspect.

Thanks, Mike, I understand. Perhaps LOTW will consider a longer renewal period -- say 10 years -- once they become more comfortable with the security model. Unlike businesses, most hams don't have admistration departments to handle such things. One year is just long enough to have forgotten how you did it last time...

It is absolutely trivial for a Trojan horse that substitutes itself
for tQSL/tQSLCert to capture the pass phrase and decrypt the key.

Well, if the key owner is active they will renew it themselves upon
expiry. If it's been renewed by the attacker already it should become obvious
and it can be sorted out manually, perhaps by following the original
authentication process again.

The risk is that the original key owner stops using it, and the attacker
renews it.

Well, the renewal doesn't have to be difficult, especially once
TQSL/TQSLCERT functions are integrated into logging programs.

Also, amateur radio is a technical hobby and I hope that it's reasonable
to expect some technical proficiency. I don't find "it's difficult" to
be a very compelling argument.

Sounds like your certificates are from the beta program. That system was wiped from existence when LoTW went live.

You need to start all over again - get a new certificate and then sign and send ALL of your log.

431. Mobile Operation

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-28 01:31:41 UTC
From: Bill Metzger
Topic: 431 Message: 431

I've been following the messages for some time and also sent an (unanswered) message to the ARRL. I routinely operate mobile from my car and have been recording all my QSO's. With the LOTW, how do I get these mobile contacts into the logbook and keep them separate from my home QTH operation. I recognize that the DX contacts count either way, but the WAS ones will not since many are from adjacent States.

Haven't seen this addressed clearly. Any suggestions?

Thanks in advance.

While it's true that you can't use a beta certificate any longer,
there's no evidence here that "obrienaj" ever used the beta LOTW. I
have helped people who entered an expiration date when they requested
their production LOTW certificate since it's not clear that you
shouldn't enter any date there. Using the renewal procedure fixes that,
and won't cause you to lose anything. I'm assuming that LOTW will
reject renewal requests signed by beta certificates - THEN it's
reasonable to start over.

Is the certificate you're using a new one, generated from the
production LOTW?
If so, you probably entered an end date when you requested your LOTW
certificate. Just generate a new certificate request like I described
recently.
Again, you can tell the date range that your certificate is valid - use
TQSLcert, select the certificate, then use the "Certificate/Properties"
menu selection.
If it's a real LOTW cert, use the "Certificate/Renew Certificate" to
generate a renewal request that you can upload to the LOTW web site.

You are correct Rick , here is what my certificate says.

Valid: 2003-09-25 00:00:00 - 2004-09-24 23:59:59
Call sign: K3UK
DXCC entity: UNITED STATES OF AMERICA (291)
QSO Dates: 2003-05-16 00:00:00 - 2003-09-19 23:59:59

I did go to the "request new certificate" area of the software and
it tells me that K3UK already has a certificate, should I delete
that and submit a new request?

No, you want to renew your existing certificate. Renewal uses your
current certificate to verify the request for the new one - if you
delete the existing certificate, you won't be able to use it to sign
the new certificate request.

Start TQSLcert. You should see a window with a list of all your
certificates (which may be only one - I've got certs for operations
outside the US as well as my old call.) Click on the certificate for
K3UK to select it.
Then, click on the "Certificate" menu entry. On that menu, select
"Renew Certificate".
You'll get a window with "This will create a new certificate request
file" in the title. Click "Next" to proceed.
Set the QSO begin date in the next window to the start date of your
callsign.
Leave the QSO end date blank - this is VERY important: if you enter a
date here, that's when the certificate will expire. Leaving it blank
gives it a one year lifetime.
Click "Next" to proceed. Enter your name and address in the address window.
Click "Next" to proceed. Enter your email address.
Click "Next" to proceed. Enter the password for the new certificate's
private key.
Save the certificate request somewhere (probably to K3UK.tq5).
Log in to the LOTW web site at <http://www.arrl.net/lotw/> and click
the "Upload a certificate request" link. Upload the file you created
earlier to register your new certificate. You'll get an e-mail message
with the response, which you can then load into TQSLcert to give you a
new cert, good for another year.

Whew!
Hope this helps..

Yes that is true IF you allow Trojans and if you are on the internet with
that computer. But that is up to the user. If they have access to your
machine they can do anything.
You must think this is important to anybody that they would go to that
trouble.

"Its difficult" is your characterization; I'd have said "its annoying": remember which program to use, remember which password to use, remember the URL with which to upload, remember to process all of your certs, etc. The requirement isn't technical proficiency, its administration.

I went through something similar.

I operated the Florida QSO Party earlier this year mobile from 12 different counties, and signed my call as NJ4M/xxx (xxx being the 3 letter county abbreviation). Some stations logged us as just NJ4M and others logged us as NJ4M/xxx.

I already had an NJ4M certificate, so I signed and uploaded a log from each county we operated in. This would give credit to those who logged us as NJ4M.

Then I got a certificate for NJ4M/xxx (for each county we operated from), signed and uploaded those logs from each county. This would give credit to those who logged us as NJ4M/xxx. Both calls have generated QSL's.

If you signed differently, you might want to do the same. If you used the same call, then you can use one certificate for the call you used, but "sign" it from each different county/state you operated in. There is some work involved sorting them all out, but once you do it the first time, adding to those logs later should be pretty simple.

There might be a better way ... but that's how I handled our mobile logs.

I'm sure you can automate that in your logging software.
It might be a nuisance to do in TQSLCERT but there's no reason to think
every user will have to use that.

The talk about Certification expiry made me wonder if I need to renew for a log I've uploaded but will never again need entries.
I uploaded my WN9VOL log from (ahem, lets just say a long time ago).
Haven't gotten any qsl's as yet. (ahem, probably most of the contactees have gone to the big sunspot in the sky)

But seeing as it won't be added to, do I have to renew that cert?

I wouldn't think so. The certificate should only be used to verify QSOs when
uploaded, and since you won't be doing any more uploading..

445. LotW as substitute for bureau QSLing

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-28 12:07:36 UTC
From: Pete Smith
Topic: 411 Message: 445

As an active contester, for several years I have followed a policy of QSLing, via the bureau system, all DX QSOs that are the first with that station on each band/mode combination. This is done to reduce the time required to look up and answer each received bureau QSL individually.

With the advent of LotW, I am thinking of adopting the following practice:

All QSOs, both domestic and DX, will be reported to LotW monthly. No more "pre-emptive" bureau cards will be sent. I will respond to QSL requests sent direct. When postage is included, I will reply directly. When it is not included, DX cards will go via the bureau system, and domestic cards will go as postcards.

I'm particularly interested to know how this strikes non-contesters. The people who get into contests to work DX or accomplish award goals are crucial to the success of contesters like me, and I don't want to turn anyone off. I'm interested in cutting down on "overhead" while, at the same time, making sure that anyone who wants credit for a QSO with me can get it.

If I did such a thing, I would put the word out during non-contest QSOs, and also add a line across the bottom of my cards that says something like "all QSOs may be confirmed via ARRL's Logbook of the World -- www.arrl.org/lotw/default."

What do you think?

I can identify with that...

Every time we switch between DST and EST one has to re-set many
electronic timekeepers... It seems every one has a different method of
doing it. None are particularly challenging, but it is irritating...

It would be nice if certificate renewal was automated...

>from), signed and uploaded those logs from each county. This would give
>credit to those who logged us as NJ4M/xxx. Both calls have generated QSL's.

Here's how I'm doing it from the "receiving end" of the state qso parties -

I've used NA for contest logging since 1996. I usually used the CALLSIGN/CNTY
format when logging in order for the duping algorithm to function correctly.

I am going back through the logs and using NA to edit out the /CNTYs, and
regenerating the ADIF files for submission to LoTW. I'm making the
assumption that,
for example, W1AW/CUMB will be submitting logs as W1AW, and attaching a
station
location as Cumberland (or whatever) county to the log file. If their log
is submitted as
W1AW/CUMB, there will be no qsl.

The only question that remains is if the station location attached to the
signed ADIF
will negate the cancelling effect that LoTW places on qsos within the same
time window.
If not, I think it should.

Note to NA users: Be sure to check the option to make "QTH must match for
dupe" before
editing your log in order to preserve the correct score. There is an
excellent article by K8CC
on the Datom web site that describes this -

http://www.datomonline.com/dtn0799.html

And of course, always make backups, backups, and more backups.

I am also going to use this same approach Pete and I hope the DX
stations will also follow this pattern. That way the confirmation is
readily available but if someone still wants card they can get one. I
am a DXer at heart but do work a few contests and I think this approach
will work best for all of us. It saves some time and money but still
makes the cards easy to obtain.

That's one reason I did it with and without the /cty designator ... to cover both ways. There are probably some who logged me with /m ... and since I have not "signed" any logs that way, those QSO's are not confirmed.

There probably needs to be a "standard" developed, so that both the mobiles and those who work them, know what LoTW expects in order to confirm the QSO. Right now, for mobiles submitting logs, it means having to submit them twice. For those working the mobiles, they're not sure what to log.

The only other choice, would be to make LoTW a little more flexible when it comes to mobiles, being able to confirm a QSO logged as either NJ4M or NJ4M/cty, if everything else matches.

451. Number of DXCC Entites Confirmed on LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-28 21:12:23 UTC
From: Pawel SP7PS
Topic: 451 Message: 451

Hello LoTW Users,
Is there someone with confirmed 100 or more entities on LoTW? After few weeks and uploaded ~51000 contacts my summary is 54 entities, 44 US States and 23 WAZ zones. What is your score?

Okay...

But that is exactly the point that hamish was making originally to which you responded: "If you use a strong pas phrase your key CANNOT be compromised, period."

So which do you really think it is?

This is and will continue to be the problem. LOTW is a good concept but if everyone does not upload the log then it will turn out to be useless except for specific events like big contests. That means you get your QSL for the contest contacts much easier then before. IT is of course useless for scoring, why pay for than when you can just send you Cabrillo?
With mail you go after the exact stations you need and you try to get them to respond. That can be hard and expensive. With LOTW you just HOPE everyone you need uploads, a forlorn hope for now. I hope it succeeds but I am not hooding my breath.

Hi Pawel -- How did you determine this? The hard way, looking at each QSL
to determine zone and entity?

73, Pete N4ZR
The World HF Contest Station Database was updated October 3.
2440 stations are listed -- 104 stations were added or updated.
Are you current? www.pvrc.org/wcsd/wcsdsearch.htm

Hi Pete,
The way is easy. Open LoTW web page, log on and go to "Your QSOs", next press "Download Report" button. Window with ARRL World Status Report is generated. Select all contacts and information from this window and save it as text file using Worldpad. Next rename this text file from "xyz.txt" to "xyz.ADI". After that import the contacts from ADIF file to logging software, in my case DX4WIN. That is all. Fast and simple. All information about Entities, Zones and States are just from DX4WIN.

I think if you use a strong phrase and if you make sure you have no Trojan or use a firewall to block the outgoing signals form the Trojan that you cannot be compromised. Furthermore I think it is not important. I think the whole business of military security is vast overkill. I think that if LotW does not make it (I hope it does make it) that the complexity will be one of the biggest causes.

I guess I don't see the "problem" Gil.

I've uploaded about 25,000 QSO's, and after only about a month into the program I have just over 1,000 matches, or about a 4% return, at precisely $00.00 cost to me.

I haven't taken the time to tally how many 'entities' or states or zones or grid squares or IOTAs or counties are represented, but it's quite a few. One of the DX matches I have is for a country I've spent perhaps $10.00 trying to snag via various routes, and now I can get credit for a measly 25-cents! Quite a bargain, I'd say.

I'm sure LOTW won't completely displace paper cards (and I don't even think I'd want it to), but it sure will be a nice cheap and painless way of augmenting the traditional methods.

So where's the "problem" your jeremiad alludes to?

You're right -- it was a snap. Thanks! as a DX4WIN user, it took me all
of 3 minutes to come up with:

2003 confirmations (72K QSOs)
54 DXCC entities
48 states
21 zones

Wonder who'll be the first ARRL-LOTW reader to get A-L DXCC?

There is no problem. It may work fine for you. The problem is that if the ones you have contacts with don't send a log then you do not get a match. I hope everyone does. I hope it works. I just don't think it will be of much use for prior contacts for many people. I don't have anything close to 25000 to upload so it won't help me that much. The entities that never replied to me are probably not going to upload so it means I have to give up or try postage again.

I really do think it is great if you get this low cost response, it is the idea of the thing and it just may work, if you are very active and the ones you work send a log. The problem is that you are hoping to have people send a log in the hope that they will benefit rather than depending on specific requests for a qsl from specific people. If you get 4% response of worthwhile cards that is good but not great. That is the whole thing. If you don't get a lot of entities or other award items then it did not help you much. Who cares about confirmations of casual QSOes this way. I would much rather have a paper card for the friendly chat if they want to send one. The LotW entry means nothing. It is very important for everyone to thin that every contact should go up as it can be important to someone. You just don't know. Many are not going to bother, they don't even log at all, much less log on a computer, so those are lost.

If you could load the .adi file into Excel, it would be easy to sort, but
the format does not seem to lend itself to that, or anyhow I can't figure
it out. One way to do it would be to load the whole thing into DX4WIN (if
you have it) or some other converter and re-export as CSV format, then load
THAT into Excel and sort on OwnCall, then extract the data and convert back
to .adi format. PITA, that....

I double-checked myself, and unfortunately DX4WIN can only write CSVs (so far as I can tell) from a logbook report that is generated from its own log files, and does not include the data about your own call. I think this means that you'd need some sort of direct .adi to CSV converter, and I'm not aware that there is one out there. Maybe someone else can help.

The call is indicated by the ADIF 2.0 field <APP_LoTW_OWNCALL:n>
You can use open the "lotwreport.adi" file in Notepad, search for
"APP_LoTW_OWNCALL" and replace it with "Operator" and save the
file. Then import the resulting file into DXKeeper which supports
multiple calls in a single log (www.qsl.net/DXLab)

You might also look into LogCONV (http://www.qsl.net/ka5wss/logconv/)
The documentation seems to indicate LogConv will convert ADIF to
Cabrillo (fixed width records). It might be possible to do ADIF -> CAB
and then import the CAB file into EXCEL. I haven't tied that approach
since I'm using DXKeeper/DXLab.

After you import your ADIF into DXKeeper, you can filter the Log display to show only QSOs made with a specific operator callsign and then export an ADIF file containing only those QSOs.

For those needing to slice and dice logs, DXKeeper provides filtering driven by SQL queries and the ability to make bulk changes on the filtered subset. Like all DXLab applications, DXKeeper is free.

Hi all,

On the latest DXCC AWARD APPLICATION form on the ARRL website, there is a box at the top left, just under the award chart, that asks if you want them to "Check for LOTW QSL's on the web". It then says that you MUST AUTHORISE THE USE OF LOTW QSL's by going to the website.

Can someone please tell me where I give this permission? I cannot find ANY mention of this on the LOTW website at all.

Subject: LotW as substitute for bureau QSLing

As an active contester, for several years I have followed a policy of QSLing, via the bureau system, all DX QSOs that are the first with that station on each band/mode combination. This is done to reduce the time required to look up and answer each received bureau QSL individually.

With the advent of LotW, I am thinking of adopting the following practice:

All QSOs, both domestic and DX, will be reported to LotW monthly. No more "pre-emptive" bureau cards will be sent. I will respond to QSL requests sent direct. When postage is included, I will reply directly. When it is not included, DX cards will go via the bureau system, and domestic cards will go as postcards.

I'm particularly interested to know how this strikes non-contesters. The people who get into contests to work DX or accomplish award goals are crucial to the success of contesters like me, and I don't want to turn anyone off. I'm interested in cutting down on "overhead" while, at the same time, making sure that anyone who wants credit for a QSO with me can get it.

If I did such a thing, I would put the word out during non-contest QSOs, and also add a line across the bottom of my cards that says something like "all QSOs may be confirmed via ARRL's Logbook of the World -- www.arrl.org/lotw/default."

What do you think?

My guess is that the form developer is a step ahead of the LoTW web developer, and this feature is not yet implemented.

Pete,

As I become more active contesting from here that's the policy I
will be following ... except domestic cards without return postage
will not be answered. In general, I expect to upload logs from
non-contest operations monthly and contest logs once they have been
sent to the contest sponsor. I hope most active contesters will
do the same.

I have a couple dozen shoeboxes full of JA, DL, G, F, etc. cards
from contests over the years ... I certainly don't need any more.
I'll QSL Dxpeditions direct (where I need the card) but I hope
most of them will upload their logs ... perhaps once the direct
cards have been answered - or after the Honor Roll deadline ...
in any case.

I had planned on going back and entering all my logs from the
late 70's and 80's so they could be uploaded. However, with
only three "QSLs" on anything that I've uploaded that's more
than five years old, it doesn't seem that it would be worth the
effort to enter 100K+ QSOs.

73,

... Joe, K4IK

I also noticed this Phil and it is very confusing. Perhaps they are talking about the actual signed QSLs but who knows. I sent an email to the folks at ARRL and will let you know what I find out about this.

Hi Guys

Everyone is doing really well! As mentioned here in an earlier post, this form is ahead of its time slightly.

Because the automation/implementation of the DXCC software isn't ready yet, we are trying to find ways to not have to charge people "processing fees" for both traditional cards and LoTW cards. So, while we aren't ready yet to apply credits 'solely' from LoTW, we are ready to 'combine' a traditional application with any credits that may be available from LoTW. Checking the new box on the form tells DXCC to look for any indicated confirmations that may be needed and are confirmed on LoTW.

Once the Awards sections get up and running together it will be easier.

73, Dave, NN1N

Was down in South America for a week, so am getting caught up with the email.

Hi Dave,

Many thanks for clarifying the issue for us.
Believe me, I do understand the issues you are facing with LOTW, and I am sure many of these problems didn't show up during the beta testing phase! I was part of that beta testing, and I hadn't thought about many of the issues facing us now, as I was more concerned about how to upload, whether that worked, and whether I had any confirmations.

Please don't think we are complaining! I am sure there will be many more queries in the months ahead, especially when you start processing actual and virtual cards!

Hopefully, we can all learn from the experiences, and help LOTW to find ways of overcoming problems.

Personally, I am still not sure how I will utilise the confirmations download, but that is between me and my logging software. However, I am a little concerned that some of the US stations appear to have neglected to fill in the State details, and more so about those who have incorrect Zones.

It is satisfying to see the number of confirmations growing daily, especially from some of those countries that are difficult to get confirmed in the traditional manner.

Thanks again for your reply, and I am sure we are all looking forward to seeing the Awards section up and running!

Very best 73
Phil GU0SUP

Subject: [mn-wireless-assn] LOTW and portable calls

Let's say that you work W1AA/PJ8 but that you record it in your log as PJ8/W1AA and submit it that way to the LoTW. W1AA/PJ8 submits his Q's as W1AA/PJ8.

The result--no match. I posed this question to lotw-help@... and they confirmed my analysis...no match. One would think their software could deal with this since it doesn't tax my brain all that much to see they are the same station. Of course it could get more complicated. Would W1AA/PJ8/P be the same as W1AA/PJ8? How wbout VE4AA/3 and VE4AA/VE3. Or VE4AA/K3 or VE4AA/W3. It does get messy.

After computerizing some of the old logs I noticed I had quite a few Cross Mode QSO's on the 40m band. (My CW - DX SSB). These were all made pre-1985. At the time the contacts were perfectly okay for DXCC credit. As I understand it LoTW requires that the mode entered at both ends must match for a confirmation. How can I get a match on these QSO's. The DX station will show an SSB QSO and I'll show a CW QSO?

BTW - Not many QSL's yet, but I got one confirmed from 1978 that I still needed.

>Comments?

We've been here before haven't we? :-)

A few comments:

(i) This particular rule for matching is entirely policy driven. There's no compelling technical justification for the restriction

(ii) It's fair to say that the negative response it has received could not have been unexpected. At each step of LoTW's development outsiders encountering this rule for the first time provided fairly consistent feedback: "that's a particularly dumb way to do matches."

(iii) The hard part is not U.S. domestic calls where "we" understand the status of self-assigned indicators and the rules governing them. It's the need for LoTW to also take into account the corresponding rules from 190 odd other licensing authorities. Plus these rules have evolved over time.

(iv) While it is often said that self-assigned indicators "don't mean anything", it is true that portable variants such as WN5N and WN5N/7 still do confer different WPX credit. To the extant that careless or arrogant loggers are prevalent, enforcing an exact match disadvantages those stations who attempt to do the right thing by others and submit their logs using what was signed over the air.

One final comment on the specific example of PJ8/W1AA vs. W1AA/PJ8: the operator sent his call sign the way he did (and that would have been PJ8/W1AA) because the Netherlands (or CEPT, or the ITU or some other legal authority) proscribed the manner in which the call sign shall be sent. Just as in the U.S. where W1/PJ8AA and VE8AA/W1 are specified by rule, the format for reciprocal calls signs is rarely discretionary.

A better example might have been W1AA/HI8 where the D.R.'s rules, as do the FCC's rules for reciprocal VE's, specify a call sign format that's unexpected or unintentional because it's contrary to the ITU rules.

When someone does take it upon themselves to log a call sign the way they think it should have been sent rather than what was sent, I have no strong objection to that individual having to expend somewhat more than the minimum effort in receiving a confirmation.

73,
Mike K1MK

480. LOTW - QSO Records vs QSL Records?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-10-31 20:16:27 UTC
From: George
Topic: 480 Message: 480

I just finished uploading all my logs to LOTW.

When I. Log On, I am informed that I have 9127 QSO records (these are the ones I uploaded). However, I am also informed that I have 259 QSL records. The emails that I received after processing indicated 133 QSL records and 126 QSL records for a total of 259 QSL records. Some of the "QSO record QSLs a contact" additional QSL notices were suppressed. How do I view these QSL notices? I would like to be able to update my logging program.

If I have already used the a contact for DXCC credit prior to LOTW, how will I know if it is new or old?

Hi George -- Go to the Your QSOs link on the LotW homepage and you'll find a search screen that will let you look at each one individually. As for your last question, I suspect you will have to rely on your logging program to keep track of that unless/until there's a lot more integration between LotW and DXCC.

Dave

Thanks for the quick answer. Actually I have worked all of those
Entities on other bands, and a few I have reworked on 40 meters, but
unfortunately there are a few that I could still use as new band
entities that I only have the one Cross Mode QSO with.

Oh well getting them confirmed after this much time via LoTW or any
other way was probably a pipe dream anyway.

488. Should this be changed?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-01 12:58:10 UTC
From: FireBrick
Topic: 488 Message: 488

This probably doesn't bother anybody else but:

On the home page it gives me the total of qso's I've entered and total qsl's I've received.
As I have 3 certificates for my own calls and 1 for the non USA station I manage, it totals them all up.

Basically this is useless information for me.

Wouldn't it be better to list qso's/qsl's for each certificate such as

WN9VOL 1200 QSO RECORDS & 1100 QSL RECORDS
W9OL 4000 QSO RECORDS & 3000 QSL RECORDS
YO3APJ 51000 QSO RECORDS & 41 QSL RECORDS
ETC.

Pretty sure the system can do this.

And the LoTW qsl report will probably list all logs together which is really a problem for me.
Shouldn't the report allow us to select which callsign or certificate we want the report for?

Or is this a future enhancement?

A woman's heart is a deep ocean of secrets.

Topic: 488 Message: 489

The QSL report one is easy. Go to the Query form on the Your QSO's page and select "Your Callsign", then check "Confirmed QSO's only", then push the "Submit" button.

The summaries are another story...

Subject: [ARRL-LOTW] Should this be changed?

This probably doesn't bother anybody else but:

On the home page it gives me the total of qso's I've entered and total qsl's I've received.
As I have 3 certificates for my own calls and 1 for the non USA station I manage, it totals them all up.

Basically this is useless information for me.

Wouldn't it be better to list qso's/qsl's for each certificate such as

WN9VOL 1200 QSO RECORDS & 1100 QSL RECORDS
W9OL 4000 QSO RECORDS & 3000 QSL RECORDS
YO3APJ 51000 QSO RECORDS & 41 QSL RECORDS
ETC.

Pretty sure the system can do this.

And the LoTW qsl report will probably list all logs together which is really a problem for me.
Shouldn't the report allow us to select which callsign or certificate we want the report for?

Or is this a future enhancement?

A woman's heart is a deep ocean of secrets.

W9OL, Bill H. in Chicagoland

I'm aware of that.
but that doesn't help with the downloadable lotwreport.adi
and it doesn't help with the summaries.

I do the select callsign now as I'm not really interested how many qsl's the YO3 gets. hihi
(I'm still waiting to see if I get a qsl for WN9VOL from the 60's. As yet...none)

From: Patrick Hoppe
Topic: 491 Message: 491

I was hoping that after the CQWW week-end, my number of matches would rise. So far only 2 of my 360 CQWW contacts uploaded logs to the LOTW. How has it been going for you? I am just trying to get a feel for the kind of return others are getting. eQSL has returned 12 and I haven't sent out my paper QSL cards yet - but I expect a much higher return on those.

Just Curious,

Pat

Of course the system can do that.

All it will takes is the programmer time to implement it. Make the suggestion to lotw-help@.... Let them know what you'd like to see and maybe they can get it put on their list of things to do. If it isn't there already.

>And the LoTW qsl report will probably list all logs together which is really
>a problem for me.

That is true for the "stock" report (the ADIF file) that you'll get if you press the "Download Report" button on the "Download Report" web page.

>Shouldn't the report allow us to select which callsign or certificate we
>want the report for?

Well LoTW already has the capability to produce custom reports. For example it's possible right now to have LoTW generate an ADIF file containing QSOs or QSLs for just one "owncall" rather than all of them.

>Or is this a future enhancement?

What's missing is a convenient way for the user to generate a custom query.

The web-savvy user can see how to go about generating an appropriate query URL from the docs at <http://www.arrl.org/lotw/developer/adifout.html>.

For the rest, look for it as new feature either from LoTW or outside developers.

I think you're a bit too impatient. Non-US submissions to LotW have really
picked up just in the last couple of weeks, and I expect that trend will
continue as the word gets around, but many people are probably uploading
their earlier logs first, maybe a year at a time as I did.

I'm running about 3 percent so far, mostly contest QSOs.

On the other hand many contesters don't look too favorably on the practice
of uploading contest logs prior to the log submittal deadline.

This thread is currently being discussed over on CQ-Contest.

Therefore it should not be all that surprising not to see very many CQWW
SSB logs prior to December 2.

AHHHH ... I asked this same question a couple days ago. With Mike's
information, was able to generate a report for just ONE callsign.

You'll have to type in the query string into your web browser. An
example (which would be all one line - broken here for display purposes) is:

https://www.arrl.org/lotwuser/lotwreport.adi?login=yourcall&
password=yourpassword&qso_query=1&qso_owncall=yourcall

The login=yourcall is the callsign you use to log into LoTW

The password=yourpassword is the password you use to log into LoTW

The qso_owncall=yourcall is the callsign you want to generate an ADIF
QSL report on. If you have several calls registered, use the call you
want to check.

There are other query strings you can use, but I think this is the one
most with multiple calls are interested in.

Tried it, and my "all call" QSL record went from 3,016 down to 2,190 for
one call I wanted to check, so it appears to work.

After further experimentation, the URL above does not return the QSL details (grid square, county, etc.). You must add an additional search string.

A corrected URL that will include all the QSL data for a specific call (if you have more than one registered) is:

https://www.arrl.org/lotwuser/lotwreport.adi?login=yourcall&
password=yourpassword&qso_query=1&qso_owncall=yourcall&qso_qsldetail=yes

Why , what is the problem? I can't find the group you list here. A search on Yahoo does not return it or I would have read over there.

Would it be difficult for them to create a form with a series of checkboxes
and fill-in fields? For example, in this case you'd check the qso_owncall
(or a user-friendly label for same) box and fill in the callsign you wanted
to specify.

Technically it's trivial. I'm quite sure the difficulty to be encountered
is finding enough time to get this done plus do all the other good things
that are on their To Do and Wish lists... patience ;-)

Indeed, I'm looking forward to a series of pleasant surprises from LotW
over the months ahead.

Do we need a new Q signal for "will QSL via LotW?" I've tried that on CW a
few times and have yet to get any coherent response.

CQ-Contest list is located at CQ-Contest@... !!!

Major reason stated is to prevent doctoring of logs before submission deadline.

I'm not sure how to utilize LoTW to do this, but I'm not interested in doctoring
my logs (read cheating) !!!

503. one more little browser type problem

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-01 18:08:07 UTC
From: FireBrick
Topic: 503 Message: 503

For some crazy reason, clicking on the links within any of the LoTW pages
does not always work.
I get the dreaded "Page not found" error screen.
I hit the back button, and usually, but not always, it works on the second
try.

THIS DOES NOT HAPPEN WITH ANY OTHER WEB SITE I VISIT!

I've changed mice, tried a different computer.
I've changed the mouse click speed.

It keeps happening.
I'm running winxp, on a home LAN connected to a cable modem and normally a
very fast connection.
I have a Zone Alarm Firewall.
I've tried turning off the firewall to no avail.

This even happens if I use the Tab and Enter keys...

Someone must have an idea, it's frustrating to have to make two attempts on
most of the links.

First Rule of Intelligent Tinkering: Save all the parts.

Sometimes this happens at secure sites (LOTW is a secure site) if your computer is choked up with a lot of "temporary internet files".

Assuming you're using IE, try this. On the menu bar go to TOOLS > INTERNET OPTIONS > GENERAL

On the center panel click DELETE FILES.

Works for me. Don't know why.

No Joy, I keep them clean. I'd thought of that.
Really frustrating. Only site that I have this problem.
I'm sure it's something with it being a 'secure' site.
I have some security setting too tight but not sure what it is.

506. New Release

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-01 20:30:20 UTC
From: Hans K0HB
Topic: 506 Message: 506

A MacOS X version 1.10 has been released for those you who don't have a real computer <grinnin, duckin, and runnin>.

http://www.arrl.org/lotw/mac/110/TrustedQSL_Mac.sitx

73, de Hans, K0HB

507. Is this a problem?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-02 00:35:36 UTC
From: Bill Hawkins
Topic: 507 Message: 507

My log and therefore my ADIF log has for SSB contacts, signal reports in a 5x9 format instead of 59.
Does the "x" pose a problem? Will LoTW ignore it? Do I have to go back and get rid on the "x" ? :-(
Thanks
Bill W5EC

From: Dave Bernstein
Topic: 507 Message: 508

LoTW is using the proposed ADIF 2.0 field definitions. In ADIF 2.0, the RST_Sent and RST_Rcvd fields may contain numbers and letters.

According to the FAQ -- https://www.arrl.org/lotw/faq -- and posts here by LoTW deveopers, contents RST fields are not considered when matching QSOs.

I don't think you need to edit your log, Bill.

509. ADIF report enhancement request

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-02 01:13:52 UTC
From: Dave Bernstein
Topic: 509 Message: 509

Since the matching of satellite QSOs depends on PROP_MODE and BAND_RX
or FREQ_RX, it would be helpful if these fields were included with
the returned QSO data.

Ok, I give up.

Three weeks and no postcard from the ARRL.

I must have screwed something up but how do I check and or submit again without messing up the certificate if it has been issued.

Shouldn't pose any problem at all. tQSL ignores the signal report.

513. busted calls

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-02 17:33:57 UTC
From: Dave Bernstein
Topic: 513 Message: 513

I checked the FAQ, but found no answer to the following questions:

I log a 160m CW QSO with P5/4L4FT (pretend he came back to my CQ), and upload this QSO to LoTW. Later, I receive a hardcopy QSL from P5/4L4FN for the matching date, time, and frequency; clearly I miscopied Ed's call through the QRN. After correcting my log, can I simply re-upload the corrected QSO to LoTW, or is some other action required?

If instead of Ed sending me a hardcopy QSL, he uploads his log to LoTW, our two QSOs don't match. Is there a way for me to query unmatched QSOs with AA6YQ submitted by other stations, or is my only recourse to send email to Ed asking why he hasn't QSL'd after a some period of time?

You just have to upload a QSO with the corrected info, nothing else.

>If instead of Ed sending me a hardcopy QSL, he uploads his log to
>LoTW, our two QSOs don't match. Is there a way for me to query

No.

>or is my only recourse to send email to Ed asking why he hasn't QSL'd
>after a some period of time?

Yes, you're going to have to get in contact with Ed (or his manager) directly.

You can do a Find Call <https://www.arrl.org/lotwuser/act> to verify that
P5/4L4FN is enrolled in LoTW and the date when a log for that call was last
uploaded. But you can't do anymore specific of a query.

Thanks, Mike. As you can probably tell, I'm in the middle of
implementing LoTW-DXKeeper synchronization.

Based on your response, I will arrange for any change to CALL,
DATE/TIME, FREQ, or MODE (and in the case of satellite QSOs,
PROP_MODE or BAND_RX) in an uploaded but as-yet unconfirmed QSO to
trigger a re-upload. If the user changes one of these fields in an
already-confirmed QSO, they will get a warning; no re-upload will be
triggered.

Unrequited QSLs will be dealt with by the same process now used with
hardcopy QSLs -- an aging report.

Bob,

I don't think you're missing anything. The URL specifies a page on the secure website. You can't access the page without being logged onto the secure server.

If you're not already logged onto the secure server, you're first redirected to the login page. Once logged in you're taken to the specified destination, rather than the default home page.

What do I do now?
I loaded my signed log into TQSL and it soon began giving me a lot of "invalid band" error messages
and some invalid modes. It kept on loading until completion, I think. It did not give me completion message or the number of contacts loaded. The invalid band messages were caused by my log having
the frequency as "3" (instead 3.5 I guess).
What happened to the invalid contacts? I can't read the TQSL file to correct them.
Do I have to correct them and resubmit them? If so, how?
I can not find any info on this problem.
Thanks
Bill W5EC

I checked LoTW and it does not show any uploads from you so they have
not been submitted. Either edit your log and change the 3 to 3.5 or make
a new ADI file and do a Find for the 3 and then replace them with 3.5
and then sign them all again and see where you stand. You can do this
for any errors that may occur until you get it correct and then upload
the file.

Usually errors in the signing process indicate a error in line number.
You can open the file your are attempting to 'Sign' with NOTEPAD, and choose Edit, Goto Number and put in the indicated line number.

That way you can check to see what's wrong and use Search/Replace to correct instances.

And Remember to Check Preferences to Map Modes not already listed in LoTW to something LoTW accepts.

Ditto!

I have logs from four previous locations plus my current QTH I'd like to upload, plus I am trustee for two radio club calls which are very active in field day, contests, etc. That is really 7 different stations, and LoTW seems to mingle them all together in one stew.

73, Hans, K0HB

BTW: Seems to me that contesters are the major users of LoTW. Sweepstakes CW weekend is just 12-hours ended, and I already have several dozen hits on the log I uploaded last evening.

524. Ambiguous Dates

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-03 17:16:14 UTC
From: gbaron
Topic: 524 Message: 524

I am entering my older cards but I wonder if it is worth the trouble. The problem sis the problem of the ambiguous date.

In the USA it is USUALLY give MM/DD/YY BUT in the rest of the world ?? What part? it is USUALLY given DD/MM/YY

That is my assumption but it is not always true. Especially in SA and CA it of ten is the same as here and even in parts of the rest of the world. That means there will be a lot of QSOes that don't match, even though the card is in my hand and perfectly valid.

What are others doing? I suppose I could send to entries but that is just too much work and perhaps would be considered unethical? It would be great if LOTW could notify us of these by testing both and giving a tentative match. I suppose there could be cheating here but VERY unlikely!

The "invalid band" errors need to be fixed in the .adi file or your
log (see below). The invalid modes can be dealt with in TQSL.

Select

File -> Preferences -> ADIF Modes

Click on Add...

For "ADIF mode" enter the name of the "invalid" mode as it appears in
your .adi file. Then select the most similar "TQSL mode" from the
list and press OK

>It kept on loading until completion, I think.

Most likely. When the first error was reported, if you clicked "Yes"
in response to the "Ignore errors?" popup then TQSL will attempt to
process the entire input log.

> The invalid band messages were caused by my log having
> the frequency as "3" (instead 3.5 I guess).

TQSL recognizes a frequency between 3.5 and 4 inclusive
as 80M.

One way to fix this would be use a text editor to modify the .adi
file; search for <FREQ:1>3 and replace all of them with <FREQ:1>4
Alternatively you could also change the frequencies in the log and
then recreate the .adi file.

> Do I have to correct them and resubmit them? If so, how?

You must make the necessary changes to either the original log or to
the .adi file; run the corrected .adi file through TQSL again; and
finially send the resulting '.tq8' file to LoTW via email or the
website to submit them.

> I can not find any info on this problem.

Error reporting is not one of TQSL's strong points (That's kinda
like saying the sun has been experiencing a few minor hiccups these
past couple of weeks)

My logs are computerized back to 1977, and I submitted them all.

But the earliest QSL I have received on LoTW is a 1988 contact with Botswana. Then the "next earliest" is 1993 (2 matches), then 1995 (where they start to come pretty thick).

Of my almost 25,000 QSO's on LoTW, about 11,000 are before 1995. I'm sure glad I didn't enter them all by hand.

As of this morning I have 1,090 matches, 3 before 1/1/1995 and 1,087 after.

Well, this is one I wouldn't loose very much sleep over.

An invalid date error is generated during signing for any contact having a "date" in which the month is greater than 12. Thus, in most cases the transposition of month and day results in an error message and not a valid QSO record.

Presumably if someone were to systematically make this sort of error in transcribing their old paper logs they would eventually encounter enough problems during signing to alert them to the underlying error. And, presumably, they would then fix their problem.

Transposition would look valid for any date <= 12 so there are MANY problems here. The other problem is time, many people did not use UTC in the past. OTOH it probably does not matter as most of these are so old that they don't matter much any more.

529. LOTW Bandwidth of server

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-03 21:32:36 UTC
From: gbaron
Topic: 529 Message: 529

I have yet to get quick response on the LOTW serve except in the wee hours.
They sure could use more bandwidth as it is only going to get worse.
I have been waiting 15 minutes just to get the sign on screen and no
response.
A 5 second response would be bothersome but reasonable.

Gil,
usually I just have to wait for a couple of seconds, it seems pretty
fast to me...

I get practically instantaneous response.
Occasionally, and I do mean just once in a while, there is a few second
delay.

Gil, I've noticed that occasionally the ARRL server has a conniption and everything runs very slowly for a while, but right now -- I just checked -- it took 13 seconds to get to the LotW site from the main ARRL page, 4 seconds to get to the sign-in screen, and entry to the LotW user page after that was too quick to measure. It may be that the bottleneck is somewhere else on the way to you,

Enter the date the way you logged it ... the DX logs it the way they logged it ... and in the end, it'll match. No problem. Seems like a waste of time anyway to reconfirm QSLed QSO's anyway.

LoTW is supposed to confirm those QSO's you don't have QSL's for. Looks like I've got at least 2 unconfirmed countries on LoTW that I never bothered getting a QSL for. Looking forward to the day when my DXCC records are merged with LoTW, and don't have to go through the hassle of messing with QSL cards. It might even get me back into DXing seriously again since I won't need "wallpaper" to prove a QSO.

You have an ISP problem. It has never taken me more than 3-5 seconds to get to logon and maybe another 5 seconds after that. This is with 31,468 Q's in the database and 3,067 QSL's. Even random queries seldom run more than 10 seconds. The longest execution time is when I took an ADIF output of all 3,000 Q's with QSO detail. This is consistent whether on the DSL at the office, the T1 at the St. Louis home, or the wireless ISP in NM.

Get a real ISP.

I have to agree with Mike. I have a 56 k dialup connection (with maximum connection speed always at 49.2 k), and the loading/sign-in speeds are the same, no problems at all. Even when I'm playing with the 4 accounts things don't get as slow as you experience.

Those 15 minutes of waiting occured today, I assume. I noticed the whole ARRL site was down for quite some time on Saturday. Time to look for some alternative ISPs, maybe?

Scott,
Not sure what Pete is doing, but I download the ADIF file,
then import it to my regular logging program where my
DXCC,et al, records are stored.
It really works great that way.

Suppose the other station does not have my QSL, suppose I never sent it? The idea is not only to benefit yourself but EVERYONE should send EVERY contact to LotW. If they do not there will not be enough matches to make it work. Besides, this also applies to logged QSOes that are kept in a time format that does not match the other side.

It may not be the server. Shortly after the post it was working again. It is fairly often that the wait is longer than it should be. It does seem however, that once logged in the response is fast and they are VERY FAST at processing the uploaded data. I was very happy with that, seemed nearly instantaneous.

It is not my ISP. I am on Charter Broadband and all else is fine. LotW is fine now too. I have no idea what it was or what it has been. I agree this can happen and it is not always the server.
My speed is regularly about 2 Mbps.

At 04:17 PM 11/3/03, rojomn wrote:

>Transposition would look valid for any date <= 12 so there are MANY
>problems here.

If someone were to consistently transpose their dates, 40% of their Q's
would appear to be okay but 60% of their log entries end up being rejected
due to invalid dates.

Wouldn't you expect seeing 60% of a log marked invalid to raise some sort
of red flag for most people? I'd expect most would quickly sense that
something was not as it should be and begin to ask questions and investigate.

>The other problem is time, many people did not use UTC in the past.

Even if they'd been using sundials to keep time is not a valid reason for
them (or the software they use) not to convert their log times into UTC now.

That's a big part of the rationale for requiring ADIF or Cabrillo files as
input, those files have standard date and time formats specified.

Even if someone were to insist on ignoring the standards and
exporting local times and dates rather than UTC, the process is to some
degree self-correcting: the combination of 0 matches with a flood of emails
asking "why not in the log" should be a clue to such people that
something's wrong.

Subject: [ARRL-LOTW] LotW DXCC/WAS/WAZ

A week since my last check, and I'm up to 72 DXCC entities confirmed, 48

states for WAS, and 28 zones -- about a 50 percent improvement in DXCC
and
WAZ totals just since October 28!

At the rate it's going, I'll have DXCC/LOTW within about 2 weeks. Now THAT is above my attention threshold. I've already got a number of new band-countries (my 5B total is around 1250) which suggests that it's not just the ordinary stations that are submitting their logs. ARRL will already check LOTW for additions to any card submission you make -- after less than 2 months, aren't you getting a little impatient?

My first DXCC is dated July 28, 1968, signed by George Hart, W1NJM. We don't need LoTW to handle mundane clerical tasks like counting DXCC clicks.

Show me some good stuff, like a map showing a propagation summary (gleaned from LoTW contact records) on 40 meters/by hour during the 2002 ARRL Phone Sweepstakes, or a visual representation of how the bands recovered after the solar flare last weekend.

So? Did you read on down about new band-countries in the rarified area above 250? My first paper DXCC was signed by the same guy, though a few years later (I was overseas from 1964 till 1974).

>Show me some good stuff, like a map showing a propagation summary (gleaned
>from LoTW contact records) on 40 meters/by hour during the 2002 ARRL Phone
>Sweepstakes, or a visual representation of how the bands recovered after
>the solar flare last weekend.

If you want those things, then you should go to the log checkers, because they are the ones who have a complete database within a few months after the contest. Tree published an hour-by-hour, band-by-band table of the number of contacts made during the 2002 CW SS; the log checkers can do *much* more refined analysis than that, given time and interest. For example, I'd like to see similar stats by the section of the station on one or the other end of the QSO.

But back to LotW -- it would be nice to know what the ARRL vision for its future is, but I can state my personal expectation:

* Logging software will be revised to keep track of paper and LotW QSLs separately, and eventually to do submissions automatically as award thresholds are reached.

* ARRL awards will fully integrate LotW data, reducing the cost of getting ARRL awards for everyone.

* Contesters and DXpeditions will be able to reduce their costs (acknowledging that there are sponsorship issues that will need to be worked out). At a minimum, the "run-of-the-mill" Caribbean and Pacific DXpeditions will benefit immensely.

* Other contest sponsors will come on board, so that one database can serve ARRL, CQ, RSGB, DARC, JARL, etc. etc. There's certainly no reason to duplicate.

Will this be a transformation like the advent of SSB? Of course not. Will it make things better? You bet.

I repeat, it's only been operational for 2 months. Patience.

Hmmmm, well sorry to see that you are bored with the system, but your expectations are not what this system is designed to do. It is an on-line logbook to make chasing for awards faster and less expensive. Maybe your first DXCC was decades ago, but there are plenty of hams still chasing theirs and always new hams that will start chasing DX, states, grid squares, counties, islands, etc. for their award. We obviously need LOTW to handle "mundane" tasks since the current manual mundane process takes months. I could care less about a propagation summary. I don't care what happened with propagation in the past, I only care about upcoming predictions. What happened in the past is the past. It does not help you make more contacts in the future. If you don't want to use LOTW for its intended purpose, that's your choice. But don't complain because LOTW is not doing something it was never intended to do.

That's one version of the story, and the easiest to visualize. Some significant fraction of the users will be satisfied with just that and nothing more. Fair enough.

But let's not stop there and say "mission accomplished". Hopefully ARRL has a larger vision of "what this system is designed to do", and hopefully that vision includes scientific applications using that wondrous data base which are more than just clerical tasks.

As an example, last weekend several thousand North American amateurs were continuously working each other all across the HF bands in the SweepStakes contest. In the middle of it all, we were creamed with a solar flare. I can imagine a visual presentation of the cumulative data which would show the effects of the flare, maybe in 3D graphics with frequency on one axis, number of contacts on another axis, and distance on the third --- then roll it as series of snapshots 1 minute apart and see the effects as it hit and how the ionosphere recovered over time. Thats just one quick scenario off the top of my head. It wouldn't take me long to come up with a dozen other "kewl things" to do with this information.

Hey, let's do more than just another version of eQSL.

I'm with Hans on this one.
I'm grateful for the qsling option. Makes it cheaper to get those 'not rare, but expensive to accumulate band/modes.

But I'm a report/data junky, give me options to look at my qsl's/qso's, see where and whom I should watch for in contests etc.

Wonder if manufacturers could get ideas from seeing operating trends?
Don't know what kind of gold is in that qsl mine...till you dig...

Trying to use LotW for purposes like this reminds me of the old adage "When all you have is a hammer, every problem tends to look like a nail." LotW is not the tool of choice. If you want data, get after contest sponsors to provide it, or the finished reports you want. LotW isn't going to have inclusive-enough data for years (if ever) on QSOs made during, for example, a 2-day period at the beginning of November. The SS log checkers will have it in a month, with over 70 percent (their figure) verified through cross-checking the logs.

I know CQ is extremely proprietary about their raw data, but if someone wanted to volunteer to provide them with software to crunch it, on the basis of a small/disguised sample, maybe they would see the public relations benefit. ARRL may be more likely to be receptive, but we won't know till we ask.

Not sure I agree. I've been looking at my LoTWREPORT.adi.
I find it interesting, but wondering how my trends will change as more data becomes available.
Right now 60% of my qsls are from Saturday Operations. only 10% from Sunday...why???
Contests? I operate contests on Sunday.
I also have far more qsl's for SSB than cw, even though I operate CW far more than SSB.

As for hammer and nail...if the data I have is only from LoTW...I guess I gotta go with the hammer...

Pete, you've just made my argument for me.

There are dozens of contest sponsors out there, but only one (well, maybe two) LoTW.

QSO's from EVERY contest are in LoTW, all in the same identical format. Also data from non-contest operation which is available nowhere else. If a scientist (or just a curious amateur) wanted to do any comprehensive propagation study, they'd have to deal with dozens of contest sponsors with different database formats, or a single database at LoTW.

gridsquare is an *output* field in the ADIF file being output. There's
no reason to add that parameter to your query. (I've just checked my
output without the "&gridsquare" and I'm seeing grids in the ADIF output.

You're welcome (anyone on the list is, actually) to try my query page -
<http://www.itm-inst.com/lotwquery.htm> - to play around with simple
queries. I haven't implemented the entire query set - QSL start/end
dates and times, DXCC entity selections haven't been done yet.

Feedback on the query page would be appreciated.

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-06 05:10:56 UTC
From: Dave Bernstein
Topic: 585 Message: 585

It would be helpful to provide a parameter that when present returns the number of records that would have been returned had the parameter not been present. This would make it possible to present users with a progress bar during the process of downloading the ADIF file; downloads can be quite lengthy when a lot of QSOs are returned, or when the internet link is running at low speed.

I realize that the header contains the desired recordcount, but its hard to reliably grab that on the fly given chunking etc.

586. how do I correct an error in a certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-06 12:46:21 UTC
From: FireBrick
Topic: 586 Message: 586

I goofed and transposed the CQ & ITU zones for a station I manage.
Consequently, someone who received a qsl for this station noticed the zone errors.

Can I fix this? How?

And just purely academic question, Can I withdraw a certificate.
For Example: Say I was to cease being a manager for a station who then took on a new manager.
Could I just let the certificate die of old age or is there a way to end it before it's expiry?

When your over 50: You quit trying to hold your stomach in, no matter who walks into the room.

There's nothing wrong with the certificate itself. I think all you need
to do is update the location entry in TQSL for that station and
resign/resubmit the QSO information.

Don't know about withdrawing a certificate ...

Many have done that. They have them in the WRONG order, since almost
everyone else has the order the reverse of LotW, this was BOND to happen.

The Station Location I do not think is part of the certificate. Go to TQSL
and File/Edit location. After you change the location , resign the log and
resend it, problems solved.

590. LoTW drops records

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-06 18:09:02 UTC
From: Bill Hawkins
Topic: 590 Message: 590

Hi Gang,
Starting on LoTW's page 81 of my log submission. LoTW dropped huge chunks of my contacts. It doesn't seem to be any reason as they appear to be in proper form and it reported no errors.
The chunks are as few as one record and as many as an entire month and are scattered through the last part of the log. It totals about 1/3 of my log.
My question is can I go back and resubmit starting with page 80 without any repercussions from LoTW
for reporting the duplicates?
Thanks
Bill

Yes, you can just upload over top of what is already there.

And I'd email it in instead of uploading it on the web site. There have
been problems processing large files in the past that were uploaded. In
fact, I'd just send the whole thing over again to be sure.

How did you know that records were dropped. I hope you did not have to scan by hand. This is bad news if it is common because it will up the t traffic. One easy way to test fro this is to submit another time and if all are reported as duplicate then you know it did not drop any. This is not what should be done but is one practical way if you have a lot of records, let the computer do it. I assume though that there is a better way!

I have just resubmitted the entire log.
The way I knew some were missing was LoTW reported the number or records and it was way below the number I sent.
Yes, I had to scan by "hand" as I don't know a better way.
My original log is in Excel, so I copied the Date, time and call to a new page and began pasteing
LoTW 25 record pages side beside onto Excel. They matched up to page LoTW page 81. There the omissions began.
UH OH
Just got response from LoTW. All records were duplicates.
I will advise y'all when I see what is happening.
Bill

Do you know that they are making it into the .TQ5 file OK?
Maybe they are being dropped by TQSL, not by the LOTW server.

Maybe you can split the log into multiple TQ5s. TQSL lets you ignore
QSOs outside of a certain date range.

Did date range did you specify for your certificate? Maybe it is
ignoring the later QSLs because they are after your certificate is valid
for.

As I keep the LoTW Icons on my desktop, they look a little bland and not self-descriptive.

I have one for the LoTW home page, 1 for the Login Page (saves one step) and 1 each for the certificate and for signing logs.

Anybody good at icon graphics come up with something a little more distinctive?

Before you brag about your family tree, better do some pruning!

It is dropping the records because it doesn't like what I used for some of the fields.
I used PSK--what should it be? PSK31? RTTY? DIGI?
I used freq = 10 and changed it to 10.1--worked
I used freq = 18 and changed it to 18.1--worked
I used freq = 24 and changed it to 24.8--DIDN'T WORK- what should it be?

Where are the rules for this stuff? I can't find them.
Thanks
Bill

Bill

When you go to the "Your QSOs" window and open the drop-down menu for the modes you can see what the program uses.

Try 24.9 for 12 m.

It is dropping the records because it doesn't like what I used for some of the fields.

Hi Julio:
You don't have to go thru all these gyrations to get grid square info in your ADIF file.

Log onto Lotw, go to "Your QSO'S", select "Download report" and check "Include QSO Details".

I've been doing this since LoTW added the report function and they all have had gridsquare info included in the ADIF file.

I then import the ADIF into LOGIC 6 and can look at my grid totals by band. Also DXCC, States, Counties, Zones, PFX, etc.

I wish I had seen your post sooner and saved you some trouble.

601. ADIF download defect

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-07 01:00:00 UTC
From: Dave Bernstein
Topic: 601 Message: 601

I am downloading QSOs with the following Query:

&qso_query=1&qso_qsl=no&qso_withown=yes&qso_qsorxsince=2003-11-05
04:52:17

The header in the returned data is

ARRL Logbook of the World Status Report
Generated at 2003-11-07 00:53:20
for aa6yq
Query:
QSORX SINCE: 2003-11-05 04:52:17

<PROGRAMID:4>LoTW
<APP_LoTW_LASTQSORX:19>2003-11-05 04:52:17

<APP_LoTW_NUMREC:1>3

<eoh>

Notice that APP_LoTW_LASTQSORX is identical to the date and time
specified in the query's qso_qsorxsince parameter, and yet 3 QSOs are
returned. Shouldn't 0 QSOs be returned in this case?

73,

Dave, AA6YQ

PSK31

>I used freq = 24 and changed it to 24.8--DIDN'T WORK- what should it be?

It looking from something between 24.890 and 24.990 inclusive...
try 24.9

>Where are the rules for this stuff? I can't find them.

It's not well documented at all. However most of these rules can be found in

.../Application Data/TrustedQSL/config.xml

Under Win 2K & XP .../Application Data/ can be found by looking in
C:\Documents and Settings\<user name>\Application Data

Under Win98 look for it in C:\Windows\Profiles\<user>\Application Data\

...\Application Data is typically hidden so you'll need to show hidden
files in the file manager in order to see it.

PSK31. You can set up mode mappings in the menus though so that
TQSL will translate it to PSK31.

BTW, TQSL doesn't silently drop QSOs with invalid modes - it lists them
in the main window and will stop and ask you after the first one.

> I used freq = 10 and changed it to 10.1--worked
> I used freq = 18 and changed it to 18.1--worked
> I used freq = 24 and changed it to 24.8--DIDN'T WORK- what should it be?

If you're not going to report exact frequencies you might be better off
using the BAND field in the ADIF format rather than frequency.

604. Early experience with synchronizing LotW and a logging application

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-07 08:41:45 UTC
From: Dave Bernstein
Topic: 604 Message: 604

I have extended DXKeeper to independently track QSL status for hardcopy, eQSL.cc, and LotW; 3 sets of 4 fields are maintained for each QSO: QSL_Sent, QSL_Rcvd, QSL_Sent_Date, and QSL_Rcvd_Date.

I have implemented automated downloading of QSOs and QSLs from LoTW via the ADIF reporting mechanism; this mechanism has in general performed well; kudos to its designers.

I had previously uploaded 15776 QSOs to LotW, using the traditional export-ADIF-and-sign-with-QSLCert approach. Validating these by downloading LotW QSOs resulted in 15776 QSOs with LotW QSL_Sent set to 'Y' - every QSO matched. This process is rather slow , given the need to query the database for each QSO, but future invocations of this function will likely encounter a few tens of QSOs rather than 15K at once.

The 15776 uploaded QSOs produced 207 downloaded QSLs. The downloading code checks logged data (e.g. CQ zone) against LotW data and lets the operator decide how to deal with inconsistencies. It quickly became clear that the downloaded data must be carefully inspected -- e.g. ensuring that gridsquares are valid, and that IOTA tags are properly constructed. In some cases, the data can be reformatted on the fly, as in AS004 -> AS-004. Of the 207 downloaded QSOs, there were

- 26 IOTA tags that required hyphen insertion

- 4 bad CQ zones

- 2 bad grid squares

- 1 bad ITU zone

Thus the uncorrectable error rate was around 3%.

Before releasing this version of DXKeeper, I want to add a report that shows DXCC status separately for each of the three modes of QSL conveyance, as well as execute a few more tests. DXKeeper is free, so anyone interested in synchronizing their ADIF log with LotW will be able to do so.

Alas, the 207 LotW QSLs did not improve my DXCC Challenge statistics...

73,

Dave, AA6YQ

OK, OK, so it wasn't LoTW dropping the records. I guess I will now blame it on TQSL. I thought it only gave me one error on the first submission but on the second submission it gave a bunch of them. So I corrected all of them before submitting again . This time it went smooooth.
Well, maybe it really was my fault.

619. Bad upload

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-09 19:22:45 UTC
From: K0HB & K0CKB
Topic: 619 Message: 619

I'm a participant in both LoTW and eQSL.

Last weekend K0CKB and I ran SSCW Sweepstakes from a club station, K0RT.

After the contest I uploaded the 800-QSO log to both LoTW and eQSL.
Inadvertently, I uploaded the log from my K0HB identity.

In the case of LoTW I got no QSL credits, because LoTW matches both logs
against each other and of course no-one had worked K0HB in the contest.

From eQSL I got 8 QSL's (which I really didn't deserve because those folks
didn't work K0HB). Seven other folks responded from eQSL that they
couldn't find K0HB in their log. So it appears that right around half the
stations actually cross-checked their logs manually before responding, but
it appears that a person could randomly upload bogus QSO's to eQSL and
eventually qualify for one of their awards.

Can eQSL upgrade their system to issue credits ONLY for matched QSO's?

73, de Hans, K0HB

Yes, you are correct. That is the biggest error with eqsl. I never bother to cross check, just too damned much work. if they can't bother to implement matching then who cares?
I would bet it would be easy to cheat the way you stated and I don't care about that either, the cheater knows they are a worthless piece of trash so why should I care.
Now you may say I am cheating I don't cross check and just confirm? It may have been a cheat or may have been a simple error but if real matching is not done we will never know. I feel that the VAST majority of unmatched QSOes that need confirmation are actual QSOes that I just never logged, lost log, or simple mistakes. Most of them are for things in the distant past that I can't confirm but I still think they happened so I accept them.

Topic: 621 Message: 621

Thanks, Tim. That was quite easy. The entries have been deleted from my log.

To everyone at eQSL, my apologies. Even though I've been accused of sloppiness and worse, it was an inadvertent error and I am embarrassed that some small number of you have a bogus entry in your QSL file because you "took my word for it".

Really? That's not quite right.
So far, I've uploaded the logs for the W1AW/1 DCC event and for IARU W1AW/3.
My total log database will take some time to recompile since it contains ALL the QSOs made since late 1990. This includes all IARU events, too. And, it's in MS Access format. So I have to convert it over.

Hi Joe,

Well, this is interesting. I have uploaded a contact with W1AW/3 from July, 1996 and show no QSL match. Did you not upload the qsos that had already been confirmed with a QSL card? I do have a card and the info matches what I uploaded.

625. problem with syntax again

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-10 22:58:24 UTC
From: FireBrick
Topic: 625 Message: 625

I'm trying to create a URl to use as a Desktop shortcut to autmagically log me in, and take me to the Your QSO'S page

This url will log me in get me to the page where I can choose My Qso's
https://www.arrl.org/lotwuser/default?login=mylogin&password=mypassword

but I'm stumped on how to then have it select the link to take me to the Your QSO's page where I can select which callsign to search on and whether to return "My Recent QSL's" or "My Recent QSO's".

https://www.arrl.org/lotwuser/qsos
I think I have to then make it execute the above URL but not sure how to do that.

Keep using my name in vain, I'll make rush hour longer. -God

It doesn't look like the QSOs query will take login/password
parameters. If you don't already have a logged-in session, it will
prompt you for login and password even if the login and password are
included.

If you use two shortcuts - one to log you in, then a second to bring up
the QSOs query - that'll work.

After visiting eQSL's site and LOTW's site. One feature that would be nice if the LOTW site would indicate (in the QSO listings) if the stations had uploaded their logs. Some type of Highlight or marker. This way people can work out an logging problems.

631. ADIF download report: useability enhancement

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-14 06:09:55 UTC
From: Dave Bernstein
Topic: 631 Message: 631

In response to a query whose username and/or password are invalid, the response should be an ADIF file containing a header bearing an APP_LOTW_ERROR_MESSAGE tag followed by no QSO/QSL data. At present, a page of HTML is returned, making it unnecessarily difficult for client applications to properly inform the user.

634. ADIF download security defect

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-16 04:10:08 UTC
From: Dave Bernstein
Topic: 634 Message: 634

While testing a new version of DXKeeper that automatically synchronizes by downloading QSOs and QSLs from LotW, I discovered that after successfully downloading a a file, subsequent downloads made with an incorrect username and/or password succeeded; I double-checked the query supplied to the file transfer control to be certain. A day later, my attempt to synchronize my own log failed with a "no data returned" error. I'd forgotten to replace the bogus username and password used in the earlier testing with the correct values. After doing so, attempts to download continued to fail with no data returned. I tried an hour later, and could successfully obtain my latest QSLs.

Sounds like the username and password is being inappropriately cached somewhere. This will be frustrating for users who enter an incorrect username and password, attempt a download, correct their mistake, and then still cannot download.

Hello All
Since LoTW started I have been typing my paper logs into the computer.
Well after several hours of typing I screwed up my log and all data is lost.
I have already uploaded all this data to the LoTW.

Is there a way to download my whole log from LoTW?

Or is there away to change the TQ8 files back into ADIF format.

Thanks

I FOUND MY OWN ANSWER HIHI.
When I upgraded to my new version Logging program I did not follow the instructions. So in the process I trashed my log file.
As I was playing with the new version I noticed it has a LoTW menu.
Opened the menu and there is a utility that will let me download all my records or just the confirmed if I choose.
So Log found and replaced. I sure did not want to retype all those records.
Also learned a lesson make a back up ADIF file.
This is the reason I have always kept my logs on paper just dont trust a computer. HIHI
Thanks

Hello all

We are interested in listing a set of links on the LoTW website, to the webpages of any logging software that has incorporated any part of LoTW beyond the simple creation of ADIF/Cabrillo files.

We are aware that DXLab software, Writelog, and N3FJP's Amateur Contact Log all have extra support for LoTW. Perhaps MacLogger, by Dogpark software has also.

If anyone knows of others please let me know, and if there is further information about these and others, also please let me know.

> Or is there away to change the TQ8 files back into ADIF format.

Sort of. If you have WinZip.

With Windows File Explorer, rename filename.TQ8 to filename.adi.gz (Yes, there are two dots in the file name).

Double click the new .gz file and WinZip will propose to extract it to filename.adi. Say yes.

Now your filename.adi is pretty close to an ADI file. Maybe the TrustedQSL ADI reader will even read it? Other ADI readers probably won't. For starters, it needs a line with <EOH> somewhere before the QSOs start in the file. Then it needs <TIME_ON> instead of <QSO_TIME>.

From: obrienaj
Topic: 644 Message: 644

Ok, what am I doing wrong ? I received a new certificate from the ARRL via email. I saved the attachment (K3UK2.tq6) to my hard drive in my desktop folder. I then loaded TQSLCERT and clicked on the load certificate option. I select the path for the k3uk2.tq6 file , currently in my dekstop folder and then get this error

system error :c:\Documents and Settings\andy\application data/TrustedQSL/keys/K3UK :no such file or directory

I also tried simply downloaded my certificates from the LOTW web site but I get the same error when i then try to load the new certificate.

I have tried this on both of my networked computers and get the same error.

Seems that TQSL is looking for something but can't find it.

From: Tom Horton
Topic: 645 Message: 645

Ok,
I think I know the answer.
Eventually, I want to computerize my "old" logs from
several different QTHs.
I can go in and just add a new location since it will
still be the same call, right ?
Has anyone had any luck getting confirmations back from
Qs made back in the 60s, 70s and 80s...ok... 50s too.

My log only goes back to 1987 but I have quite a few from the late
80's

Tom,

I've gotten one as far back as 1983 (for a JA station).
BTW - thanks for handling all the cards!

From: Bill Hawkins
Topic: 648 Message: 648

I am trying to transfer LoTW from my old computer to the new one, but my certificate won't transfer.
The folder "tQSL Certificates" copies but the folder "ARRL" and the certificate for W5EC does not copy.
How can I get my certificate over there?
I am using a USB pen drive as the transfer medium.
Bill W5EC

Hi Bill,
Not too sure if you can do this.
I had to reformat my hard drive and couldn't get things
going again. Had to talk to the folks in Newington, and they
gave me a new certificate. But, I may be totally wrong.

Bill,

ON your old machine: from tQSLCert ...

1) Highlight your certificate
2) Right click (or select Certificate in the menu bar)
3) Select "Save"
4) Navigate to your USB pen drive and save there.
5) You will need to go through the passwords, etc.

On your new machine ...

1) Open tQSLCert (assuming it's installed)
2) Select "File" on the menu bar
3) Select "Load Certificate File"
4) Select PKCS#12(.p12) and click on "Next>"
5) Navigate to your USB pen drive
6) Select the file you saved above
7) click on "open"
8) go through the password routine

Certificate will be loaded

73,

... Joe, K4IK

I think this will work ---
Export your certificate using TQSLcert (Select the callsign, then use
the Certificate/Save menu. Write the .p12 file to your USB drive.
On the target machine, use File/Load Certificate File to load the
exported certificate file.

Thanks to Rick & Joe who showed me how to get the certificate transferred.
But now that it is transferred, if I try to sign an existing adi log it
says--error:configuration file error. Everything looks ok but I don't know
what the config file error is. Any way to find out?

On my XP system, TrustedQSL has a directory in
c:\Documents and Settings\<username>\Application Data\TrustedQSL
(where "username" is my login name on the system.) Depending on your
OS, that may be there or somewhere else.)
That directory has a "config.xml" file, a "station_data" file, and a
couple of interesting-looking directories - especially the "certs" one.
Maybe moving this directory to your new system will work for you.

654. New computer

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-26 02:06:13 UTC
From: K0HB
Topic: 654 Message: 654

I am in the process of upgrading my shack/officer computer from a WIN-98 machine to a new WIN-XP machine.

Is there a document which describes where the current important public/private key files reside, what their extensions are, and where they should be placed in the new computer. Are there any system registry issues which need to be dealt with? Are there any other "gotchas" lurking?

If this information is not currently documented, could you publish a short set of instructions?

Thanks

73, Hans, K0HB

Hans,

The only issue ...

1) Save your current certificate(s) on the old machine by
doing the Certificate -> Save process in tQSLCert.

2) Copy the resulting .P12 files to a floppy/CD/etc.

3) Install tQSL from scratch on the new machine.

4) Load the .P12 files (created above) on the new
machine (tQSLCERT -> File -> Load)

I'm running tQSL on two different machines interchangeably
with no problems after that process ... after having made
all the errors possible and losing my original certificate
... during the start-up phase.

Good luck with the new toy <G>.

73,

... Joe, K4IK

To put it on your new machine is simplicity itself. You only have to save the certificate. Go TO TQSL Certificate/Save. You can then load that on the new machine after you do a normal install. Move your ADI files that you want to keep too. Do not try to move directories and registry entries and such, you are just setting yourself up for a fall if you do it that way.

The multi QTH / Multi Call feature works very well. I inputted my previous call (WD0CQA) from North Dakota, My KL7/WD0CQA from when I moved home, and both of my Alaska QTH's (North Pole & Anchorage). It went very smmothly. The oldest QSL I have received so far is January 9, 1978!

LotW is neat for ARRL awards BUT how do I use these cards for others. For instance, how do I provide ,if asked, my log to the CQ County Award program. Is there a way I can prove to them that I have certain cards or do they have to join some organization and pay some money to ARRL and how soon will this happen. Again, the log is nice but useless for many things and in fact currently useless for anything since no award provisions are yet available.

What all this means is that I may still have to get paper QSL cards if I can't prove what I have to others.

I believe ARRL has stated that it intends to work with other award sponsors
so that LotW confirmations can be used for those too.

I am glad they will work with them but I certainly would like to see details soon. The earlier this is published the better LotW will be. It will be a huge incentive to people to upload logs when they see what can really be done. Do not get me wrong, this is a huge step forward in logging IF it is used correctly and soon.

Nevertheless, I intend to send everything I log and to send it often. I only hope all do the same!
Programs like DXLABS suite make this easy too, and easy to keep in sync.

There is a short quip in the December CQ that says they are working with
ARRL on establishing their awards to work with LoTW. It all takes a bit
of time but it is happening and things are moving forward.

How soon is soon enough? It's only been 3 months since the operational
roll-out, and if I were a non-ARRL award sponsor I would have waited to see
how it went before getting into serious discussions.

According to the web site this morning:

24,499,174 QSO records have been entered into the system.
468,846 QSL records have resulted.
4,638 Users are registered in the system
6,133 Certificates are active
18,151 User files have been processed

Not bad for 3 months and an entirely new concept. I am kind of intrigued
by the gap between registered users and active certificates. Maybe people
with more than one call, but wouldn't they we registered as users under
each one?

Nope, I have 3 cert and the only login (user) name.

I entered my entire log. 3 different callsigns and obviously 3 certificates.
I'm also entering the logs of the stations I manage.
So at present I have 4 cert. total.

I'm assuming I count as:
1 registered user
but
4 active certificate holder

BTW: Earliest qso date I've received a qsl for is 1971.
(Yes, I got my first license when I was 3) :-)))

You are depriving some poor village of its idiot.

Pete,

> I am kind of intrigued by the gap between registered users
> and active certificates. Maybe people with more than one
> call, but wouldn't they we registered as users under
> each one?

It is the "users with more than one call."

Due to LotW's design, a user is required a different certificate for each call (and each variant of that call). For example, I have certificates for WN8HWE, WB8HWE, AD8I, W8IK, W8IK/4, and K4IK. I would not have been able to upload old logs otherwise.

I expect that some QSL managers will eventually have a dozen or more certificates.

How does one go about claiming a QSL on LoTW?
I do know that you have to pay the ARRL for QSLs claimed, how is this done?
I looked on the LoTW site, and did not see anything to show how it is done.

Tnx,
Vince. K6BIR

Topic: 668 Message: 669

You only have to pay if you use the QSL for an award.
You could even prove to someone that you have the QSL and it could be for an award not sponsored by ARRL if you gave them your password and login but that would be dangerous.

I think what they need is a way to provide you with a list of your log that is digitally signed by ARRL to certify that it is correct. It would be proof that could not be altered for you to use to claim another award. This would be a very easy and cheap way to do it but I don't hold my breath.

670. New DXKeeper (DXLab) support for LotW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-11-28 03:27:51 UTC
From: Dave Bernstein
Topic: 634 Message: 670

DXKeeper is a full-function logging application for Windows; its a member of the free-ware DXLab Suite of interoperating applications. Since the beginning of LotW beta test, DXKeeper has prepared ADIF files for signing and encryption by TQSLCert.

Yesterday, I released DXKeeper 3.0.8, which

- independently tracks hardcopy QSL, eQSL.cc, and LotW status for each QSO

- with a single click, verifies that QSOs uploaded to LotW have been accepted and updates the logged QSOs accordingly

- with a single click, downloads all newly-arrived QSLs from LotW, updating each logged QSO to reflect both confirmation status and complementary information (DXCC entity, CQ zone, ITU zone, Iota tag, Gridsquare, State, Province)

- produces reports that show award progress by QSL kind (card, eQSL.cc, LotW)

Sample reports can be viewed in http://www.qsl.net/dxkeeper/DXKeeperQSLByKindReport.txt and http://www.qsl.net/dxkeeper/DXKeeperWASReport.txt

I am happy to say that LotW's ADIF Query mechanism was well above the bar in its ability to support synchronization with logging applications. There are a few deficiencies and defects, but no showstoppers. My fear that late introduction of this mechanism might expose defects whose resolution required architectural change were unfounded; kudos to the LotW team.

DXKeeper is available via www.qsl.net/dxlab .

Also, if you plan to send any QSL cards to the ARRL DXCC desk download
the new submittal form from their website. They have added a little box
near the upper left-hand corner of the page which instructs the DXCC
folks to check LoTW for any applicable contacts that you have in the
computer. This will save sending in the cards for entities that are also
confirmed on LoTW.

678. Mobile Operation

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-02 03:40:51 UTC
From: Bill Metzger
Topic: 431 Message: 678

Well, I'm confused and need your input. I operate both from home (fixed location) as KF0OH and mobile as KF0OH/M. As a mobile, I usually operate within 15 miles of my home QTH, but have driven from Missouri to Wyoming and back, passing through several States and making a number of mobile QSO's. From previous postings, I found that I needed to obtain another certificate for KF0OH/M, which I have done. I have not yet uploaded my log for mobile operations since I'm not exactly sure how to do this. First, If I upload my log and "sign it" with KF0OH/M, what happens if another station enters it into their log without the "M". Assumably, that QSO will not find a match under KF0OH, (per ARRL note below). It also seems, that once I get resolution of the mobile operation, then I need to separate my log into the various locations I've operated from and "sign" each with the KF0OH/M certificate but using different locations.

While it doesn't matter much for DXCC, it will for WAS. What brought this to light for me was a recently received QSL card from a station that I worked while mobile, outside of Missouri. The card is from a US station and notes a QSO with KF0OH. The /M was not included on the card.

Any help? Thanks in advance. Bill

++++++++++++++++++++++++++++++

The following section comes from the LOTW website and quite honestly, is still somewhat confusing.

I used the same call from several different locations in the same DXCC entity -- I didn't sign portable. Do I need a separate certificate for each location?

No. In TQSL you can create as many different station locations (the QTH from where you operated) as you need. You will need to consolidate those QSOs from each different location, however. Once you have parsed your log correctly, you then sign those log extracts with your primary certificate, but make sure you select the correct station location for that particular log extract. Be sure to give each station location a different name.

If you signed with a portable, such as NT1N/6, or NT1N/R, you should obtain a separate certificate for those calls. Remember, those stations who worked you as NT1N/6 will not get a match to their data if you sign your NT1N/6 log with your NT1N certificate -- each QSO you submit will be tagged with NT1N instead of the correct NT1N/6.

Had the same question when I was uploading my Florida QSO Party logs from this year ... operated from several different counties (signing NJ4M/xxx where xxx is the 3 letter abbreviation for each county.)

What I did, is sign and upload each county log (signing each log with the county operated from) as NJ4M ... and obtained additional certificates for each county as NJ4M/xxx.

This allows those who logged us as either NJ4M or NJ4M/xxx to get credit. Didn't send in any logs as NJ4M/M since that is NOT what I was signing. (If someone wants the QSL or questions the QSO, I'm willing to upload an individual QSO as NJ4M/M). I've had QSO's confirmed as both NJ4M and NJ4M/xxx, so both methods work.

There needs to be some "standard" LoTW way to log mobiles, so everyone knows how they should be logged and how the uploaded logs will be signed, so that proper credit can be given.

Exactly what I was looking for. This makes sense. I realized after reading your note and the LOTW FAQ that certificates can be signed with various locations. All of the home QTH contacts were uploaded without specifying any location (just USA). Now I'm wondering if I shouldn't have created a St. Louis location and selected that when I uploaded my entire log.

I'm sure that most users are unaware of this and wonder if it really makes any difference. The primary certificate location may just default to the FCC address of record.

Any thoughts on this?

Bill

681. Re: [ARRL-LOTW] Mobile Operation

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-02 04:45:52 UTC
From: Wayne Wright
Topic: 431 Message: 681

I have a rather different understanding of how to submit a log from a roving station based on correspondence some time back with KE3Z.

You only need to get additional certificates if you operated under different calls. I personally would NOT use the /M designator either on the air or in a LOTW submission, nor would I add the county in a QSO party, but that's my preference. For the system to work you must use the same call on the air and in the LOTW submit and your QSO partners must do the same (which is why I would not sign /M -- just use the same call everywhere).

The thing that must be different in your LOTW submission for each QSO location is the "Station Location". You need to create as many of those as QTH's that you operated from. (I am vague here because the LOTW allows you to be vague when you create a Station Location). If you want your QSLs to confirm STATE, or GRID SQUARE, or COUNTY, then you must create as many different Station Locations as you logged QSOs in. (And if you fill in ALL those, then you have to remember that GRID SQUARE boundaries cross STATE and COUNTY boundaries, so you would have to create separate Station Locations for each unique combination).

After you have created all the Station Locations, you have another chore--if you are using the Trusted QSL software to upload your log (and almost everyone is for now) then you must create a separate ADIF file for each Station Location, and that ADIF file must have only the QSOs in it that were made from that location.

Finally, you have to individually sign all those ADIF files you created and upload them.

All the manual labor involved in the above process is a big reason why WriteLog supports the TrustedQSL format. For a state QSO party, WL "knows" which QSO was logged in which county and eliminates both the manual steps above. It internally creates a separate Station Location for each county of operation (you can't see these internal ones in Trusted QSL), and it puts all of them in a single export file, individually signing each QSO with the right county.

One (major) caveat: WriteLog supports those rover operations only on a contest-by-contest basis and none of the available contest modules actually support rover logs for LOTW yet, but it should happen over time (but I can't promise any dates).

Had the same question when I was uploading my Florida QSO Party logs from this year ... operated from several different counties (signing NJ4M/xxx where xxx is the 3 letter abbreviation for each county.)

What I did, is sign and upload each county log (signing each log with the county operated from) as NJ4M ... and obtained additional certificates for each county as NJ4M/xxx.

This allows those who logged us as either NJ4M or NJ4M/xxx to get credit. Didn't send in any logs as NJ4M/M since that is NOT what I was signing. (If someone wants the QSL or questions the QSO, I'm willing to upload an individual QSO as NJ4M/M). I've had QSO's confirmed as both NJ4M and NJ4M/xxx, so both methods work.

There needs to be some "standard" LoTW way to log mobiles, so everyone knows how they should be logged and how the uploaded logs will be signed, so that proper credit can be given.

73, Ron WD4AHZ

Did you separate the contacts from the different calls and upload and sign each batch of QSO's with the appropriate certificate?

I have two certificates registered, for my current call of N5WC and my old call of N4ATP. When trying to retrieve information on the N4ATP it always says zero records found. I have uploaded my entire log several times without any change in results. Can anyone tell me what I am doing wrong? Thanks for your help. Wendell N5WC

In a QSO party, there is no other way to let other stations know you have changed counties unless you add some kind of designator to the call. (The pileups created when you change counties is amazing!)

> For the system to work you must use the same call on the air and
> in the LOTW submit and your QSO partners must do the same
> (which is why I would not sign /M -- just use the same call
> everywhere).

And that's the reason I submitted 2 sets of logs, because we don't know how the other guy is going to log it. If everyone logs what was sent, NJ4M/xxx, for example, then I'd only have to upload one log from each county. But looking over the 660 or so FQP logs, the majority logged mobiles as either NJ4M or NJ4M/xxx (with a few /M thrown in here and there). I feel if folks took the time to get on and work me, I can take the time to go through the process of obtaining additional certificates and signing a log from each county operated, to try and give as many folks whatever credit I can.

Of course, the easiest solution (but not necessarily the best) would be if LoTW could "wildcard" anything appended to the callsign, such as /M, /xxx, /QRP, /4, etc. (except for valid DX prefixes, such as DL/WD4AHZ). Then it wouldn't matter what each station logged ... as long as the rest of the QSO data matches.

Ron, WD4AHZ

Hi,
Sorry to jump in to the discussion.
I've been also worrying about this problem since I became LoTW user, as
my current operating style is 80% mobile.

Obviously one solution to the matching problem is simply uploading my
log as a duplicate, one signing as /M and the other without it. I'm not,
however, doing this because I don't think this is the best solution.

One of the problem comes from the fact that there are no formal regulations
whether we should sign portable/mobile and people tend to omit it,
especially on the receiving side. This applies to US and other countries,
including Japan. Some other countries, however, eg. UK, signing /M or /P
is mandatory (written in the license booklet), i.e. without signing it
could be illegal.

As LoTW may, in the future, become more global database, not only for US
and ARRL, I wish more sensible solution to this problem should come.

At the moment, I don't want to upload my logs in duplicates simply for
the purpose of matching.

I guess I don't buy the claim that the "easiest solution" is for the LOTW database to match stuff a certain way. It looks easier to me for everyone to log everyone else's call sign rather than stuff like /M and /County that are sent over the air to solicit QSOs, but definitely are not part of the callsign. (For my own part, I would not log WD4AHZ/XYZ as it is perfectly clear to me that your call is WD4AHZ and XYZ is the county you are in and not part of your callsign).

The argument about DXCC prefixes has lots of exceptions, and ifs, ands and buts, and that means trouble for users. Does KH6/W5XD match W5XD/KH6? What does /MM0 mean? Its not so easy to make LOTW this smart, and, once you've made it smart, you have uniformly inform all LOTW users of exactly how smart it is, else the cure is worse than the disease--folks will fail to understand why one thing matches and another doesn't. My experience is that one doesn't want to be working with a software system with thousands of users that don't quite understand what its doing--simple is way better if it gets the job done.

So if there is a measure for "easy", then I claim its easier to simply tell all LOTW users to log anbd submit only callsigns than it is to accomplish both (a) implement LOTW so it matches exactly the right things and (b) inform all LOTW users exactly what matches with what.

True. There needs to be some "standard" so everything matches - and it probably should have been figured out BEFORE folks started uploading logs. So until that happens, you have several choices ...

1) upload logs using just your call, and hope the stations logged you the same way (or that way eventually becomes the "standard").

2) upload multiple logs in order to match those that logged different ways (in order to match as many as you can now).

3) don't upload any logs until some "standard" is established (which may never happen).

I just opt for #2 right now and will do #3 (if needed) when the time comes.

Just for fun, I checked my LoTW records for my mobile operation. I have 22 QSO's confirmed as NJ4M and 41 confirmed as NJ4M/xxx from the various counties I operated in. This tells me I'm doing the right thing to match as many QSO's as possible ... and that's my goal. If you disagree, that's fine, since there appears to be no wrong or right (or better) way to do it at the moment.

I just delay releasing the contents of my log until it's too late for
anyone to make use of it. It's a habit I got into with eQSL and I see
no reason to change it.

As has been pointed out, it's probably less likely with LoTW, but in the case of eQSL I have already received confirmations for contest contacts that revealed that I had blown the callsign in my log. Had I not already submitted the log, I could have corrected the error before submitting my entry (I usually have my log submitted within 24 hours of the end of the contest, but there's no reason to expect that everyone does that).

Even if the contest entry is already submitted, it's usually possible to submit a corrected log any time before the contest entry deadline. The last log submitted is the one that is used.

As I said, the habit started with eQSL. I have a routine now, and no reason to change it for LoTW.

With LotW it is IMPOSSIBLE to do that. If the contact does not match, you cannot see it, period. There is no reason to delay and maybe forget. I hope most do not do that.
There is no reason to penalize LotW because of the bad behavior of eqsl.cc.

With LotW it is IMPOSSIBLE to do that. If the contact does not match, you
cannot see it, period. There is no reason to delay and maybe forget. I hope
most do not do that.
There is no reason to penalize LotW because of the bad behavior of eqsl.cc.

Which simply means you CAN confirm you're NOT in the log.

So what? I find I am not in the log and so I remove it from mine? The
scoring code will do that anyway. There is no penalty and no gain from
leaning this so as I say there is no reason to wait.

Where's the penalty? It only means my logs are in LoTW 4 to 6 weeks
after the contest, instead of the next day. They'll be there, and those
who need the confirmations will have them.

You wouldn't have a QSL card that quick, so what's your problem?

You may not understand the penalty system.

Here is the quote from the CQWW web site:

4. SCORE PENALTIES

For each -N or -B callsign, contact-point and multiplier credit is

denied. In addition, a point penalty of 3 times the

claimed-contact-point-value is assessed.

706. KX6PO uploaded to LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-04 22:20:03 UTC
From: FireBrick
Topic: 706 Message: 706

I've uploaded the entire log of KX6PO, June 9, 1983 through December 14,
1983, to LoTW.
We even have hits already.

Anyone having questions about a NIL, can contact me via email.
The original logs were hand written.
That's being very generous.
I spent many hours making sure I was reading them correctly but translation
errors may have inevitable.

All generalizations are false, including this one.

707. 160 Mtr Contest

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-06 15:30:56 UTC
From: Mike(W5UC) & Kathy(K5MWH) Watson
Topic: 707 Message: 707

Good Saturday Morning:

Hi Gang. Please upload your logs from the current ARRL 160 meter contest. This looks like a fun opportunity to get as close to 160 Mtr WAS as possible without mailing a buncha cards. A big deal? No, just something fun to do with LOTW and to stimulate activity there.

See you tonight on 160. (With my mighty 100 watts. HA HA YUK YUK)

708. "1 million QSLs" ???

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-06 19:12:32 UTC
From: geerja_be
Topic: 708 Message: 708

I was just looking at the latest ARRL Letter, reading the bit about the LoTW.

Among other things it says "This has resulted in more than 1 million QSL records."

Am I missing something here? Did I only get half the deal? My screen says there are a little over half a million QSLs. Or is my screen faulty?

73,

Gert - K5WW

Slightly aggressive marketing, I'd guess. 517k QSL records represents twice that many QSL's since each side of the QSO gets a "card".

N1MMLogger, which is freeware, supports RTTY through incorporating the
MMTTY software kernel, and PSK as well. Very neat stuff, and tremendous
support. Exports ADIF and Cabrillo for LotW compatibility. Go to
http://pages.cthome.net/n1mm/

Any modern contest logger with ADIF export support. N1MM (free) and
WriteLog (expensive) are the most known two.

From: rojomn
Topic: 713 Message: 726

I would get N1MM Logger from

http://pages.cthome.net/n1mm/

and you will be happy. It is free, it has the best support, it is in my opinion the best contest program you can find. It supports RTTY, PSK, and CW.

I used to use WRITELOG which is also good but expensive and not nearly the support that N1MM gets.
One of the neatest things is called Enter Sends Message. With this you can do a contest without using the Function key. It knows what to send next when you press enter AND it always makes clear what is next. If you used this in TRLOG in the past you probably got frustrated since you never knew what came next but with N1MM you do.

730. Station Locaiton, Howis it handled?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-09 23:47:55 UTC
From: gbaron
Topic: 730 Message: 730

Here is a situation. In my haste to send my logs I signed several files with the wrong station location. Is it possible in any way to correct this. It is important because some awards are not valid if you are at widely varying locations. For instance WAS would not be allowed if 25 were worked from Texas and 25 From Minnesota.

To make it even more complex, I have had 2 calls and each call has had varying locations.

If I resent all the contacts I assume the locations will be corrected IF IT IS THE SAME CALL but what if it is the same contact but I also had sent the wrong Operator Call as well as the wrong location?

Is there any way out?

I assume you can't wipe your log and start again. That would be unfair to people that were counting on it for an award. After all , once you mail a card, there is no way to take it back.

Interesting isn't it?

Hi Gil

No biggie. Just take the same logs and re-sign them with the correct station location (and certificate/call of course) and send them in. If the other station's call(s), time, date, band, and mode don't change the old data will simply be replaced with the 'new' data that has the proper geography attached.

If I resent all the contacts I assume the locations will be corrected IF IT
IS THE SAME CALL but what if it is the same contact but I also had sent the
wrong Operator Call as well as the wrong location?

I'm not exactly sure of what you ask here, but if you mean, for example, that you signed the data with your old call what can be done- the answer is, just sign the same data as I wrote above and it will go in correctly this time with the right callsign and geography attached. It won't replace the previous data because that was signed with a different certificate. The previous data does no harm because it cannot be matched. It will sit there harmlessly.

73, Dave, NN1N

732. Re: "1 million QSLs" ???

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-12 17:47:46 UTC
From: Beischel
Topic: 708 Message: 732

I think what is happening is the system is noting the number of QSL records - e.g. n1aa and w0aa send in their logs - one QSL record results in which 2 QSLs are generated. So the system is showing the number of records - not the number of QSLs which is twice the number of records.

I'm NOT computer savvy.
but
I uploaded my 3 callsign logs
I uploaded 2 logs of stations I manage.

LoTW is free.
There is a small charge for crediting a qsl to your dxcc or other award.

I THOUGHT to get a card from eQSL you did have to pay a larger fee.
And it was creditable only if the DX station authorized eQSL to serve as
their manager.
(the above may have changed since I read their rules).

So...if I could do it....a blind wino can.

so mileage does vary....

He he - OK congrats then!
I didn't know you were a blind wino, but I am no better, grin!

I now see it is free except for cerificate hunters so no problem
with the fees. eQSL.cc has been free. If I can ever get STARTED with LOTW I am
sur eit WILL be easy!

Seriously, I have not got to the stage of sending any logs because you have to
have your certificate acknowledged first and since they can't sem to accomplish
that so far after my two submissions, it is not me that has the limitation, but the
certificate system itself.

I am going to try again this weekend.

ONLY if you use it for awards and for that it would be worth the NOMINAL
charge.
I agree that your experience should NOT happen and for most it has not.

IS your FCC address of record correct?

No ppaer cards are availabel. Having your records in the log is free.

> And it was creditable only if the DX station authorized eQSL to serve as
> their manager.

IT has NOTHING to do with that. If they send up their log, it counts if you
match a QSO, period.

Paper Cards are available, and there is a mailing facility to have them
sent to you through the post, so presumably if the DX station authorises
eQSL to be their manager the cards would be valid for DXCC.

QSO's matches only count towards eQSL's own awards and then only if the
DX Station has "Authenticity Guaranteed" status

Brian,
Like K0HB said...make sure the address you put on th eapplication is the one
that is listed in the FCC data base. If you have moved at all, you might
just want to check.
Zip code changes do happen from time to time.
I sort for the W5 bureau, and I had a guy whose envelopes kept coming back.
He checked with the post office and they had changed the zip and he didn't
know it.
Gosh, just think of all the bills you wouldn't get! But oh, the late fees!

This has been answered many times in the ONLINE QSL group. They tried but
ARRL refused. Thos cards are not acceptable, even if they are a QSL manager
UNLESS the log was received directly from the station. ANYTHING that has
gone through the eqsl.cc path is totally unusable for an ARRL award program.
Basically ARRL said , sorry boys to eqsl.cc, you cannot be a manager.
Now that eqsl.cc does not do double blind matching even if they were to want
to accept them it will not happen as the security of the match at eqsl.cc is
not existent.

Thanks, I will check with the post office, but I think the chances
of this being the problem are somewhere in between "slim" and "none!"

YES.

We'll see what happens with this third attempt!

I like eQSL.cc for friendly relaxed, easy QSLing.

Maybe LOTW is better suited to the hard core contesters and
the paper chasers.

Brian,
To me LOTW is MUCH easier in the long run than e-qsl. Plus,
these confirmations will count for something.

From: Carl Smidt
Topic: 750 Message: 750

I think that it will be a long time before LoTW will replace the need to collect QSL cards. Having been an active participant since September 15 and having uploaded most of my recent QSO records, now in excess of 6,500, the QSL record stands at only 92, pretty dismal considering that I have over a thousand QSL cards in my files.

Carl,

It would appear the major use of LoTW right now is by Contest Stations.

This may change as time goes on but I think there needs to be an incentive for DXpeditions to put their on.

I, for one would be willing to pay a premium to encourage major DXpeditions to do this.

I'm pretty sure the group that invaded T32 enmass said they would be putting all qso's on LoTW.
Which would be nice for me as I got a couple new band/mode slots.

(but I also sent a donation to help with expenses)

I actually think it's cheaper for me to send a donation with no qsl card but have the qsl via LoTW.

As I have the countries, I don't need the cards, just band/mode credits.

your mileage may vary obviously.

Subject: [ARRL-LOTW] QSL Records

I think that it will be a long time before LoTW will replace the need to collect QSL cards. Having been an active participant since September 15 and having uploaded most of my recent QSO records, now in excess of 6,500, the QSL record stands at only 92, pretty dismal considering that I have over a thousand QSL cards in my files.

Howdy all,

I think Carl is correct when he says it will take some time but the only way to hasten the project is to encourage folks to take advantage of it. I have uploaded 10,503 qsos with stations worked since 1992.

I now have 487 confirmations and eight of them are new band countries. Four from 2003, one from 2001, one from 1998, one from 1997, and one from 1993. Several of these I have been trying to confirm for a long time and have sent several cards. I consider this a fairly good response for the short period of time LoTW has been active. There are a large number of contest logs in the mix but there are some pretty rare DX logs also.

With only 6,640 certificates active we certainly have a long way to go to approach full usage. I don't know how many active DXers there are in the world or how many DXers are listed in ARRL's annual DX list so it is tough to know what percentage we have in LoTW. When Ducie Is. became a new entity they logged 51,000 qsos with over 22,000 unique callsigns. Because this was an all time new one it would seem that the total number of active DXers in the world must exceed 22,000 so there are a lot of them that are not yet on LoTW. That coupled with the large number of contest stations should make the figure for major users in the vicinity of 30,000 plus.

I don't know what all of this means but it is something to chew on while we wait to see what happens over the years. I do know that if we talk it up at club meetings and on the air, and take the time to answer some questions, it will encourage others to join in the fun.

I don't think LoTW will ever completely replace paper QSL's (I certainly hope not).

Having said that, I think we're just starting to see the tip of the iceberg, since the program has only been in "production use" for a little less than two months. I'm pleased with my results so far --- I've uploaded 27,825 QSO's and received 1,697 matched contacts for about a 6% return. Far and away the majority (>90%) of these are US stations but even so I have 52 DXCC countries confirmed on LoTW, including one that I had been chasing "paper" QSL's for 18 years.

Hans,
I too hope that "real" QSLs stay around!
So far I have uploaded 53,218 Qs and have 2814
QSLs. It will take a long time for a large amount of folks
to get involved, and very many never will. This, however,
will probably affect the DX stations more than stateside.
It's just a lot harder for them to get certified.
I wish there was an easier way for them to get involved.
Then it truly could be a Logbook of The World.

Hello C.M.,

Sunday, December 14, 2003 C.M. Christensen wrote to ARRL-LOTW@yahoogroups.com:

CMC> but the only way to hasten the project is to encourage folks to
CMC> take advantage of it.

LoTW folks must think about it. There are many different ways to
encourage people use LoTW in addition to paper QSLs.

It could be prices discounts in case of LoTW participation (current
LoTW prices make using LoTW credits a bit more expensive just because
you do not have to pay 0.15-0.25 cents for each submitted paper QSL).
First of all, in case of LoTW, annual submission fees (20-30 USD)
should be deleted. Then, additional 15 cents for every QSL over 120
should be deleted as well, just because in case of LoTW this is an
automatic process without human participation.

DXCC Desk could give a DXCC accreditation to those only, who have
uploaded their logs to the loTW.

DXCC Desk could credit QSL cards from those only, who have uploaded
their logs to the LoTW.

DXCC Desk could take DXCC Award submissions from those only.....

etc, etc...

Here is an old message from Wayne Mills saying that they intend
to do much of what you're asking (reduce the cost of DXCC
processing for LotW credits) ... I had originally asked about
"buying" the credits in bulk.

As Wayne said ... "stay tuned"

758. Re: [ARRL-LOTW] QSL Records

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-14 13:36:16 UTC
From: C.M. Christensen
Topic: 750 Message: 758

Hi Art,

I agree that ARRL can do a better job of promoting LoTW and I know they are continuing to look at that as well as the fee structure. For me at least LoTW is far less expensive than the paper cards. Because the Buro method is essentially a waste of time with only about a 50 percent return rate I have resorted to sending most of my cards direct. If you add up the price of this it is significant. Approximately twenty cents for two envelopes and a card, eighty cents for postage, and two dollars for return postage makes the price of getting the card three dollars. A US station is allowed to submit 120 qsos for a ten dollar fee. The fee for those over 120 is fifteen cents per qso. Last year I submitted 320 cards with 360 qsos. Direct cards numbered 270 and buro cards numbered 50 (even these involve some expense). If you add all of this into a nice tidy yearly sum you will see that I invested the following:

$810.00 for direct mailing of 270 cards
$ 12.00 for buro mailings
$ 10.00 for ARRL fee
$ 36.00 for extra qsos at 0.15 cents
$ 8.00 for postage to ARRL
$ 8.00 for return postage
which makes
$884.00 for a hefty grand total -- from this total you can subtract $76.00 for 38 cards sent direct to stateside managers. This makes the actual total for the year $808.00.

Not included in this evaluation is the expense of sending cards to stations either direct or via the buro and never getting a card in return. This alone, at least in my case, far exceeds the cost of all 360 cards if they had been confirmed through LoTW. All 360 qsos, if they had been confirmed by LoTW at 15 cents each, would have cost $54.00.

I know that many folks continue to appreciate receiving the cards and I do too but I have over 6,000 cards and they represent every entity except Scarborough Reef and I am now only interested in band and mode countries.

Chris, all of your calculations are good for a newcomer, just making
his first QSOs now. As for me or you, I have about 1000 QSLs already
in my hand to submit to the DXCC, and I am not sure I will submit them
using LoTW, just because I don't want to pay 15-25 additional cents
for each QSL. Note that you will be have to pay 0.15 for every QSL
over 120 in any case. The other truth is that independently of the
LoTW most of us go on sending and receiving paper cards.

So do I, one QSO far from DXCC HR. Hope to join the club this winter
after Aves dxped.

You can upload your entire log to LoTW for free. There is no charge unless you specifically claim a qsl credit for a contact. You do not have to claim them both as a paper card and an electronic submission. You can choose one or the other and the result is the same -- you will get credit for the confirmation either way. The main difference is that by uploading your log you give others the opportunity to confirm the contact with you via LoTW. I have several instances where I have sent several cards to a DX station and have received no reply. I have emailed them and they said they received my cards but the ones they sent (?) never arrived. If their log is in LoTW my problem is solved. I can claim the credit there and stop worrying about the card getting to me.

Note that you will be have to pay 0.15 for every QSL
> over 120 in any case. The other truth is that independently of the
> LoTW most of us go on sending and receiving paper cards.

I am not sure I understand when you say you have to pay 0.15 for every qsl in either case. If you use LoTW qsls they are 0.15 per qsl if you use the lowest bulk rate. They have nothing at all to do with what you send in as paper cards. I agree that if I send 120 cards to the bureau

it will cost $10.00 and if I added an additional 400 cards it would cost
and additional $60.00. If I confirmed all 500 cards via LoTW it would
cost $75.00 which is $5.00 more. But, I do not have to pay postage both
ways, wait three months for the confirmations, and take a chance on
losing the cards. All of this also depends on how many cards you send in
each year.

Congrats on this Art. I have been chasing DX for many years and still
remember the thrill of every certificate and award. DXing is still the
main thrill for me in ham radio. Good luck on all of your DX ventures. I
am now trying hard to make the Honor Roll on rtty. That is a tough one!!

Maybe it will eventually catch on like eQSL.cc

I have received a fairly HIGH rate of confirmations on eQSL.
Hundreds of them in fact. I am a casual op too!

But I also work a lot of digital mode contacts who are
computer-literate and use such things a lot!

Brian,
I cannot imagine what happened to your cards. Most of us have received
ours in a very timely manner. mine was received in 2-3- days at the opening
of LoTW.
I had a problem and they had to issue me another certificate and it took
no time at
all to get straightened out.
Sorry that your experience has been a bad one. However, I'm sure it is a
very isolated
incident.

I had a long wait for the postcard but it turned out to be a
transposition problem either by me or the FCC on my address.

After getting very impatient and discouraged I found out that my FCC
address was 718 12th street instead of the proper 712 18th street. So,
I figure my problems were probably self-inflicted!

YO3APJ contest logs updated to LoTW including 2003 CQWW CW.
Printed QSL cards still available of course via W9OL.
USA---sase
NonUSA---sae/irc
Bureau---returned via bureau

But LoTW is the preferred method.

My hockey mom can beat up your soccer mom.

768. QSL,s are working here

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-16 00:50:25 UTC
From: Vince
Topic: 768 Message: 768

To the many that said that they are not getting QSL,s on
LoTW. I have submited 19000 QSO from my logs that
start in 1997, and have over 2500 QSL on LoTW, with more
coming in weekly.
Now if I only could claim some of them, it would be nice.

770. LoTW getting popular?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-16 21:10:22 UTC
From: Ron Wetjen
Topic: 770 Message: 770

Yesterday, I uploaded my 10 Meter Contest logs, and about 20 minutes ago, uploaded our M/S Sweepstakes SSB log.

The SS log was 1797 QSO's - had 238 QSL's within minutes.

The 10 Meter log was 850 QSO's - have 73 QSL's at the moment.

Total QSO records uploaded from various calls = 97,353
Total QSL records = 4,116

Uploaded QSO's only go back to 1991 (including DXCC QSO's back to 1976). QSO's from 1976 through 1990 are still on paper, and not sure I want to go back and enter all those into the computer!

I'd say folks are using LoTW quite a bit ... BUT, that use seems to be limited to a small number so far.

Happy Holidays.

The person who uploaded those logs probably set up the location
information incorrectly (like DL2FAG who insists he's in "deleted"
Germany, CQ Zone 28 and ITU Zone 14!).

I've been slowly converting my 1977-1985 contest logs to the computer and uploading them to LotW. At this point, I'm not sure its worth the effort ... the "yield" on those logs is less than 0.1% (fewer than 1 in 1,000 QSOs).

I have the same feeling. It will not be for LotW but just to have them all n
the PC for my own satisfaction. Luckily I don't have as many as some!
It still is gong to take a LONG time as getting 130 cards an hour would be
doing VERY well. The way some of them are written and the fact that there is
no standard way and that many are going to be wrong anyhow.

The biggest problem is that you have no idea what format they used for date
and time on old cards or even what time zone in may cases.

Don't count on much in the way of QSL for older cards.

I doubt I will ever get to the 18 full log books on paper that are mostly
without QSL cards.

Maybe I should be like IBM and hire it done off shore. Boy it sure was nice
to work for them in the 60-80s frame but stunk from 1989 on.

Hello all

Tim, T32ZM is obtaining a new certificate now. FYI the NONE option when asking for a cert is intended for Maritime Mobiles, or Air Mobiles, or those really rare places (are there any left?) that do not fall under a DXCC entity.

DL2FAG and DL2KQ are the only two stations we know of so far that incorrectly obtained certs for deleted Germany. Both certificates have been revoked and we are trying to get them started again so they can re-sign and re-send their logs.

If anyone sees anything funny in their confirmations in the way of a DXCC country being wrong please let me know.

Obviously we have all seen quite a few stations that have entered incorrect zone/grid/IOTA information, and we are contacting as many of those folks as we can. Most of these errors are pretty benign. When the Awards pages get going most of the bad data will not be useable. We will also remove any bad country data that still remains before the Awards section goes live.

We are planning to make the entering of zones/grids/iota in the station location more error-proof in the near future.

73, Dave, NN1N

What would really be nice is if you were required to enter your Lat / Longitude to the level needed to calculate any needed location information and let the program do the rest. That would be easy and foolproof. There really is no other way to reliably calculate the data. At the very least there should be a calculator provided that converts Lat/Long to this information and then you could enter it.

What the heck is "deleted" Germany?
Do you mean the old "East Germany" or what?

I think Germany Deleted was both East and West Germany. You had 2 countries.
Now you have one and any contact with West Germany or East Germany are now
deleted entities, no?

I think calling it Germany in the list was a big mistake as this confusion
is caused.

"Deleted" Germany is pre-1972 Germany. In September 1973
East and West Germany were recognized as separate
"countries." Frankly, I was surprised that the "old"
Germany was not reactivated and East/West deleted after
reunification.

The rules require you burn your hardcopy and wait and work a new P5.

seriously, can't answer why mine came up and yours didn't except
that Bruce may be uploading the logs piecemeal and he hasn't gotten to
your section as yet???

785. RE: [ARRL-LOTW] P5/4l4fn on LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-17 20:56:25 UTC
From: rojomn
Topic: 780 Message: 785

These ARE the same station and OUGHT to be treated that way by LotW in my opinion. This type of thing is going to cause a lot of nightmares and frustration for a lot of people.

786. Re: [ARRL-LOTW] P5/4l4fn on LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-17 21:18:05 UTC
From: FireBrick
Topic: 780 Message: 786

I meant to tell you to match your qsl cards call format to the entry in the
log.
If you transposed the portable, that could be the problem.
Not hard to fix,
Just upload the log qso's with the portable changed to LoTW.

787. Logbook of the World -> CSV conversion utility

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-18 00:41:20 UTC
From: Jim Reisert AD1C
Topic: 787 Message: 787

I wrote a Logbook of the World (LoTW) to CSV (Excel) conversion utility. Some people in the Yankee Clipper Contest Club were interested in such a utility. Download it from:

http://www.ad1c.com/HamRadio/lotw2csv.zip

The program reads the "lotwreport.adi" file that you can download from the ARRL site and produces a comma-delimited ASCII file that you can read into Excel or other spreadsheet program.

The program is mean to be run in a DOS box under Windows. It will not run in stand-alone DOS.

If you run the program with no arguments, it will attempt to read the input file "logreport.adi" and write the output file "logreport.csv".

C:\tools\lotw2csv <ENTER>

You can also specify an input file name, in which case the output file will have the same name, except with a ".csv" extension, i.e.

C:\tools\lotw2csv ad1c.adi

which will produce the output file "ad1c.csv"

Please send me any comments etc. directly. I do not presently read the ARRL-LOTW reflector.

We already have to do too many uploads and many are not going to bother. That is not an acceptable solution. Anything that the computer can do better it should do. Unless I really really need that contact myself I certainly not going to bother and most other won't either. Lets see 2 uploads so I get it both ways should do it. Man I hope you have a lot of storage available if everyone stars doing this sort of thing, already needed for station locations and such. This is a really big mess when someone goes mobile on county line!

790. small wish list item

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-21 14:38:26 UTC
From: FireBrick
Topic: 790 Message: 790

Really a minor type request.
Maybe other LoTW users would like it, maybe not.

As a manager I have a number of certificates
I've uploaded MY entire log also.

But when logging on, I see an aggregate total of qso's/qsl's.
This may not be useful for ANY purpose but I would like to
see a breakdown such as:
Log 1 xxxx qso's, yyyy qsl's
Log 2 etc. etc.

Sure there are more important issues to work on.

Happiness is not a destination. It's the trip.

Bill H. in Chicagoland

791. What is the mode

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-28 02:19:17 UTC
From: gbaron
Topic: 791 Message: 791

For a match to confirm a QSL is RTTY and BPSK and QPSK and MT63 and all the other digital keyboard modes considered the same mode or is it not a match. Since for Contest purposes they almost always are the same and I thought ARRL considered them all RTTY they ought to match. Do they? If not, why not?

792. TYA11 logs now on LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2003-12-31 20:24:28 UTC
From: FireBrick
Topic: 792 Message: 792

TYA11
yep it's Tango Yankee Alpha One One
This is a log of Jacques Bernier from Benin.
It's one of the W4FRU managership logs and it's now online at LoTW.
This logs is for the June 19th, 1981 through June 21st, 1981 only.

I will continue to provide hardcard qsl's.
USA requests require sase.
Non USA requests require a sae/1 IRC or equivalent postage.
All bureau request will be replied via the bureau.

As these were handwritten logs, I tried my best to insure accuracy
but an error in deciphering may have occurred.
If you are NIL. Email me with qso particulars and I will double
check and make corrections if needed.

This log was one of the rescue projects of the QSL MANAGER'S SOCIETY.
Check out the Web Page at www.qsl.net/qslmanagers/

Who is General Failure and why is he reading my hard disk?

793. LOTW logs for several calls

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-04 00:08:26 UTC
From: k7xm
Topic: 793 Message: 793

I have been trying to create logs for all of my former calls and am not having any luck at all. I have gone to Preference/qso/qso date/ changed to RANGE. I have then used the filter Selection to select the beginning date and ending date for that particular call. All looks good. I then save that log under the call for which I'm working. I then reopen that log only to find my complete log. In other words I have the right name on the log but the data for my complete log for which I'm selecting from. The dates for that log are 26/03/1975 thru today. I'm trying to select 26/03/1975 thru 26/06/1975, for my novice call WN6KCX. What am I doing wrong??? I have a few more to do as well. HELP!!!!!!!!!!!!!
Thanks,
K7XM
Hugh

Topic: 793 Message: 794

I selected the different calls by using my logbooks selection system.
But...
I may be wrong....but check the date format:
I thought the selection system uses yyyy-mm-dd format.
maybe I'm confusing that.

I asked for 3 different certificates, WN9VOL, WA9VOL, & W9OL.

I have several call on LOTW and no problem. As Ron mentions, you need a separate certificate for each call.

I don't see a Preference/QSO menu on TQSL or TQSLCERT, which leads me to assume that you're having problem with your logging software, not with the TQSL applications.
Is that the case? You're trying to export an ADIF log file from your logging application? If so, please let us know what you're using.

For DX4WIN (what I use) - you set up a filter for the date range then invoke the export function. The resulting ADIF file only contains records matching the filter.
Saving the log doesn't obey the filter as far as I know; if you really want a separate log file for just the WN6KCX call, export those QSOs in ADIF then import the ADIF file into an empty log. If you're not using DX4WIN, you'll probably need a different set of steps.

Topic: 798 Message: 798

Yesterday I wanted to put all my LOTW stuff on a CD but to my dismay my computer suddenly doesn't think it has a CD drive. It actually has a CD ROM and a CD-RW drive but nowhere can either be found.
They both are there, they open and close and the CD ROM worked 2 weeks ago. They are not in any directory including "My Computer" and if I try to play a cd it says "The system can not find the device" (both drives).
What would make the drives "disappear"? More importantly, how can I get them back?
I am running Windows 98 and I have not been in the cabinet.
TIA

No, I was told by ARRL I use my current call for each old call I have. I haven't got as for as converting to send to LOTW log site. I'm still trying to just gather the logs for my former calls.
Thanks
Hugh

Do you have a separate certificate for each call?

The way I understood it, and currently have it working.
You use your CURRENT call to get the first certificate.
Then you apply for and 'SIGN' a new certificate for the other calls you had.

Then when you create your .adi file for each callsign, you use that callsigns certificate to 'Sign' that .adi file for that particular callsign.

Sort of...the first Certificate you apply for (you present callsign) give you the bona vides to request alternate Certificates for your past callsigns.

The problem comes in that ARRL uses the FCC database to confirm that your present callsign was indeed licensed to you.
Your previous callsigns can no longer be vetted as they are no longer in the FCC dbase.
So you use the Certificate that is in the FCC files to apply for other callsign certificates.

Boy I hope I said this correctly....
If not...in the words of Saturday Night Lives' Emily Luttila.."NEVERMIND"!

Go to the control panel and see if the hardware is found. If it is then do a remove and reboot. It should find it again.
If you cannot find it in Control Panel/System/Device Manager/Hardware then you can try disconnecting the hardware and doing a reboot and then connecting it again and doing another reboot. It should find it and you should be ready. I am assuming that the devices are IDE devices. If they are proprietary connected to sound cards or SCSI then you have to go through the whole install process again. I don't know anyone still using that type of device today though.

802. Why only one call at a time in LotW "Find Call" area?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-08 18:47:01 UTC
From: Bob Daniels
Topic: 802 Message: 802

Does anyone besides me find it annoying that in the "Find Call" area of the LoTW web site you can only check one call at a time? Why can't we just see who all has logs entered? A downloadable list would be great.

I've been told that this keeps folks from trolling for busted calls. That doesn't make any sense to me. The "Find Call" area only tells you if a particular station has entered log data. It doesn't tell you what is in the log.

I have literally hundreds of stations that I would be interested in knowing if they have entered a log or not. I could find out if I sat down at the computer for several hours and entered each one individually. So this isn't information that's off limits, its just information that has been made very difficult to get.

The reason this interests me is because I have had two occasions where messages posted here announced that DX stations, that I worked, from the distant past sent logs to LoTW. For these two stations I wasn't in the log as it was initially entered. If someone had not taken the time to post those messages I would have never known that I needed to get in touch with the other station to make corrections. Both of them turned out to be old paper logs that had been reconstructed (with a few typos).

It sure would be easier to get info for who has sent in a log from LoTW than it would be to watch for "Announcements" on all of the discussion groups.

Bob,
I can download the ADIF file into my logging program then sort according to
callsign. That seems to give me what you need...hi.
Good luck.

"E" Sorter for the ARRL W5 QSL Bureau
Williamstown, WV

805. A4XYS is uploaded to LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-08 19:37:25 UTC
From: FireBrick
Topic: 805 Message: 805

A4XYS logs for Sept. 1983 through March 1984
have been uploaded to the LoTW.
I'm still working on some of them.
I will continue to provide hardcard qsls upon
request.
USA only require a sase.
Non USA only require a sae, 1 IRC is sufficient.
All bureau requests will be replied via the bureau.

If you feel that you have a qso that is not included
in the LoTW log, feel free to email me with particulars
and I will re-examine the log.

If everything seems to be going well, you have obviously overlooked something.

Tom
Thanks for the reply. I am aware that I can download all of my QSL's from the LoTW web site and sort them any way I like. In this case it isn't my QSL's I'm interested in. (Well okay I am interested in my QSL's, but indirectly in this case.).

What I would like to know is the Call Signs for all of the logs submitted to LoTW. You can get this info from the "Find Call" area in the LoTW web site. My problem is you can only get this info one call at a time.

Currently I have thousands of QSO's entered into LoTW that have not been matched, so there is no QSL. So in the future if one of those stations uploads his log I should automatically get a QSL. But what if there was a logging error like I described before. I wouldn't get the QSL. Heck I wouldn't even know he uploaded his log unless some kind soul made an "Announcement" on the message board or I just happened to pick that one call out of thousands to try in the "Find Call" area.

Glad to hear from Gerry VE6LB that he heard that this was being considered as a future enhancement.

I'm not sure why you would want to do this.
Just upload your log. If the other person uploaded his, and you have a valid qso, it will show up.
If it's posted that a log was uploaded and your qso doesn't show, then email/send a qsl card with a note explaining.

By making it one at a time, it makes it more tedious to troll.

Now I've made a couple of posts about my uploading some logs I manage qsl's for.
I've as yet to received a single email asking me to check the log at a time/date to see if I misread/typoed.

I have to agree here. There will be no errors in the vast majority of cases since the vast majority of operations that are going to be in demand are using computerized logs, not paper. That means that a typo is not possible since it can't be verified. hat is in the computerized log is it, right or wrong.

OTOH since this does not allow for trolling it would be a nice function to have but I would hope that they work on award and contest functions first. If these don't happen AND SOON, then LotW will die and will deserve to die.

If the major awards are not supported within the next 3 months, or at the very lease a hard date for support given, it is going to be the begging in of the end it seems to me.

Topic: 802 Message: 809

It would be of interest to know who LOTW users are.

From appearances, it's heavily weighted to US and Canadian contesters.

One purpose I can see for having a list of user available is for the fellows that don't computer log. I know of several folk that still paper log and intend to continue to do so. They would use LOTW for those Qs that are likely in the data base (calls listed) and they would upload small batches of their Qs created manually thought TQSL.

From: R Johnson
Topic: 802 Message: 810

Hi:
You seem to miss the point of Bob's request.

He is not looking for the matched QSO, but rather WHO has uploaded logs to LOTW.
He already knows who has uploaded logs that cause matching QSO's.

What Bob wants is a list of ALL CALLSIGN that are registered (have active certificates)
with LOTW so he can check his log for NON-MATCHING QSO's.
I.E. those that he has in HIS UPLOADED log and CALLSIGNS that have UPLOADED to
LOTW THAT didn't RESULT IN A MATCH.

Bob can then contact the station in question and try to resolve the mismatch.

THIS IS NOT a TROLL !!!!

It would also be nice to see the Time/Date of their LAST UPLOADS. Just incase4 they
are doing their logs on a one at a time basis !!!

THIS STILL IS NOT A TROLL !!!!

I hope that is not the truth. If it is then the usefulness is greatly diminished to the point of why bother. LotW MUST be for the majority of DX operations or it is worthless.

It would be of interest to know who LOTW users are.

From appearances, it's heavily weighted to US and Canadian contesters.

One purpose I can see for having a list of user available is for the fellows that don't computer log. I know of several folk that still paper log and intend to continue to do so. They would use LOTW for those Qs that are likely in the data base (calls listed) and they would upload small batches of their Qs created manually thought TQSL.

I have to agree here. There will be no errors in the vast majority of cases
since the vast majority of operations that are going to be in demand are using computerized logs, not paper. That means that a typo is not possible
since it can't be verified. hat is in the computerized log is it, right or

wrong.

OTOH since this does not allow for trolling it would be a nice function
to
have but I would hope that they work on award and contest functions
first.
If these don't happen AND SOON, then LotW will die and will deserve to
die.

If the major awards are not supported within the next 3 months, or at
the
very lease a hard date for support given, it is going to be the begging
in
of the end it seems to me.

Why? Don't remember reading that LoTW is strictly for DXers.

I though LoTW is for anyone to use ... DX'ers, ragchewers, contesters, etc. Right now, the majority of users (or those who generate the most numbers) appear to be contesters who upload their logs shortly after a contest. What's wrong with that? If that's not correct, I simply won't upload anymore logs, since I don't want to diminish LoTW's usefulness for the rest of you.

73, Ron WD4AHZ

101,969 QSO's uploaded
4,898 QSL's

Nobody says you should not use the LotW. What I am saying is that the majority are as you say are contesters but the main need is for DX. The reason that many are from Contesters is that all or nearly all use logging programs in the contest and that makes it easy to upload. The real need and the main reason it was created was to handle QSL from DX fest and cheap. Uploading your contest log is a very good idea too IF the contest robot becomes active and if you did not have to upload twice (what a ridiculous situation) and if DXers upload all the expeditions. that would be the big plus. It would also be good if all DX stations would upload logs. If the majority of entities do not do this and if contests and awards are not made easy then I just think it will get less use and die.
The more the merrier. Do not stop uploading but if using it for credit does not happen soon what have you gained, nothing.

Ahhh ... and why don't they? Could it be because if they give away a "FREE" QSL on LoTW, no one will need to send them money for a postcard to help fund their exotic trip? That's one, of several, reasons I've given up the chase for "wallpaper". I don't feel I should have to pay for someone else's "fun". A postcard is just not that important to me. Give me that credit on LoTW, and I'll be a happy camper!

Yes, it would be nice if everyone would upload their logs, but it's not going to happen. I imagine some folks still paper log, and some newer hams don't keep a log at all, since it's no longer required! (Ever get a QSL or try getting a QSL from one of these?)

As others have already said, it WOULD be big plus if/when the ARRL gets their awards programs tied into LoTW. Then it would make it worthwhile to upload any kind of logs. Maybe that'll help. I realize LoTW is still a work in progress and am patient enough to wait until all of it's features are ready to be utilized. I also agree, the sooner they are, the better.

Yes, that is the problem or at least many think so. Itwould be interestingto know the real tory offinance. I think very little is from green tamps for the majors. I think a trip to a nice acation spot that is neat but way downthe most wanted is perhaps one that should inance itself. OTOH Those may count on green stamps, but I doubt they get that many?

This thread began as I was working my way through the latest box from the bureau, and just for fun, I decided to look and see how many of the obvious DXpedition QSLs were also reflected in LOTW. I was blown away -- virtually all of them, and a few relatively rare ones that clearly weren't DXpeditions, came up as confirmed QSOs in the LOTW system. Examples:

T32CY, CE0Z/OH3JF, FK8GJ,HZ1AB, YB0DX, 4S7VK, ZD7K, D68C, ZL7/G3SXW, 8Q7IJ, VP8SDX, 9G5SX, H2G, VK9CXJ, XU7ABR, EY90MT.

The perception that participation is mainly W/VE, and that DXpeditions won't play, clearly is not borne out by this small sample. I suspect that the pattern that will emerge is that even the major high-cost dxpeditions will participate, but with a delay so that those who just have to have their QSLs NOW can be induced to contribute.

73, Pete N4ZR
LOTW/DXCC 90 confirmed
75,827 QSO records
3,261 QSL records

As they say on the cluster BINGO! You hit the nail on the head Pete.
I've noticed the same thing.
The group that went to Kiribati last month had their logs on LoTW practically the day they returned.
(btw: I sent them a donation anyway)

I've noticed much greater response from NonUSA hams lately.

I really love the 'doom sayers' and 'prognosticators' who demand results now.
It took almost 40 years of hamming before I got my logs onto LoTW.
I guess I can wait a year more before all features are implemented.
And if it takes longer...well I guess I'll just wait a bit longer.

Sheesh. "I want it my way, and I want it yesterday". Probably the same sort that didn't send a donation to the anti BPL fund either.

I've worked several of those and no QSLs in LoTW. In fact, all of the callsigns in the list above come up with "No log data found" when I look them up in LoTW.
Does that mean the "Call Sign Activity" lookup is broken? How do you have confirmations from those calls?

For example, I have 4 QSO records in LoTW with D68C in 2001. None of them are QSLd. However, since the system says they haven't uploaded a log, I haven't worried about that. Now, I'm concerned that there's something not right here.

That's quite correct - for me, there's YA5MM, FO0AAA (Clipperton), and VK0IR (Heard) among the interesting DXCC entities that I have LoTW QSLs from. QSLs are slowly arriving, but that's understandable given the level of effort necessary for a non-US ham to get a certificate for the system.

I don't know when all those logs were uploaded, but it was before early December, because I just went back in my QSLs chronologically that far. All I did was type the callsign in the call field on the lookup form. Of course, unless YOU have a matching QSO, nothing will come up.

I just tried a search on d68c, after the chronological QSLs search, and had nothing come up! So then I used the clear form button on the lookup form, re-entered d68c and up they all came. It looks to me as if the chronological search for QSLs is setting some variables that need to be cleared manually before a single call-sign search works.

Maybe this is what is happening to you(?)

Could it be that the query is showing the ones in YOUR log??? I have
numerous qso's with D68C for example, but the LoTW doesn't show them
uploaded yet.
Likewise, during BETA testing I showed VP8THU confirmed, but they haven't
uploaded the logs yet "for real".

Pete,

My math from your numbers is 90 DX out of 3261 QSL Records =2.76% DX. That, to me, appears heavily weighted to W/VE usage.

I certainly believe that over time more DX stations will become users. Also some Expeditions and DX contesters are coming on board which is great.

It's nice to see the upcoming 3B9 Expedition trying real time LOTW and hoping they get financial support without the "few buck with the card" method. Should this contribution effort fail, it will not encourage other Expedition to do the same.

Personally, I think the LOTW is a great tool and off to a good start. There simply need to be encouragements for DX stations and Expeditions to get on the band wagon.

>usefulness for the rest of you.

This thread began as I was working my way through the latest box from the bureau, and just for fun, I decided to look and see how many of the obvious DXpedition QSLs were also reflected in LOTW. I was blown away -- virtually all of them, and a few relatively rare ones that clearly weren't DXpeditions, came up as confirmed QSOs in the LOTW system. Examples:

T32CY, CE0Z/OH3JF, FK8GJ,HZ1AB, YB0DX, 4S7VK, ZD7K, D68C, ZL7/G3SXW, 8Q7IJ, VP8SDX, 9G5SX, H2G, VK9CXJ, XU7ABR, EY90MT.

The perception that participation is mainly W/VE, and that DXpeditions won't play, clearly is not borne out by this small sample. I suspect that the pattern that will emerge is that even the major high-cost dxpeditions will participate, but with a delay so that those who just have to have their QSLs NOW can be induced to contribute.

73, Pete N4ZR
LOTW/DXCC 90 confirmed
75,827 QSO records
3,261 QSL records

Probably not THAT heavy a tilt. That was 90 DXCC *entities* confirmed,
most of them multiple times. But yes, so far acceptance is clearly
predominantly US and Canada.

Pete I agree with Chuck. I think you are seeing only the logs YOU uploaded and not confirmations. If you check "Find Call" on the LoTW page none of these logs (of the ones I checked, including D68C) show as even being uploaded. If you check them under the category of "Your Qso's" they will appear but there are no confirmations associated with them.

My apologies to everyone -- I had overlooked the checkbox om the search form for "Confirmed QSOs only." Those WERE indeed only the QSOs I had uploaded. That'll teach me to do these things at 3 AM!

That being the case, the only good example of LOTW participation by DXpeditions that leaps to hand is 3B6RF. Hopefully, since the people doing 3B9C are the same ones who did D68C, the latter will come up on LOTW soon as well.

Last time I checked, I had over 80 'entities' in LoTW. Most, obviously,
are pretty garden variety, but I'm sure there were some good DXpeditions in
there too. VK0IR and A52A for sure, and perhaps some others that didn't
'pop up' when I glanced through the list.

Same here Hans -- I think I have about 75 entities out of 532 confirmations but nine of them are for band or mode entities and it will at least save sending in cards for those contacts. In fact, I do not even have cards for some of them.

Like you, most of my confirmations are garden variety and many are rtty contacts. I work quite a few rtty contests so that is to be expected. There are, however, some rare ones too.

We all know it is going to take time for everything to get up to speed but I still think the concept is terrific. There will never come a time when we will not have to send in some cards. Some operators will never be able to use LoTW and some will just never take the time to get their act together. As the years go by we will see fewer and fewer cards and more LoTW and every little bit helps.

The price for direct qsling will continue to rise and encourage at least a few more operators to join. I have essentially stopped using the bureau except to answer cards that were sent to me by that route. I find the percentage of returns via the bureau to be way to low to even bother using it.

From: Bob Daniels
Topic: 802 Message: 830

After reading all of the other messages on this thread I can see I'm not the only one interested in knowing who has loaded a log into LoTW.

I have to agree with those that said that getting the Awards tracking up is much more important than providing a downloadable list of LoTW users.

But watching everyone try to figure out who has and who hasn't uploaded logs has been very entertaining and informative. It kind of shows why it would be nice to get the Call Signs from the LoTW site en mass instead of one at a time.

I realize that LoTW is a work in progress, and I know it will take time to get everything clicking. I don't need to have a downloadable list right now. I just hoped that this would be one of the things that the developers would consider in the future, and apparently it is.

73's all

Just comparing my "real" log to LoTW.

My "real" log shows I have 330 CW entities worked, 322 confirmed, and 8 not confirmed. LoTW shows I have 65 CW entities worked. Of those, only 1 (EY) is one I don't have a card for.

On the other hand, LoTW CW WAS looks a bit better, with 49 States on 10 (WY) and 15 (SC), 48 States on 20 (ND, SC), and 47 States on 40 (KS, ND, OR). I'm not even close to those numbers in my "real" log (haven't done any QSLing specifically for single band WAS).

I guess that shows who most of the users are at the moment.

Ron

832. KB4ATV/4S7 logs now on LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-09 22:35:16 UTC
From: FireBrick
Topic: 832 Message: 832

KB4ATV/4S7 logs for April 4, 1984 through April 8, 1984
are now on LoTW.

I will continue to provide hardcard qsls upon
request.
USA only require a sase.
Non USA only require a sae, 1 IRC is sufficient.
All bureau requests will be replied via the bureau.

If you feel that you have a qso that is not included
in the LoTW log, feel free to email me with particulars
and I will re-examine the log.

When tracing ancestors, please stay within the lines!

As they say on the cluster BINGO! You hit the nail on the head Pete.
I've noticed the same thing.
The group that went to Kiribati last month had their logs on LoTW practically the day they
returned.
(btw: I sent them a donation anyway)

I've noticed much greater response from NonUSA hams lately.

I really love the 'doom sayers' and 'prognosticators' who demand results now.
It took almost 40 years of hamming before I got my logs onto LoTW.
I guess I can wait a year more before all features are implemented.
And if it takes longer...well I guess I'll just wait a bit longer.

Sheesh. "I want it my way, and I want it yesterday". Probably the same sort that didn't
send a donation to the anti BPL fund either.

Hi Leo,

Go to TQSL Certificate and click on Certificates and look at the dates
in Certificate Properties. There is a Begins date and an Expires date
and also a QSO Start Date and QSO End Date. The end dates should be
approximately one year from when you received your certificate. If these
dates are ok then there must have been something wrong with your upload.
I have uploaded twice in January, 2004 and they went in just fine as
have many other uploads from other folks. Good luck.

It is also important that they set up for other awards, like US County for instance. I fear that jealousy and competition may prevent this from happening. It would be a terrible tragedy if that happens and LotW will be a big effort that does not realize the potential. I hope and pray that I am wrong. It is going to be up to ARRL to give this the HARD sell.

ARRL has stated that they intend to work with other award sponsors. The
US-ACA would be one -- but I don't even know who manages it. I'd sure like
to see WAZ and WAS confirmable through LOTW, as well as IOTA and various
other major awards. From the standpoint of popularizing LOTW outside the
US, we need the big DX awards onboard.

I guess I don't see the jealousy angle -- they would still be the sponsor's
awards, not ARRL's. I presume the mechanics about how much an award
applicant would pay, and how much of that would flow on to the sponsor, all
remain to be worked out...

Pete,
Being a county hunter for hundreds of years(seems like),
I can address some of this.
CQ is the sponsor for USA-CA, and of course for WPX, and WAZ, as well
as their own DX award.
Another sponsor of many County Hunter awards is MARAC. The Mobile
Amateur Radio Awards Club. There are lots of variations for working all
counties. MARAC awards do not require QSLs. So they may not be too
needed for LOTW consideration.
It would be very cost effective for USA-CA, however. Confirmations are
required for
it...that's a bunch of cards...and then when some of us are trying to work
em all
on 5 bands...well, you know.
Getting ready for the big move....boxes, boxes, boxes...ugh!

Just a note about confirmations. Keep submitting your logs and
data. Confirmation wise, I am up to 5.7% and still growing. As expected,
the non US confirmations are beginning to trickle in. I had a total of 5
new ones last week. It's like the lottery. You have to play to win. It's
a great program. I love it.

Even though I'm pretty well up there in Challenge totals, I've still received 17 qsl's via LoTW that I'd previously had no luck in getting band/mode confirmations.
Thanks to those people who submitted logs.

Starting to see more non USA qsls. Let's keeps the logs coming in.

Moaners, nay-sayers, and whiners need not reply.

859. LOTW surpasses eQSL in records

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-27 23:15:35 UTC
From: Beischel
Topic: 859 Message: 859

LOTW showed 33.1 million QSOs loaded today where eQSL only shows 33.0.
First time LOTW beat eQSL on a given day. LOTW is growing much faster.

What do you mean on a given day? Those are totals, not daily counts.

LotW says 33.2 million QSO records entered into the system while
eQSL says 33.0 million eQSLs. I know what QSO records are but
what constitutes an eQSL record?

That said, LotW is certainly growing much faster than eQSL. I'm
seeing ever more DX QSLs (as opposed to QSLs for contest QSOs
from domestic stations). It looks like LotW is rapidly reaching
"critical mass" if it's not there already.

863. LoTW QSO numbering and an update

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-28 18:59:28 UTC
From: Patton, David NN1N
Topic: 863 Message: 863

Hello LoTW users

~$From: R Johnson [mailto:k1vu@...]
~$Sent: Wednesday, January 28, 2004 12:53 PM
~$To: ARRL-LOTW@yahoogroups.com
~$Cc: Patton, David NN1N

~$Hi:
~$These QSO numbers from LoTW are strictly BS in my opinion !!!!

The numbers provided for counting QSOs and QSLs are there for fun and serve no useful purpose. They do indeed count logs that were sent-in with someone using the wrong certificate and then sent-in again with the correct certificate. They also include lots of identical logs that are sent in with two sets of calls to account for the ways others may have logged the QSO, such as NT1N and NT1N/2. One should not use the numbers to keep track of what logs are sent-in etc. The activity files take care of that.

~$
~$I have approximately 5073 QSO's uploaded to LoTW !!!
~$
~$LoTW show's that I have 7620 uploaded as op today !!!
~$
~$This means that LoTW that LoTW has me credited with UPLOADING
~$about 50% more
~$QSO's than I actually have !!!

That's probably accurate.

~$
~$I have contacted the ARRL (NN1N and subordinates) about this
~$problem and have
~$received NEGATIVE results from my inquiries.

If you mean way back when when you asked if you could delete the wrong data that you sent-in, that's correct. The answer was negative, you cannot do that.

~$
~$I have been working with LoTW since the early stages of the
~$BETA test and kept
~$getting messages that they were going to correct their method
~$of counting
~$QSO's and CREDITED CONFORMATIONS !!!

We do have some things to fix. Those who have obtained renewed, or replaced certificates will have new usernames too, and the numbering doesn't follow over from the old numbers (K1VU and K1VU01 for example). We are working on a fix for the username problems (that aren't really problems, the data is there and will be the same for awards, it's just a

counting issue).

~$
~$I have CEASED to upload ANY HF QSO's latter than 7/30/03 to
~$LoTW, with the exception
~$of any GENERAL and VHF/UHF QSO's !!!

Why? Or, why some of them?

~$
~$I have asked the ARRL LoTW program to DELETE any QSO UPLOADS
~$from me so that I
~$might CORRECT any UPLOADS from my station that do not MATCH
~$the LoTW requirements !!!

Almost all the data that goes into the system under incorrect certificates, or with date/time/call errors etc., is of no harm and no consequence other than using a bit more storage in LoTW. We would have to shut the system down and waste time and resources to track down and remove this data. We may get to that someday, but not now.

~$
~$ALL my requests to date have been met with a NEGATIVE response !!!

I assume that means "No you can't do that" negative response.

Quick progress update; We are working hard on the Awards page implementation. We have identified some interesting issues to be worked-out and Jon has done a terrific job building the architecture for a global awards utility. We will put it up there as soon as we can.

There are 600 certificate applicants from outside the USA for whom we are awaiting documentation, and a similar number of US stations that have been sent a postcard and not yet activated their certificates. We are VERY pleased with the interest shown in LoTW at this early stage in its life. Thinking about the number of active stations/operators who participate in DXCC and other awards chasing, we have realized that we have just started to skim the top of possible/probable users in the system. It wouldn't surprise me that by the end of 2004 we will have between 15000 and 20000 users.

We are also very impressed with the amount of effort given to placing old logs into the system. W9OL, WA4JQS, K4UTE, KC7V, and many others have put considerable effort into this. There may not be immediate pay-offs in QSL matching but it serves the purpose of backing-up history.

73, Dave, NN1N

Pretty sure I read in the FAQ's that:
You can't delete.
You can upload the correct one, the incorrect one may be overwritten depending upon the error but most likely will be retained but will not cause a problem.
I'm sure I read that a exact duplicate will just overwrite and only one instance will exist for that qso.

You cannot do that but you can change them and upload again. Since the wrong ones will not match they have decided to just leave them. I am not truly comfortable with that deign because one could troll that way but that is how it is.

How can one "troll" LoTW? All you can see are your own QSO's, and what good is a bad QSO anyway? If you "bust" it, you don't get credit for it.

Ron

868. [ARRL-LOTW] delete QSOs

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-28 20:13:43 UTC
From: JV
Topic: 862 Message: 868

Last night I added the 160Meter CW QSOs for last weekend's contest. My
DXBase log has 4933 QSOs in its log. After uploading, LoTW showed only 4918.
I said "no problem", I would resubmit the entire log which I did. Now I have
5089 in LoTW with many dupes. It needs an edit file some kind of bad.
Also, why can't the QSOs/QSLs in LoTW be made to use a vertical slide
bar instead of showing only 25 at a time. This sucks.
I get more irritated every time I try to use this program.
JV Staples KT4U

Of course!
You have to export it in the PKCS#12 format.
Launch TQSLCert, then click on the certificate you want to save, then
select Certificate/Save from the top menu.
You will be asked for a filename and then a password. Don't forget them or
you will never be able to use that certificate...

That's unfortunate... over time the system will have to bear the overhead of incorrectly uploaded data. For example, if someone loads a log with a date or offset... re-loading the data will double the number of records.

I understand that a record, once matched, cannot be deleted... but completely disallowing a delete function is doesn't make any sense to me.

Yes you can. Dave or Wayne told me how to do it but I can' find the email with the instructions.
It must have worked as I have it working on the new computer.

Email Dave or Wayne, I'm sure they will help.
But remember, you aren't the only email they will be getting and they have to wade through them so it may not be an instantaneous reply.

It is a easy thing to transfer to another computer.
Go to your TQSLCERT program and click on your certificate you want to transfer.
Go to the top and click on the certificate tab and a drop down will come down.
Click the save .
Then it will ask will ask where you want the "yourcall.p12" file.
You then save this file to a floppy and take that file and your "yourcall.tq6" file you received to the other computer.
Then on the new computer install the TQSL programs.
Go to TQSLcert program and click on file.
Then click on file go to load certificate file and follow the prompts.
It is easy.
Thanks

I simply copied the following folders from my old machine to my new machine.

- The folder containing the TQSL applications (TQSL and TQSLcert) and my sent QSO files.
- Copied folder: C:\Windows\application data\TRUSTEDQSL from my old machine to the same directory path on my new machine.

876. RE: [ARRL-LOTW] TQSL

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-28 21:44:53 UTC
From: Joe Subich, K4IK
Topic: 869 Message: 876

Run tQSLCert on the computer where your certificate is installed and
follow the following:

1) highlight your certificate
2) right click and select "Save"
a file save dialog will open with a file name
("yourcall".p12)
3) save the .p12 file to your zip disk
4) enter any password (just remember it) in
the password dialog (this is only used to save/restore
the certificate and can be left blank)

Take the zip disk to the new computer and run tQSLCERT there

1) Start tQSLCERT
2) Select File -> Load Certificate File
3) Select PKCS#12 (.p12) certificate file
4) At the file dialog navigate to and select the .P12 file
you created above
5) enter the password you used to create the .p12 file
6) enter your private key

That should do it ...

73,

... Joe, K4IK

A simple copy will NOT transfer the certificate as you will see when you try
to use it. You MUST use the save and import.
'I posted the method as have several others today.

881. reinstalling LOTW after crash

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-29 00:29:14 UTC
From: wb4mnk
Topic: 881 Message: 881

I have had to format my hard drive and start over and now have everything as it should be but I cannot figure out how to get LOTW working again.
The files I have on disk are .TQ5, TQSL cert, P12 file.
When I go to TQSL, File,Sign existing adif I get a warning (You have no station location assigned)I then click Ok, Click on new and get error (No certificates available)I have no Idea at this time how to correct these problems. Any help will be appreciated.

Art
WB4MNK

882. RE: [ARRL-LOTW] reinstalling LOTW after crash

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-29 00:56:15 UTC
From: Joe Subich, K4IK
Topic: 881 Message: 882

Art,

1) Start tQSLCert
2) Select File -> Load Certificate File
3) Select PKCS#12 (.p12) certificate file
4) At the file dialog navigate to and select the .P12 file
for your certificate (probably WB4MNK.p12)
5) enter the password you used to create the .p12 file
6) enter your private key

Now your certificate should be reinstalled.

7) Start tQSL
8) select Station -> Add Location
9) follow the normal process to enter the data for your
station location (grid square, ITUzone, Cqzone, etc.)
10) Save the location

Now you should be able to sign an ADIF normally.

73,

... Joe, K4IK

883. RE: [ARRL-LOTW] TQSL

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-29 01:06:39 UTC
From: Joe Subich, K4IK
Topic: 869 Message: 883

Gerry,

Copying "C:\Windows\application data\TRUSTEDQSL" from one
machine to another is fraught with problems and should not
be counted on to work on all platforms and under all versions
of the software.

I posted the proper (and safe) certificate backup/restore
procedure earlier. It is wise to use that procedure to
create backups for all of one's certificates (I keep copies
of all my certificates on a floppy and have burned a CD in
case I should need to install on a machine with no floppy
drive).

Without the .p12 file, should anything happen to the
"\application data\TRUSTEDQSL\" folder you will have lost
all your private keys, will have to register de novo with
LotW, and will lose all your LotW data (believe me ... I
learned the hard way when the problems with tQSL 1.08
wiped out my private keys and I had no backup!).

73,

... Joe, K4IK

A simple copy will NOT transfer the certificate as you
will see when you try to use it. You MUST use the save
and import.
'I posted the method as have several others today.

Subject: Re: [ARRL-LOTW] TQSL

I simply copied the following folders from my old machine
to my new machine.

- The folder containing the TQSL applications (TQSL and
TQSLcert) and my sent QSO files.
- Copied folder: C:\Windows\application data\TRUSTEDQSL
from my old machine to the same directory path on my
new machine.

From: rojomn
Topic: 881 Message: 884

This is a drastic remainder to back up your certificate and keep that p12
file in a safe place. If you crash and you lose that file it is impossible
to get LotW running again with the same sate you had before. You will have
to get a new certificate and that will not be a fun deal.
Save and probably save it twice.

885. Good Work LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-29 16:36:19 UTC
From: Keith Morehouse
Topic: 885 Message: 885

After some of the slagging this system has been taking in the last few days, I'm compelled to add my multiple cents.

Great Job so far LoTW !

I've uploaded almost 200,000 QSO's for contest station K9NS and almost 50,000 for myself. Which probably puts me in the top 5 (if not number 2 behind HC8N, depends on how many of the E coast multi-ops have uploaded logs...) of ALL users. So far, except for some errors on MY part, I have had no (none,nada) problems with the system.

I'm not a computer professional nor do I play one on TV - just a long time computer and Internet user.

It's amusing how every internet group has those that treat the topic of interest like a life or death situation. Except for a very few subjects, it's not. If the ARRL wants to waste server space and increase lookup times by a few hundred milliseconds through keeping duplicate or dead records, fine - let them. We're not paying for the CPU cycles. The variable latency of your internet connection is probably more then the extra time it takes to deal with dupe's in the LoTW system. If you object because it's "just bad code", then offer to help them re-write it (off list) for free.

Again - good job to all involved at the ARRL. I'm looking forward to the award system, but not like my next meal depends on it...

Keith (Jay)
W9RM
trustee K9NS

Amen -- I've uploaded only 75,000, and have about 3,600 confirmations so far, but have similarly had no problems with the system. I was pleased to discover that in the last 3 weeks I've gotten confirmations on 15 more countries, bringing my total now (solely through LOTW) to 97. I know that big multis like K9NS must be well over the century mark by now. This thing works!

You are correct in many ways. It works for big pistols like you but for those of us that barely have enough contacts to make our century mark it does not work at all YET! I think one day it will. For now if you only have one or 2 contacts with many of the countries you need then postal will have to do. OBVIOUSLY if you have 200,000 contacts you have a great chance, big deal!
It is also useless for other types of awards at this point.

Now I am still thinking it is a GREAT step forward and in the future may (probably will) fulfill it promise. It will be quite a while before it happens I fear, but HOPE I am WRONG. I again am not attacking this system. IT is all there is to do what should have been done long ago and one day it will really make all say "why did this take so long"

I wish I could brag of thousands and thousands of contacts, but I can't so there it is.

I don't mean that it does not work. The function works perfectly. It is only that it is mostly useless if you do not have a huge number of contacts or many with the more rare entities, because your chance of getting a match is much , much, much less than that of the big pistol. It is probably even less than the return rate of QSL via direct or even bureau.
It certainly is much less for me!

OTOH there may be a much better and much easier and cheaper set of QSLes from new stations that are in a contest or an expedition. The new contacts serious contester or dxpedition operations is where this is likely to shine, which is good and a very big incentive to upload your logs.

This is a GREAT system.
It just takes time for more people to get signed up.
It only started back in September of 2003.
It will be alot different a year or 2 down the road.
When I first uploaded my logs I only got 3 confirmations.
Now I have 909 confirmations with 5857 total qsos, it just takes time.

I certainly am a little pistol. I have just over 1200 contacts in the system with 74 returns, and I consider this total success.

Well your chance to getting a QSL is the same as your change of working
them. LoTW doesn't favour the big guns except that the big guns are more
likely to have the QSOs to confirm.

I've got 1999 QSOs uploaded and 130 QSLs. I've got plenty of QSLs for
which I don't have cards, though I haven't actively sought out cards
myself. But there are QSLs in LOTW for me which don't appear to be too
easy to get on paper. So I'm pretty pleased.

My point is that I have a CHANCE of getting a card form every single station I work via mail. Every station has some sort of mail address. It may be slow, it may be expensive, but it almost certainly does exist. OTOH for a LARGE number of contacts they do not upload to LotW so there is absolutely no chance of getting a card that way. Thais does not matter to the big gun that has worked so many that they have a much better chance of finding a station that does upload.

The other need is the ease of using them for awards. It is ZERO right now. It probably will change soon for ARRL DX awards , but , that is a small percentage of the total. If it is useless for other awards I still have to get the paper card so I have gained nothing in that case except perhaps a quicker credit for the few supported awards.

It is still not clear what all this awards support will cost. Currently the paper card can be sued for every award, so I need to go to the expense only once. If LotW charges separately for every award it will support and it supports a lot of them then the expense will be just as great. That is not acceptable and indeed it may not work that way. I have not been able to determine that answer since the rules are not out yet.

Until the chance of getting a card via LotW is equal to or greater than the chance of getting it by mail it will continue to be an unrealized dream. How soon this happens is anyone's guess. I really think the advantages of LotW are SO GREAT that EVERYONE ought to use it. They are a fool if they can and they don't. The question still remains though, will they? It is not answered yet.

I think you are expecting too much too soon. Who's to say that all or
most stations won't upload in the future?

The awards stuff is coming, next month I read on this list. It might
take time for providers other than the ARRL to get involved but there's
no reason to think that it won't happen in time.

From: Beischel
Topic: 859 Message: 898

Interesting, as mine shows exactly the same number as I uploaded. I wonder if you have uploaded some duplicate records that are different enough that LOTW can distinguish. For example, if the record is uploaded a a 20 meter CW contact and uploaded as a 14.028 CW contact with everything else being the same, that will show as two records even though it is the same QSO record.

As for eQSL, what constitutes a QSL - it is the same as a QSO record - there does not have to be any matching QSO record. A QSO record in LOTW is the same as a QSL with eQSL.

899. so which is more economical

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-01-31 01:34:30 UTC
From: FireBrick
Topic: 899 Message: 899

I've accumulated a bunch of cards to be submitted for DXCC/Challenge.
I've recently received a few cards that duplicate LoTW qsl's.

If I had known they were going to upload to LoTW I wouldn't have requested
the card and just sent the donation.

I've read that a LoTW qsl would be credited at approx. $0.25 each with a possibility
of a sliding scale.

This will be my first submission of the year, so that is $10.00
I have a less than 120 qso's on cards so no per/card extra charge if I submit the 6 cards
that are duplicates of the LoTW qsls.

That leaves approx. 15 LoTW qsl's at the $0.25/each rate or an additional $4.00.
So the question is, considering the weight of the additional cards to be sent to and
returned from ARRL DXCC desk, is it more economical to send the duplicated qso cards or
let them be
credited via LoTW.

Now I realize I've already saved 15 qso's worth of cards, stamps envelopes/irc or green
stamps by using LoTW.
This is purely an academic question for the more financially astute on the reflector.

Seeing as how there hasn't been all that much to discuss lately.

So what do you think, what is the bottom line?

The more beautiful the woman is who loves you, the easier it is to leave her with no hard
feelings.

If you're already doing a hardcopy submission (shipping to/from Newington rather than having the cards field checked) go ahead and send the cards. The weight of six additional cards should not be enough to make any difference in the shipping cost. At 120 cards or less you're probably within the limits of most of the flat rate, two or thee day small package rates.

Even if the six cards caused the package to weigh into the next pound, the increase in rate for USPS Priority Mail is $1.80 per pound at zone 8 (the maximum zone). If the cards qualify for "media mail" rates the step is $0.42 per additional pound.

Which also brings up the question of which confirmation will be used?

If you check the box to use LOTW QSLs and you also have "real" cards (or have use a field checker) there may be duplicates since your not specifying which to use. I'm sure there are those who don't track the LOTW confirmations closely and will simply check the box "in case".

This also brings up the issue of once the LOTW box is checked off, one no longer controls which confirmations are being credited to band/mode awards. For example, maybe I only want CW QSL credited (maybe not really chasing RTTY DXCC but play a bit and don't ever plan on applying for Digital DXCC) and don't want the expense of unwanted credits.

Top posted. Purely academic questions.

That brings up the question.
Are the LoTW qsl's credited to you records charged to you when you apply for the award?
I would think so.
I think when I qualified for rtty dxcc, I got a note asking if I wanted a certificate, etc.
If you say no, I would think there would be no application, hence no charge.
The qsl's would just sit in the bank in case you ever changed your mind.

But your right, if you had two different ops credited for BS7H on 160 cw. Can you choose which one would be the one that's credited.

Also, if you use a QSL for credit in multiple awards (eg WAS and DXCC)
do you pay twice?

From: N2TK
Topic: 881 Message: 904

I am having the same problem copying the files to a new hard drive. I installed the latest version of LOTW. I copied over the certificates from the old hard drive. However, I do not have any .p12 files. As I kept everything in this folder and my backups also didn?t show a .p12 file, I do not where it could have gone. Do I need to start over requesting a certificate?
I have my old certificates ? certs.tq6 and my request n2tk.tq5.
I tried running tqslcert.exe then selecting file > load certificate file > clicked tqsl , then next, but it was looking for a .p12 file.

I also tried right clinking on the .tq6 file, but I don?t get a ?save? command as listed below.

Any ideas?
Thanks
N2TK, Tony

Subject: RE: [ARRL-LOTW] reinstalling LOTW after crash

Art,

1) Start tQSLCert
2) Select File -> Load Certificate File
3) Select PKCS#12 (.p12) certificate file
4) At the file dialog navigate to and select the .P12 file for your certificate (probably WB4MNK.p12)
5) enter the password you used to create the .p12 file
6) enter your private key

Now your certificate should be reinstalled.

7) Start tQSL
8) select Station -> Add Location
9) follow the normal process to enter the data for your station location (grid square, ITUzone, Cqzone, etc.)
10) Save the location

Now you should be able to sign an ADIF normally.

73,

Tony, I have tried everything that was suggested and everything I could think of with no luck. I even E-Mailed ARRL help but have not had any response from them at all.
I did request a new Cert. and when I receive it if I do I will try it and see if it works. I guess if it does not work I will just use EQSL.

Subject: RE: [ARRL-LOTW] reinstalling LOTW after crash

I am having the same problem copying the files to a new hard drive. I installed the latest version of LOTW. I copied over the certificates from the old hard drive. However, I do not have any .p12 files. As I kept everything in this folder and my backups also didn't show a .p12 file, I do not where it could have gone. Do I need to start over requesting a certificate?

I have my old certificates - certs.tq6 and my request n2tk.tq5.

I tried running tqslcert.exe then selecting file > load certificate file > clicked tqsl , then next, but it was looking for a .p12 file.

I also tried right clinking on the .tq6 file, but I don't get a "save" command as listed below.

Any ideas?

Thanks

N2TK, Tony

Subject: RE: [ARRL-LOTW] reinstalling LOTW after crash

Art,

1) Start tQSLCert
2) Select File -> Load Certificate File
3) Select PKCS#12 (.p12) certificate file
4) At the file dialog navigate to and select the .P12 file
for your certificate (probably WB4MNK.p12)
5) enter the password you used to create the .p12 file

6) enter your private key

Now your certificate should be reinstalled.

7) Start tQSL
8) select Station -> Add Location
9) follow the normal process to enter the data for your
station location (grid square, ITUzone, Cqzone, etc.)
10) Save the location

Now you should be able to sign an ADIF normally.

73,

... Joe, K4IK

Art,

Don't give up. I had the same problem and contacted
Wayne Mills at 860-594-0291. I have erased all the
email that was sent to me so I can not tell you how to
cure it but it has to do with removing all tq 5 files
before installing the new certif. Sorry I can't be of
more help.

907. RE: [ARRL-LOTW] reinstalling LOTW after crash

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-01 01:25:05 UTC
From: rojomn
Topic: 881 Message: 907

If you can sign using the certificate on the original machine you are set. You simply go to the TQSL and do a SAVE of the certificate. THAT is how you get the p12 file, NO OTHER WAY.

Go to the second machine and LOAD the certificate. Then you are done. When all else fails, read the manual.

Art,

1) Start tQSLCert
2) Select File -> Load Certificate File
3) Select PKCS#12 (.p12) certificate file
4) At the file dialog navigate to and select the .P12 file for your certificate (probably WB4MNK.p12)
5) enter the password you used to create the .p12 file
6) enter your private key

Now your certificate should be reinstalled.

7) Start tQSL
8) select Station -> Add Location
9) follow the normal process to enter the data for your
station location (grid square, ITUzone, Cqzone, etc.)
10) Save the location

Now you should be able to sign an ADIF normally.

908. RE: [ARRL-LOTW] reinstalling LOTW after crash

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-01 01:32:36 UTC
From: rojomn
Topic: 881 Message: 908

I may have missed the point here. I thought it was to transfer the certificate to a new machine. If you did not do a save of your certificate (as warned at install time) so that you have the p12 file then you are out of luck. It is IMPOSSIBLE to recreate it , even ARRL cannot do that. That is how public key encryption works. You must get a new certificate and start over.

Subject: RE: [ARRL-LOTW] reinstalling LOTW after crash

Art,

1) Start tQSLCert
2) Select File -> Load Certificate File
3) Select PKCS#12 (.p12) certificate file
4) At the file dialog navigate to and select the .P12 file

for your certificate (probably WB4MNK.p12)
5) enter the password you used to create the .p12 file
6) enter your private key

Now your certificate should be reinstalled.

7) Start tQSL
8) select Station -> Add Location
9) follow the normal process to enter the data for your
station location (grid square, ITUzone, Cqzone, etc.)
10) Save the location

Now you should be able to sign an ADIF normally.

Tony,

On a WIN98SE system, these files are in C:\Windows\Application data\TRUSTEDQSL.

Subject: RE: [ARRL-LOTW] reinstalling LOTW after crash

I am having the same problem copying the files to a new hard drive. I installed the latest version of LOTW. I copied over the certificates from the old hard drive. However, I do not have any .p12 files. As I kept everything in this folder and my backups also didn't show a .p12 file, I do not where it could have gone. Do I need to start over requesting a certificate?

I have my old certificates - certs.tq6 and my request n2tk.tq5.

I tried running tqslcert.exe then selecting file > load certificate file > clicked tqsl , then next, but it was looking for a .p12 file.

I also tried right clinking on the .tq6 file, but I don't get a "save" command as listed below.

Any ideas?

Thanks

N2TK, Tony

Subject: RE: [ARRL-LOTW] reinstalling LOTW after crash

Art,

1) Start tQSLCert
2) Select File -> Load Certificate File
3) Select PKCS#12 (.p12) certificate file
4) At the file dialog navigate to and select the .P12 file
for your certificate (probably WB4MNK.p12)
5) enter the password you used to create the .p12 file
6) enter your private key

Now your certificate should be reinstalled.

7) Start tQSL
8) select Station -> Add Location
9) follow the normal process to enter the data for your
station location (grid square, ITUzone, Cqzone, etc.)
10) Save the location

Now you should be able to sign an ADIF normally.

73,

... Joe, K4IK

911. RE: [ARRL-LOTW] reinstalling LOTW after crash

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-01 17:51:27 UTC
From: N2TK
Topic: 881 Message: 911

Thanks for the replies and suggestions. I want to especially thank K4IK who talked me through moving LOTW from a WIN98SE pc to a WIN2000PRO pc. It works fine. Just made a submission.

Now that I have all of my recent QSO?s and recent DXPediiton logs uploaded, I have some questions on what you do with it.
- What?s the best way to check if a needed band/mode QSL is there for you?
- What do you do with this info?
- How do you get credit for DXCC?
- Is there a way to download the confirmed QSL info into a program like DXBase without having to go through every page or QSO?
- How do you handle uploading QSO?s with calls like RAEM? That was the only call that was rejected for creating the tq8 file.

Thanks again for the help
N2TK, Tony

912. RE: [ARRL-LOTW] reinstalling LOTW after crash

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-01 20:27:25 UTC
From: r b
Topic: 881 Message: 912

You might want to look into a logging program put out
by N3FJP. Costs less than $20.00, you can down loadit
from the internet and it handles the LOTW upload and
download of confirmed going as far to put sent and
confirmed into your log.

913. Re: reinstalling LOTW after crash

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-01 20:54:54 UTC
From: Dave Bernstein
Topic: 881 Message: 913

DXKeeper tracks hardcopy, eQSL, and LotW confirmation status for each logged QSO. It will automatically download LotW QSLs, match them against logged QSOs, update confirmation status, and optionally update the logged QSO with additional information provided with the LotW QSL (e.g. US county, CQ zone, ITU zone). DXKeeper also provides reports that show progress by all three forms of confirmation, as well as DXCC progress (hardcopy + LotW).

DXKeeper is free, and available via www.qsl.net/dxlab .

73,

Dave, AA6YQ

From: larry fields
Topic: 914 Message: 914

I been contemplating using the LOTW program for several days now and was wondering if I can just download all this log stuff to zip until I get next to a computer of my own to use it on.

From: FireBrick
Topic: 915 Message: 915

Not a question on LoTW primarily!

I use multiple monitors.
When I open the TQSL.exe portion (that's the screen that is used to 'sign' a log and prepare it for uploading), It always opens in the same spot on the Main Windows screen. Windows XP has a function that window positions are remembered and reopened in the last position and size that was in use when the window was closed.
The Tqslcert.exe window also exhibits this.
The LoTW main screen (which is a browser) always opens on the same screen and same size as last used. (I'm sure it's because it's a windows browser and this is normal).

I think the remembering position and size is a feature that must be programmed into the code by the authors.

Has anyone been able to get the two TQSL windows to 'remember' their last position used? Or is my computer so old it's having a senior electron moment?

You're just jealous because the voices are talking to me and not you!

Bill H. in Chicagoland

Two things are important here. First is that the program itself is in total control of where it displays itself on the screen. It can set position or it can use defaults. The default will be stored in the registry. Usually if correctly coded and the program is resizable and repositionable (as any windows program ought to be) then it will also store that in the registry. That is how how it should work. If that is done and the program retrieves the last position when opening then all should work EXCEPT, many programs do not know how to handle a negative position. Yu get negative position if the prime monitor is on the right and the secondary is on the left. If than happens and the program can't handle a negative number for position you can get really crazy results, like losing the program altogether or always coming up on the primary or many other things. I have not tried it with tqsl so do not know what they do but that is the basics.

920. Incomplete LoTW QSL Records, Worthless ???

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-03 22:04:03 UTC
From: R Johnson
Topic: 920 Message: 920

After noting several of my LoTW QSL confirmations were lacking complete "Station" info !!! I decided to download my latest "LoTW Report" and do some analysis of the situation.

I must admit that I was a bit surprised at how bad this problem was.

Of my 356 LoTW QSL's, 30% of them(108) had incomplete "Station Data" making many of the QSL's useless for Awards other than DXCC !!!

Here is a breakdown of my 108 bad QSL's:
No Grid = 22
No County = 2
No County & Grid = 1
No ITU Zone = 11
No CQ Zone = 3
No ITU & CQ Zones = 56
No Grid & BOTH Zones = 5
No Grid & ITU Zone = 8

Note: I have no means (yet) of checking for missing IOTA data.

So what is the bottom line ???

I don't know, but as far as I can see these type of statistics tend to make LoTW useless as far as being able to use LoTW QSL's for credit on awards other than the ARRL DXCC, WAS and WAC Awards !!!

The ARRL VUCC Award is questionable due to lack of grid info AND the fact the LoTW has very little acceptance by the VHF/UHF/SHF community, but that another story !!!

Use of LoTW for Non-ARRL Awards is also up for grabs. CQ Magazines Awards and County Hunters will need some of the missing data. I don't know about US Islands, Canadian Islands and IOTA awards. Awards like 10-10, SMIRK and FISTS are not even supported by providing a place to enter their #'s in the "Station" info.

I think it is up to LoTW to make sure that the "Submitted Logs" contain all of the "Station" information.

This could be accomplished in a number of ways:

1-LoTW could review (electronically) all of the currently received records and ask submitter to update his "Station" info (supply ALL info) and resign and resubmit their logs.

2-Anyone finding incomplete info on a LoTW QSL could submit a list of the offending callsigns to LoTW and LoTW could ask them resign and resubmit their logs or have them rejected.

3-LoTW could refuse to accept any NEW submissions lacking complete "Station" data. This might cause some of the current "offending" users to take notice and resign and resubmit their logs on their own.

4-LoTW could make the importance supplying ALL of the "Station" data better know in the setup instructions. I consider it a poorly documented point.

I support LoTW, but I'm starting to see it bogging down in a quagmire.

So far there are less than 6000 Hams worldwide using LoTW at this time, so I see that this is the ideal time to make changes.

I don't know. I agree with you that the statistic about missing ITU&CQ zones is dismaying, but it may be a little over-fierce to say that LotW should reject any log submissions that aren't complete to the Nth level. After all, as I understand it, any of these folks is free to re-upload any of these QSOs with the fuller information. A case can be made that in the early months of a system like this, you want to minimize rejection of submitted logs for secondary reasons, lest you turn people off. When/if CQ comes on board, part of the deal might be a strong promotional effort by ARRL to get people to insert their zone data and resubmit.

I could not agree with you more. I do think though, that it must be FORCED, if the information is not TOTALLY complete the submission should be rejected out of hand. There is NO excuse to do it any other way.
The other point about space for support of other awards is CRITICAL to the survival of LotW. I and many others will simply give up if these things are not done. It would be a shame for such a promising system.

With all of the time spent on this in design and beta it is amazing that these things were missed. Who programmed this, a cber?

Hi:
Glad to see that I'm not alone looking at the numbers.

I see no reason not to reject for lack of GRID, CQZ, or ITUZ as EVERYONE has that info.
County should be required for ALL US submissions as EVERYONE has one.

Right now LoTW will bounce an upload for errors, just make "Incomplete Station Data" an ERROR.

Now that's insulting. Did you participate in the beta or are you just an
armchair critic with 20/20 hindsight?

Nor do you account for those who don't know the difference between
CQ and ITU zones or can't even read a zone map and post zones on
a completely different continent!

>
> 3-LoTW could refuse to accept any NEW submissions lacking

I don't see how this can be enforced ... e.g., I have no IOTA
or 10-10 number (and don't care for one). How do you determine
what data is appropriate for each station and what is not?

> 4-LoTW could make the importance supplying ALL of the
> "Station" data better know in the setup instructions. I
> consider it a poorly documented point.

"User education" is always good ... but the more pressing need
is to educate those who are not using LotW about its ease of
use, etc. We need far more than 6000 registered users (some
of which are "bad accounts") worldwide for LoTw to really fly.

73,

... Joe, K4IK

This may be one of the reasons that less than 6000 hams world wide are using LoTW.
Maybe a good subject for another discussion "Why LoTW is NOT being used".

>
>
>With all of the time spent on this in design and beta it is amazing that
>these things were missed.

I didn't find LoTW very interested in getting inputs during the Beta stage where
some of these problems could have been caught.

I'd hate to see LoTW go the same way as the ill fated "QST Index Database Project"
that I participated in. Belly up !!!

> Who programmed this, a cber?

I think the documentation was done by the CB'er and the programming was done by
a No-Coder <VBG> !!!

I must admit that you have me scratching my head on this one !!!
Are you saying that ONLY US Hams have these abilities ???
I always assumed that Ham Radio was considered a "Technical" hobby and
most non-US Hams were required to pass a test of some sort.
I assume that most people would ask if they didn't know where they were
located and that this info was necessary for LoTW use.

A guy ought to know if he was on an Island or not.
As far as the 1010#, SMIRK# or FISTS#'s go, these would be optional. If you
had one you would know it.

Just because YOU wouldn't care for a 1010# doesn't mean that other Hams wouldn't
like to be able to use LoTW for 1010 Awards or that a "CW ONLY" operator who
belongs to FISTS wouldn't like to be able to use LoTW for his Awards. Same for
6M op's and SMIRK.

Before you can "educate those who are not using LotW about its ease of use", LoTW MUST be made easy to use !!! Right now it is VERY User unfriendly and is one of the major reasons that we don't see more users. Also remember that LESS than 25% of US Hams belong to the ARRL (23% and falling IIRC) so the other 75% only know about LoTW by word of mouth or some other means.

Did you check "ALL" in the fields tab when you created the adif file.

No, I have no idea what you are talking about.
There is no place to "check "ALL" in the fields tab when you created the adif file"
Maybe you are talking about some logging program ???

I logged on to LoTW, went to "Your QSO", selected "Download Report",
set "Show QSL received since:" for 01/01/2000, and checked off "Include QSL detail:"

ADIF file has ALL that LoTW has to offer.

No, I'm saying that between 10% and 20% of the confirmations I have
received through LotW have had CQ and ITU zones reversed. It is
not a US or European or South American issue ... I've seen in from
all continents.

> A guy ought to know if he was on an Island or not.

Sure, an operator would know but how do you propose to enforce a
requirement that the upload/station information include that
information ... if it is valid?

> As far as the 1010#, SMIRK# or FISTS#'s go, these would be
> optional. If you had one you would know it.

Again, how do you enforce a requirement to include the
information? How do you determine who has a number and
who doesn't?

A better solution would be to design an interface to LotW so
the various organizations (SMIRK, FISTS, etc.) could upload a
list of members/numbers and have LotW match/add the data on
download.

> Before you can "educate those who are not using LotW about
> its ease of use", LoTW MUST be made easy to use !!! Right
> now it is VERY User unfriendly and is one of the major
> reasons that we don't see more users.

The only thing user unfriendly about LotW (tQSL/tQSLCert) is
the lack of usable documentation. There is precious little
data on public/private key authentication ... about saving
and protecting keys/certificates, etc.

Several logging programs already have excellent LotW support
and that support will only improve as the writers are able to
figure out the necessary procedure calls to fully integrate
the "signing" process.

> Also remember that LESS than 25% of US Hams belong to the
> ARRL (23% and falling IIRC) so the other 75% only
> know about LoTW by word of mouth or some other means.

So? Why aren't there articles about LotW in the foreign amateur magazines? Why are there no articles about it in CQ, Worldradio, etc.? Why isn't there a "LotW Introduction" package sent to every new licensee and every local club newsletter editor?

Why are ARRL contest submissions tied to LotW (upload the log to LotW and have it automatically copied to the contest desk)? Why isn't that facility offered as a "collection point" for non-ARRL contests in order to collect the log data?

There are many ways to enhance participation and ease of use ... it just takes a commitment to do so.

73,

... Joe, K4IK

OK, JV now I understand what you are doing.

I'm bringing my LoTW report into LOGic and I've checked the LoTW ADIF downloaded file and ALL of the fields are imported into LOGic and everything matches. So I got all my data.

Bob
You may know this but one must create an adif of his QSOs
first. Then create a tq8 file using TQSL. Now you go to LoTW
and upload. The "check files/ all fields" step is done in the first
step.
JV

I'm sorry Joe, I misunderstood what you were saying about the Zones.
I remember a few people saying that they had reverse them initially, but
had corrected the error and resigned and resubmitted their logs.

I have made no attempt to check the accuracy of the Zone Data in my analysis
and only checked to see if the data was omitted from the LoTW QSL's.

For the basic information like Grid and Zones which EVERY Ham
WORLD WIDE has could force a bounce if not included in the submitted log.

Every US HAM has a State and County, again if these are not included it should
force a bounce.

Both of the bounce conditions could be handled by programing "TQSL" to not allow
a log to be "Signed" if the required data is missing.

As far as the "validity of the data goes, I would assume each of us would
have to check on his own. If I got LoTW QSL from a DL station with a CQZ of 5
it would raise a red flag for me. The next step would be to notify LoTW or the
station directly.

You don't need to enforce these. The fact that someone had gone to the trouble
of joining one of these organizations would probably mean that he would WANT to
make sure HE included the data. It is self enforcing, those that have the data
will include it, those that don't belong have no data and leave the field bank.

>
>
>A better solution would be to design an interface to LotW so

That is an EXCELLENT idea !!! It would give LoTW the flexibility of
adding new Award Sponsors without forcing everyone to update their logs.

Yes, and I feel that this is one of the reasons that LoTW has had such
poor acceptance so far. The documentation STINKS !!!

At the risk of sounding "Anti-League", I see little incentive for other organizations or publications to give the League FREE advertising for their LoTW product !!!

Remember LoTW is not a benevolent endeavor on the part of the ARRL, it is supposed to be a money maker, Just like their Publication and Awards programs.

That is something the ARRL will have to answer. Right now LoTW is strictly an ARRL thing. If and when Non-ARRL Awards are going to maybe use LoTW, the ARRL will have to deal with this type of issue.

Yes, and a receptive ear from the ARRL and LoTW people.

This list is great for bringing up and solving LoTW issues.

943. Sad Day! K4OJ SK

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-12 21:26:52 UTC
From: Tom Horton
Topic: 943 Message: 943

Folks,

It is a terribly sad day!
The following is a message from W1YL.
OJ was as N3BB said earlier today a real sparkplug.
We have all lost another friend!
Tom K5IID

Dear friends:
In September of 2002 K4OJ sat at this computer and wrote a poignant obituary honoring his father, W1CW, who had died that very morning.
On this afternoon of February 12, 2004, it is my reluctant turn to sit here and tell you that Jim did not survive yesterday's surgery. He left us about 11:30 a.m. this morning following liver failure after the somewhat risky heart valve replacement.
Just this past weekend he had a tremendous time operating the FOC Marathon and producing a splendid accounting of himself. This was just one more achievement during his lifetime of fun in and service to Amateur Radio and, in particular, the Florida Contest Group of which he was the first president. His operating abilities were manifest and he almost always the first one to volunteer his help, in spite of his declining physical abilities.
I know many of you will share my loss.

Ellen, W1YL/4 "ln"

"E" Sorter for the ARRL W5 QSL Bureau
Williamstown, WV

944. The next step?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-13 14:27:34 UTC
From: Pete Smith
Topic: 944 Message: 944

I realize everything takes time, but is it too early to ask whether ARRL is considering using the cross-check records from robot checking of logs in its contests to substantially enlarge the body of QSOs in the LotW database?

What I'm suggesting is that an interface could be designed to import all QSOs which have been confirmed by the log-checking robot, whether or not either or both parties have uploaded their logs to LotW. It might be as simple as adding a routine to the robot to produce ADIF of all cross-checked QSOs, and then allowing the robot's output to be uploaded in some sort of "super-user" mode, where the QSOs are added to the QSO records of both stations and shown as QSLed.

I'm sure there are complications -- for example, people would still have to get certificates to access their records -- but are there any show-stoppers? Wouldn't this be a big incentive to people to participate in LotW?

I wondered at first but then came up with this.

Contest Logs may be the property of the contestant who may NOT want them included in LoTW because he wants them to qsl with hardcards.

Where as if they do, they can upload them easily.
Also, contest logs are notoriously inaccurate. Although this wouldn't create false qsl's due to both parties would have to submit the same inaccurate info, which would then BE accurate.
Maybe in the future they will include an Upload option such as:
"Do you want your contest log to be included in LoTW also???"

I don't think the 'Contest Station for Rent' is an issue due to the START/END date info requirement.
But maybe there is something there I don't realize.

A contestant has the right to assume that his log won't be disclosed to his competition, but since you can only see your own QSOs in LotW, and the people you work can only see their QSOs with you which they already knew about, I don't think there is any diminution of security or violation of the submitting station's rights. If a contestant wants a paper QSL, why wouldn't he send a QSL requesting one, either via the bureau or direct with SASE?

>Where as if they do, they can upload them easily.

That's why I specified that only cross-checked QSOs would be uploaded.

>Maybe in the future they will include an Upload option such as:
>"Do you want your contest log to be included in LoTW also???"

Maybe -- but it seems over-cautious to me. Maybe CQ would want to include something like that, because I know they have a very strong position on confidentiality.

>I don't think the 'Contest Station for Rent' is an issue due to the
>START/END date info
>requirement.
>But maybe there is something there I don't realize.

That is only really an issue with regard to certificates, and in my thought process I've assumed that the robot would have a special certificate identifying it as the secure provider of the data.

GM guys

every bit of data that goes into LoTW is signed with a certificate. Contest logs sent to sponsors are not signed. They could be, I suppose, but right now they are not. And if they were signed it wouldn't be a big help for adding QSOs to the database because it would be simple enough to send the same signed log to LoTW.

Remember, when you sign your log you also attach geographic value to your log i.e., the grid square, zone, county, etc.... None of that is available with contest log submissions.

So, we can't use contest logs as they are submitted now.

I also wouldn't want to require contest logs be signed.

Yes, that's why I said if he wants a contest log which is probably in cabrillo already, submitted to LoTW, all he has to do is upload it again.

Well, I certainly agree with Dave's last point, but I'm a bit disappointed with the rest of it.

What would be the point of "Slim" submitting a contest log? Doesn't seem to me that the security risk is significant, but you could always sequester the contest-based confirmations (even your own contests) for a period of time on a trial basis and determine if there is a real-world problem. In fact, the world wouldn't even have to know that you were running such a test

I think this security thing can be overdone. Does anyone else recall when ARRL contest QSOs that were in both stations' submitted logs counted for award credit? It wasn't *that* long ago. I'm having a hard time coming up with scenarios where both parties to a DXCC counter would conspire, in an ARRL contest setting, to forge a QSO so that one or the other got credit toward DXCC. Let's face it, anyone who wants that badly to fake out the system is going to get hold of a real non-US license, modify it digitally, and submit it to get a security certificate anyway.

As for the additional geographic data, I think we have just read on this mailing list how much of that is missing from the current database. Adding a few lines to Cabrillo headers would scarcely be that onerous. In many contests, much of the needed data (State, section, zone) are inferrable anyway. Who cares if the resulting QSO record wasn't usable for all awards -- many existing records aren't either. I'm not an advocate of strictly requiring all data fields be filled before accepting a record into LotW, but shouldn't we be realistic about what is and isn't there?

And get a LotW certificate, which a great many people have not done so far.

This is something that CAN NOT and SHOULD NOT be done !!!

You would be essentially FORCING a person to participate in a program
(LoTW) in which they may have the CHOSEN NOT to participate in.

Remember a lot of people want nothing to do with LoTW !!!

>What I'm suggesting is that an interface could be designed to import all

>some sort of "super-user" mode, where the QSOs are added to the QSO records
>of both stations and shown as QSLed.

Technically this could be done. Legally I don't think it could be done.
LoTW would be stealing the logs which BELONG to the contester !!!

>I'm sure there are complications -- for example, people would still have to
>get certificates to access their records -- but are there any
>show-stoppers?

Lots of issues:
1-Contester may not want to use LoTW for QSLing !!!

2-Contester may be operating from a location other than his home location.
He requires ANOTHER certificate for that location which indicates in the
TQSL "Station Data" his Country, State, County, ITU Zone, CQ Zone, Grid
and IOTA# (if any). The Robot has no knowledge of this info and would lead
to further "Incomplete LoTW QSL Records" or worse "Incorrect LoTW QSL Records".

> Wouldn't this be a big incentive to people to participate
>in LotW?

I don't think so. It might be an incentive NOT to submit their logs to the Robot.

Frankly, Bob, you seem to be devoting a lot of time these days to beating
the drums against LotW.

Fine ... then make a part of the Cabrillo header "Submit for LotW -
yes/no." I think the "property" argument is weak anyway, because one of
the beauties of submitting your log to LotW is that it doesn't tip off
anything about your operating strategy or tactics because only you, the
contester, and the other party in a given QSO can see the QSO record.

>2-Contester may be operating from a location other than his home location.
> He requires ANOTHER certificate for that location which indicates in the

> Records".

So far as I know, all the major contests require you to submit your location as a part of your entry. I was suggesting that the log-checking robot should be the submitter, and part of the ADIF it would submit would be as much of the geographic data as was required for that contest. No special certificate would be required.

LoTW legally does NOT have the right to do this !!!

The contestant may feel that if his QSO ends up on LoTW he may NOT get
a PAPER QSL from the other station !!!

A LOTW QSL is ONLY useful for ARRL Awards at this time. A PAPER QSL
is good for ANY Award !!!

> >Where as if they do, they can upload them easily.
> >Also, contest logs are notoriously inaccurate. Although this wouldn't

> >due to both parties would have to submit the same inaccurate info, which
> >would then BE
> >accurate.

This COULD produce far more "Inaccurate LoTW QSL Records" than contest
logs would. The Robot does not know where you operated from !!!
Each operating location REQUIRES a separate certificate AND TQSL "Station
Data" indicating where QSO took place from. That is one of the reasons you
must "Sign" your log and create a ".TQ8" file for submission.

>That's why I specified that only cross-checked QSOs would be uploaded.
>
> >Maybe in the future they will include an Upload option such as:
> >"Do you want your contest log to be included in LoTW also???"

Still need to know the operating location data !!!

> >But maybe there is something there I don't realize.

Yes, where it was located !!!
The "START/END date info" is not important on a per contest basis. That data is only meant for different callsigns you may have held.

>That is only really an issue with regard to certificates, and in my thought
>process I've assumed that the robot would have a special certificate
>identifying it as the secure provider of the data.

It would need ONE for EACH operating location !!

Yes, and supply ALL of the required TQSL "Station Data" for that Certificate !!!

Contest submissions (entries) are and always have been the "property" of the sponsor of the contest. That said, I can certainly remember being able to claim DXCC credit for QSOs in the ARRL DX Contest as long as the other station submitted a log (and I was in that log). What is the difference between that and automatically copying the Cabrillo file for a contest to LotW?

I think it is a good idea ... all contest log "robots" should copy the entry file to LotW. The log could be "signed" by the robot to verify the accuracy of the data as received.

If you submit a log then it is no longer your property and ARRL or any other
contest organizer can do what they wish with them.
At least that is the usual thing when you enter any type of thing like this.

WRONG, they do not belong to the contester once they are sub. Does not it say that submission give permission, just like submitting a letter to a paper gives permission to publish it.

You have hit the nail on the head. As I said previously the legal argument does not exist and the signing by the robot takes care of the other objections.

This leaves only the unfortunate thing that some people will refuse to QSL hard copy, even if you send SASE. That is the character of the responder and you cannot do anything about that.

Sure, "Shoot the Messenger" !!!

What I'm trying to do is point out the problems that exist with LoTW
and get it back on track so it succeeds !!!

> > >What I'm suggesting is that an interface could be designed to import all

LoTW CAN'T do that, it doesn't have the INFO !!!
Dave Patton, NN1N from the LoTW staff says LoTW can't do that !!!

>I think the "property" argument is weak anyway, because one of
>the beauties of submitting your log to LotW is that it doesn't tip off
>anything about your operating strategy or tactics because only you, the

It is not about "Tipping Off" anything !!!

If someone doesn't want some of his QSO's entered into LoTW, then that is
his right.

You can't "Steal" them just because he submitted his log to a "Contest Robot".

That is NOT the way LoTW works !!! It has nothing to do with an ADIF file !!!

Please read how to setup TQSL !!!

Further more LoTW DOES require a "Special Certificate", one for each Callsign
and Station Location you use.

Please read the LoTW FAQ's !!!

Signing by the robot would defeat the entire purpose of signing logs.

Why ??? Shouldn't you want the LoTW QSL Records to be Complete and Correct ???

>What would be the point of "Slim" submitting a contest log? Doesn't seem
>to me that the security risk is significant, but you could always sequester
>the contest-based confirmations (even your own contests) for a period of
>time on a trial basis and determine if there is a real-world problem. In
>fact, the world wouldn't even have to know that you were running such a test

This is NOT a valid security issue !!!

A "Slim" can't get an "Original" LoTW Certificate (I hope). He needs a
VALID Callsign, be in the FCC Database, and reside at the address listed
there so he can get his "Snail Mail" postcard with password from LoTW

>I think this security thing can be overdone. Does anyone else recall when
>ARRL contest QSOs that were in both stations' submitted logs counted for
>award credit? It wasn't *that* long ago.

No, not in my 32 years of Hamming. When ???

As far back as I can remember DXCC ALWAYS required QSL cards, in fact some
of the "Old Time" Card Checkers wanted the cards signed or initialed to be
accepted for credit. That seems to have been relaxed now.

> I'm having a hard time coming up
>with scenarios where both parties to a DXCC counter would conspire, in an
>ARRL contest setting, to forge a QSO so that one or the other got credit

>
>As for the additional geographic data, I think we have just read on this
>mailing list how much of that is missing from the current database. Adding
>a few lines to Cabrillo headers would scarcely be that onerous.

Wrong !!!

This info MUST be in the TQSL "Station Data" for each Certificate you hold
so when "Sign" your log (create a ".TQ8") for uploading to LoTW it is correct
for the location used !!!

This has ABSOLUTELY nothing to do with Cabrillo or ADIF file headers !!!

You MUST setup your TQSL data ONCE with ALL the info. Then ANY log you
"sign" is correct for logs from that location.

Further, I personally consider a 30% rate "BAD LoTW QSL's" intolerable !!!

Did you ever check to see how many of your LoTW QSL Records are "GOOD" ???

> In many
>contests, much of the needed data (State, section, zone) are inferrable
>anyway.

ABSOLUTELY NOT !!! That is why LoTW REQUIRES "Individual Certificates" for
EACH "Callsign" OR "Location" you submit a log for/from !!!

>Who cares if the resulting QSO record wasn't usable for all awards
>-- many existing records aren't either.

I care !!!

If LoTW is going to be used even for just ARRL Awards, the data MUST be there !!!

There ARE other ARRL Awards besides DXCC, such as WAS, WAC, and VUCC that many
of us would like to use LoTW for. DXCC is not the only thing in the world !!!

If you take such a narrow view by saying "Who cares if the resulting QSO record
wasn't usable for all awards", you are dooming the concept of LoTW for ARRL Awards, never
mind any other Awards Sponsors making use of LoTW !!!

>I'm not an advocate of strictly
>requiring all data fields be filled before accepting a record into LotW,
>but shouldn't we be realistic about what is and isn't there?

No, not if LoTW is going to work. Advocating this position makes you
"Part of the Problem", not "Part of the Solution" !!!

Spare me the flames. I know that an ADIF has to be signed before it
becomes input for LotW. My point, which you ignored, was that in many case
the information is there, whether expicit or not.

As for the certificate, as I've said over and over again, the system simply
has to decide whether to trust the contest robot as thedata source. Since
in this case it would be ARRL's Contest Branch, that would not seem to be
an issue.

The robot itself has to be considered as inherently untrustworthy because it is not the source of the data, it's just a relay. In receiving logs, the robot performs zero authentication of the log's origin. So we don't have absolutely no idea what the actual source of the data. Anyone can just mail in a log for any call to the robot.

"The robot", as we have come to know it, doesn't do any cross-checking of QSOs. That work is done "off-line" by the actual log checkers. The only form of authentication is the cross-checking.

Thinking about re-establishing the old policy of trusting cross-checked contest QSOs from the log-checkers database and accepting them for awards credit, a few things have changed.

Back with handwritten logs and real postmarks, the prospect of such coordinated forgeries likely would have been viewed as being difficult and therefore unlikely. Today it is trivially easy to e-mail several forged contest logs that cross-check against each other; the aim being to falsely establish awards credit.

977. Logger32 1.2.0 synchronization

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-22 20:34:19 UTC
From: reallybogus555
Topic: 977 Message: 977

The latest logger32 *almost* synchronizes to LOTW. I got about an 80% success rate. 20% of the calls are listed 'not in log' even though they are perfect matches (as far as I can tell: date, time, band, mode, operator are exact). Logger32 implemented separate database items: LOTW-SENT and LOTW-RCVD in addition to QSL-SENT and QSL-RCVD. Was wondering how paper and LOTW QSLs would be kept separate, and that seems like as good an approach as any.

Tom,
I had no problems synchronizing Logger with LotW, the few bad QSOs went into bad.adi file. Most of them had IOTA info not correctly written (NA110 for example instead of NA-110 (no hyphen)) or grid locator info wrong (5 chars or separated by punctuation when they don't need to).
Anyway, a fast check of bad.adi brought to a fast solution (correction, file renaming & reimporting).

Date: 2004-02-26 15:08:05 UTC
From: aboushner
Topic: 983 Message: 983

Hi to the Group,

Uploaded my entire file from 1990 to present successfully, LoTW
rejected my entire PSK contacts, Saying something wrong with the mode.
I've converted my files to ADIF from DX4WIN 503.
What has to be done to modify the PSK contacts to satisfy LoTW?

Thanks for any simlified help you can offer.

73, N3NZ Noel (om)

Topic: 983 Message: 984

What flavor of PSK is the ADI file listing?
For example.
LoTW does not include every variant.
Say you log had them listed as BPSK
That's wasn't one of the accepted modes back when I uploaded.
So Using the Preferences option in TQSL (the signing portion)
I told TQSL the BPSK was PSK31

Then it accepted them all.
Same thing with saying a qso was LSB or USB
LoTW accepts SSB, it doesn't differentiate between the two forms.

So use Notepad to view the .adi file and find what flavor of digital is in you log and make the appropriate changes in the Preferences option.

Good Luck

Date: 2004-02-26 15:35:03 UTC
From: Joe Subich, K4IK
Topic: 983 Message: 985

Check the FAQ on the LotW web site. I believe ADIF (and LotW)
recognizes PSK31, PSK63, PSK125 but not a "catch all" PSK.

If DX4WIN is using PSK in its ADIF output it is not properly
compliant with the ADIF standard.

73,

986. getting PSK recognised for LoTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-26 17:59:23 UTC
From: Phil Cooper
Topic: 986 Message: 986

Hi all,

Not so sure about the ADIF standards not being followed, but there is an easy solution!
Start TQSL, then choose Preferences under FILE.
Go to the tab marked ADIF Modes, and there, you will be able to add a conversion factor for the various digital modes.
Click on ADD, and it brings up a table. Enter PSK in the ADIF MODE box at the top, and then scroll the slider down in the box below to choose what it ought to be.
This can also solve the problem of the various ways that some logging programs use to log the various modes.
For example, some use PACT for Pactor, while some use PATR.
Some only had PSK when there WAS only PSK31.

Hope that helps.....

Thank you Bill W9OL and Joe K4IK for your quick response.
Checked the DX4WIN adif file and all the contacts were listed as PSK.

Spent couple of hours this afternoon and changed all 477 QSO's to PSK31.
Uploaded the file and was accepted.

Thank you & 73, N3NZ Noel (om)

Wow, you spent a lot of needless effort on this. All you need to do is go to the TQSL program file, click on preferences under the file pulldown menu. Then on ADIF Modes tab (the middle tab) and then add. Then add BPSK in the ADIF box and select PSK31 in the list. This will add a conversion process into TQSL so that whenever it "sees" BPSK it will load it to LOTW as PSK31. I believe this is fully addressed in the help file where I learned it. I've entered several files this way and it works fine. Good luck.

Fabio:

The bad.adi file had a few IOTA problems, but also many 'not in the log' errors as well. I verified date, time, callsign, operator, mode, and band were all exactly correct in the log, but for some reason they are not found by the synchronization process. The vast majority (80%) were sucessfully found in the log, just 20% were not found in logger32's log. By looking at the logger database, I cannot understand why logger is complaining, and wonder what fields in addition to these is it trying to find a match?

I posted the problem to the logger list, but no response.

Not that big of deal !!! Might be a help to QSL Managers.
I've been sorting things out just fine with my LOGic5 logging program.

I was kind of hoping to be able to download a report of all of the QSO that I have UPLOADED to LoTW for each callsign so that I could track down why LoTW has me credited with about 50% more Q's than I have !!!

999. Need help with certificate

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-02-28 22:09:20 UTC
From: obrienaj
Topic: 999 Message: 999

I tried help here a few months ago to no avail, let me try again.

I successfully got my PC up and running with my first certificate application, it was for my old callsign , KB2EOQ. Unfortnately the one for my new call, K3UK, had the wrong dates in my application and it expired. I received a new certificate with the appropraite dates but had trouble installing it, never did get it going. I fear I zapped the certificate sent by the ARRL, I did a search today and cannot find it.

I guess I could simply request a new certificate, but what is the meaning of the "download certificate" option on the LOTW web site? When I choose that option , the file "certs.tq6" is downloaded to my PC. Am I suppose to be able to use the certs.tq6 to install my certificates?

If I click on the file I get an error indicating a "system error" that lists a path (C:/documents and settings/andy/application data/trustedQSL/keys/k3uk : no such file or directory).

After clicking "okay" a few times on the error box I am told "you have no certificate with which to sign log submissions, would you like to request a certificate now " ?

I have selected "no" and then selected the option to load a certificate. I have tried then to load the cert.tq6 file and also another file I have on my PC called K3UK.tq6, when I try to load either of them I again get the error .... C:/documents and settings/andy/application data/trustedQSL/keys/k3uk : no such file or directory

I'm stuck!

Hi Andy,
I am not sure from your explanation exactly what you have done but every one of your questions is answered in the FAQ. I would suggest that you go into the ARRL web site and download The Logbook of The World - FAQ. It explains everything that you have questions about, including the error messages.

You need the "key"! Without it you cannot do anything. I had the same problem. I am now up to W8XC (4). Each time I had a computer problem I had to get a new certificate and with it a new key. I finally called them and was told that without the key there is nothing they can do. After you get your new certificates be sure to save the key!!!

Subject: Re: [ARRL-LOTW] Need help with certificate

Hi Andy,
I am not sure from your explanation exactly what you have done but every

one of your questions is answered in the FAQ. I would suggest that you

go into the ARRL web site and download The Logbook of The World - FAQ.
It explains everything that you have questions about, including the
error messages.

Did you have the same system error? If I am missing the key, what is the purpose of the "download you certificate" option on the LOTW website?

You need the "key"! Without it you cannot do anything. I had the same problem. I am now up to W8XC (4). Each time I had a computer problem I had to get a new certificate and with it a new key. I finally called them and was told that without the key there is nothing they can do. After you get your new certificates be sure to save the key!!!

LOTW uses a public key system, which means that everyone has two keys, a public key and a private key. In such a system the public key is distributed freely but the private key is always kept secret.

In a public key system, messages can be encrypted with the private key and decrypted with the public key, or encrypted with the public key and decrypted with the private key. The keys are equivalent but different. If you have one you cannot determine the other.

When you use TQSLCERT you create both keys. You keep the private key and upload the public key to the LOTW site in the form of the certificate request. The ARRL signs your public key with their private key to form your certificate (this means they have checked it and approved it).

After that, you sign your QSLs with your private key and the ARRL site checks them with your public key (certificate). The ARRL never has your private key and so if you lose it, it's gone and you'll have to replace it.

Once you get a certificate it is told over and over and over again that you have one and only one choice for safety. That is you MUST save the certificate. IT will be in a .p12 file when you do it. You have to do it for every certificate. If you do that and keep it you can format your drive and reload it later. You have all you need. If you do not do that there is nothing whatsoever that you can do other than request another certificate, they can;t help you, I can't help you ,nobody can help you.
READ and obey, that is all I can say. It is easy but it is required.

When you request a certificate BASED on one that you have, You signed the request with your certificate) then you have the key. Without any valid certificate you are out of luck and MUST request a new one. Once you get it and install it AVE it RIGHT AWAY to a floppy is best. Then you are \safe no mater what happens.

It is all explained but I agree they don';t make it very clear. You have to read the documentation and that is a VERY bad thing in my opinion. They should force the save of the certificate. it would help a lot.

Not that big of deal !!! Might be a help to QSL Managers.
I've been sorting things out just fine with my LOGic5 logging program.

I was kind of hoping to be able to download a report of all of the QSO that I have UPLOADED to LoTW for each callsign so that I could track down why LoTW has me credited with about 50% more Q's than I have !!!

The single most common reason for the failure of large scale software systems is the tendency to write them for the ease of the developer, at the expense of the user.

IMHO, the below paragraph is a classic example of such a design.

I disagree. The largest factor in the failure of large-scale software systems is the use waterfall-like development processes that impede the discovery of high-risk issues until late in the project. Most of these failures occur before real users ever see the system.

I do agree that this application is not particularly user-friendly; automatically creating an archival copy of the certificate when it generates the certificate would be a step in the right direction. Validating CQ and ITU zones and enforcing a standard IOTA tag format would also be helpful.

I'm sure the LotW team would welcome an improved implementation, as would the user community.

We're talking about two different things. You're talking about methods, (about which, we could have an interesting discussion, but it would range far afield of this topic) and I'm talking about mindsets, (about which, of course, the classic reference is Brook's comments on second system syndrome.) And because of NIH, and the ornate mindset that had to be behind the LOTW design, I doubt very much that the LOTW team would be interested in a solution, as they've already pretty clearly dismissed the obvious one: reduce the supposed 'security' to a level appropriate for the nature of the application. public-key crypto systems, especially those developed without any infrastructure support are massive overkill for the level of security required for this application.

Sorry, I didn't mean that you should re-architect and re-implement the entire system. As your earlier note seemed to focus on the user interface, I thought you might be interested in re-implementing TQSL and/or TQSLCert to address their acknowledged shortcomings in this area.

I am of the opinion that LotW's useability can be incrementally improved to the point where most users will find it "natural". Whether or not the current complexity -- generated by the security requirements, the centralized architecture, and other design decisions -- was justified is moot, unless one is writing a case study.

Topic: 999 Message: 1014

The user interface is merely a symptom of the design failure of the underlying architecture.

If the "security requirements" led to the arcane "security" approach, then the underlying failure goes back as far as understanding the actual requirements of the system.

Any system can be incrementally modified into some other system. The question isn't "can we", the question is "should we"; and unless you're interests run to wallowing in the Turing tar pit, for the "security" architecture of LotW, the answer is a resounding no.

Sometimes, especially when it's still early days, it's better to fix the mistake than to paper over it with a UI kludge

I agree that architecturally flawed systems in general can't be papered over with better UIs. I don't believe that LotW's security requirements were inappropriate. I do think that users are unnecessarily exposed to complexity and error-prone manual procedures, but believe that this can be rectified with by adding the appropriate functionality.

It would have been entertaining to see your description of how a disk drive's head positioning system can be incrementally modified into an air traffic control system, but I think we're better off agreeing to disagree.

Today I hit 500 QSL's (out of 10,000+ QSO's). This is not bad. In comparison, I have about 600 QSL's on Eqsl and it has been in operation a lot longer. A number of DX stations have finally joined LoTW. Interestingly, there have fewer "hits" than expected from the last contest season. My premise is that many contesters use some sort of computer logging, and many submit to the contest robot, therefore it would follow that they would also submit to LoTW. Apparently this is not the case.

They'll show up. For whatever reason, there is a misunderstanding that logs can be "trolled", and that some "post contest" log cleaning can take place. For that reason, many wait until well after the log deadline to upload their logs. I usually upload mine the next day - just so I don't mess anything up 5 minutes after the contest.

From: Art RX9TX
Topic: 1019 Message: 1019

Hello ARRL-LOTW,

LoTW developers, please, is that that hard to place a note about
"standard form" of IOTA number records to let the people know they
should enter OC-100 instead of OC100, for example? That would make
LoTW syncronization much easier. Or at least you can do it by the
LoTW software when LoTW ADIF report file is being created.

I think the problem is part technical and part philosophical.

I have no idea of the technical difficulties, but it will take some effort and I would rather see the Awards program development take precedent.

The League requires Certificates for each call, this would also apply for any QSO's imported from the contest robot.
Yes, I understand that a matched QSO is a matched QSO and that should be sufficient proof. However....back to the phisophical premise....

At the end of a contest I create a Cabrillo file for the robot and an AD1F file for LoTW and import to my daily logging program. This is just a few extra steps and I do not understand why more contest stations do not do it.

I do exactly the same thing. It takes just a few moments.
I've been doing it since the beta testing started.

It's easy, even a blind wino like me can do ...correct on the first try!

Reality is a crutch for people who can't handle drugs.

If you're not importing to a daily log program, you don't
even need to create the ADIF. Just sign the Cabrillo file
with tQSL and upload the signed copy to LotW.

Of course, the next step is to require a certificate in order
to upload contest logs ... that would eliminate any question
about direct usability of robot uploads and authenticate the
contest submission at the same time <G>.

NO, NO, and NO, no need to alienate contesters.
If they can't upload to the log, they are simply not interested nor nice!
I do think that in the end ARRL MUST make this automatic in some way though.

The ARRL cannot and based on the current authentication and
security paradigm, arguably should not, automate the acceptance
of contest QSOs uploaded without a valid certificate.

Absent any security (and the contest robots have none), as it
stands it would be very easy to "fake" a QSO in any contest and
get it accepted. Since there is no current way to validate
the authenticity of a log submitted (an e-mail) all one needs
to do is e-mail a bogus log with the QSO to be matched.

I realize that but if and only if it would automate the contest robot then a certificate system could be added. I think most would use it if they were saved the trouble of 2 separate operations. Contesting produces a very large set of DX opportunities and if there is not a very large part of them found in LotW it would be another nail in the coffin of acceptability of LotW and that would be a shame. You should not REQUIRE a certificate for contest logs but should do EVERYTHING possible to strongly encourage it and that would only happen if it would mean that all contesting logs with a certificate attached would be automatically added to LotW.

OTOH, I feel only contempt for those that have a certificate and do not send the log from a contest to LotW, it is so easy to do once you are set up.

Is this really true? Following the 1970s precedent (no security then,
either), the log would have to be matched by the log of the station with
which the contact is claimed. If I wanted to claim a bogus 5V7C QSO, for
example, I'd have to get 5V7C to cooperate. I suppose you could fabricate
an entire DX station to claim a QSO with, and submit contest logs for both
your own station and the DX, but wouldn't that pretty quickly become evident?

Considering that most (all?) of the big frauds of the 60's through 90's
involved real QSOs from fraudulent locations, how big a problem would
giving credit for "matched" contest QSOs really be? I expect a cry of pain
from the ARRL on this, but it just doesn't wash for me.

I would agree that the ARRL Contest Robot should be modified
to accept "signed" Cabrillo files and automatically copy them
to the LotW server. I would further like to see a system
where other robots (KKN, etc.) also copy signed logs to the
LotW Server.

> OTOH, I feel only contempt for those that have a certificate
> and do not send the log from a contest to LotW, it is so easy

I would go one step further ... contest log submissions should
not be accepted and DXCC accreditation of any station (including
DX-pedition) should be withheld for any station/operation (where
the licensee, guest operator, or ANY operator of a multi-operator
station/DX-pedition) holds or has ever held a LotW certificate.

If an operator expects to participate in the benefits of LotW,
he/she should be expected carry his share of the "load."

I agree with you completely. The only problem is that ARRL would have to admit the obvious. The onerous security for LotW is totally unneeded. I know this is heresy but nevertheless it is true.
Anyone that fabricates would soon me exposed and become a pariah, so what does it matter? Nevertheless, I think we are stuck with this system. I don't expect change sop somehow it must be eased?

It is a matter of degree. With the paper logs of the 70's it would take a very determined individual to falsify one or more contra station submissions. With computers and electronic submission it is really a simple matter to "create" any number of bogus logs.

There will always be someone who will try to "game" the system. The big frauds of the past were uncovered and many of the credits reversed. The hallmark of the ARRL awards program has been the honesty of the participants (mostly)enforced by vigilance at the League. With all the work that needs to be done on LoTW, this is really a minor issue. I find it difficult to believe that anyone who goes to the trouble and expense of mounting a major contest effort is now too stupid or lazy to make two log submissions.

Jim

Is this really true? Following the 1970s precedent (no security then, either), the log would have to be matched by the log of the station with which the contact is claimed. I agree with you, of course, but 3/4 of the individuals participating in a major contest are not mounting major efforts, and it would add very considerably to the number of confirmed QSOs available for award credit through LOTW if some way could be found to include matched contest QSOs.

Wait until the last day and upload a "log" with the DX station's call. It will overwrite the older logs ... if there is no human checking the QSOs will match and !!! credit !!!

Yes, it's a stretch but entirely possible with no active security and/or error checking. The system currently relies on the certificate to authenticate the QSO and the uploader ...

Yes, but I submit that it would be very easy to catch someone who did this more than once or twice at most. He could either fabricate logs from real licensees, and risk being exposed when one of them notices a QSO he didn't make, or make up call-signs, and get busted even more quickly.

I submit that this is really like most low-intensity law-enforcement situations. Take speeding for example -- properly-set speed limits will generate about 75 percent compliance with no enforcement at all. Minimal police presence occasionally will raise it above 85 percent. Serious policing, together with stiff penalties for violation (banning from the DXCC program for 5 years?), can achieve better rates. Eventually, though, perfect compliance requires infinite enforcement effort.

The question is where on the curve it is reasonable for LotW to be.

A VERY neat and actually quite mathematical explanation and the need to be
at the infinite point where LotW is attempting is silly.
Nevertheless the NIH and other syndromes are going to preclude any
reasonable change it seems to me.

After reading the these comments it only me wonder more about the future of LoTW.

The last I knew it was a "Free Country" and people had the "Right of Choice" !!!
I thought Joe Stalin was dead and buried, I can see the smile on his face now !!!

Comments like these will only serve to alienate the Contest Community and reduce
their participation in LoTW and possibly "Log Submission".

There are many options open for the "Contester" to QLS: LoTW, BURO, eQSL, or not
bothering at all. It's THERE choice !!!

At this point in time the only awards that LoTW appears to be addressing are the
ARRL sponsored awards. There are "Other Awards" in the world !!!

Remember the fact that a "Paper QSL" is UNIVERSAL, a "LoTW QSL" will be limited, and
an "eQSL QSL" is worthless (my opinion).

Another point, right now LoTW lacks the numbers. Currently there are only 6,640
LoTW users World Wide !!!

By the ARRL's own figures only approximately 23% of the U.S. Hams are League Members
and that number is falling.

A recent ARRL Web Survey on LoTW showed: 15.8% used , 19.4% maybe, 23.6% don't use,
35.5% don't keep "Electronic Logs", and 5.8% don't what LoTW is.

While these numbers are subject to debate, they do show a need to increase LoTW use
VOLUNTARILY, not by edict !!!

LoTW Zealots need not apply !!!

and that number is falling.

A recent ARRL Web Survey on LoTW showed: 15.8% used , 19.4% maybe, 23.6% don't use,
35.5% don't keep "Electronic Logs", and 5.8% don't what LoTW is.

While these numbers are subject to debate, they do show a need to increase LoTW use
VOLUNTARILY, not by edict !!!

LoTW Zealots need not apply !!!

1036. March 12 update

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-03-12 21:03:36 UTC
From: Patton, David NN1N
Topic: 1036 Message: 1036

Hello all

Thanks for patiently waiting for news on the Awards Section of LoTW.

I am happy to report that progress is being made. We have decided to go a little farther than planned for the inital Awards activity for DXCC.

When we turn the DXCC support on, not only will it be able to automatically show you the confirmations for each country on each band that you have in the system, it will also be able to show you your entire universe of DXCC records as maintained in the DXCC program--incorporated into LoTW.

Each user will have to request that their associated DX records be merged into LoTW--we will not be doing this automatically. These requests will be made via the Usersite. After this is done, you will be able to tell LoTW which of your calls you want under a single DXCC. E.g., I want my old call's confirmations (NT1N) to be combined with those for NN1N. Under DXCC rules all QSOs made from the same entity, by the same operator who has had other calls, may be combined. Club callsigns in the US cannot be combined in with primary calls for DXCC.

The system will check to make sure that combined calls fit the rules-- where possible.

I am not able to assign a date to when we will activate this function, but I can tell you that I have seen it, and it is GOOD! :-) Our small shop is juggling multiple tasks, so please bear with us. We are going to attack each award one by one and eventually we will have enough built that adding support for each award will get easier and easier.

Some of you have noticed that the column reporting Date of QSL has disappeared from the Usersite. That was done to make room for the Awards displays. The data is still available for each QSO, but just not displayed en masse. If we can find a way to easily put that back we will, but for the most part it is irrelevant.

The effort to notify everyone about the importance of back-up certificates was worth it. But, over the last week the number of "I lost my hard drive" and "somehow upgrading my OS crashed my system" issues have become commonplace again. If you haven't backed-up your certificates, please do so.

73, Dave, NN1N

It will be important for this information to be included in downloaded QSOs so that logging applications can appropriately present it to users. I suggest that a confirmed QSO validated by the ARRL be indicated in a downloaded QSL by a QSL_RCVD status of 'V'. A QSO that doesn't "count" should be indicated by a QSL_RCVD status of 'I'.

Looking ahead one step further, it would be useful to define an electronic submission form by which users (or their logging applications) can "submit" QSOs for award credit. A set of ADIF records preceeded by an appropriately-tagged header seems like a simple, consistent way to accomplish this.

1045. TQ5 file

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-03-17 20:38:19 UTC
From: Julio Peralta
Topic: 1045 Message: 1045

I was trying to help a friend with his application to LoTH. Since I haven't done it in a while I have a question.

After you complete the process and the wizard asks/or advises you to upload the .TQ5 file, is there still a copy of that file in your directory on your hard drive?

After my friend closed the wizard we checked his drive and there was no .TQ5 file there. I'm thinking a copy is sent rather than the original file.

BTW I was not physically present at his QTH while we were doing this. I was advising him long distance.

At the end of the process of generating the certificate request,
tQSL Cert will raise a file dialog ("Save Request") asking to
save the file as "type .tq5." Where did your friend save the
file?

If he can't remember try using the Windows search tool ...

Start -> Search -> for files or folders

In the "search for file or folders named:" box enter: *.tq5

In the "Look in:" box: select "Local Harddrives"

Click on "Search Now"

a list of *.tq5 files on the system should be shown in the
search results box ... note its location ("In Folder") so
you can return to it when you next attempt to upload it!

73,

... Joe, K4IK

1047. QSL Dates and Sorting - Broken ???

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-03-17 22:12:11 UTC
From: R Johnson
Topic: 1047 Message: 1047

Hi:

When I log on to LoTW it says at the top of the page:
"Most recent QSO record received 2004-02-18 23:02:31Z"

When I click on "Most recent QSls" and check the details on each QSL I find
that I have received 16 QSLs since the above date and most of them in March !!!
The most recent QSL is dated today 3/17/04 !!!

When I try to use the "Sort by" (QSO Date, QSL Date, Reciept Date or Call Sign)
it always shows the QSO Date !!!

I would tend to think if a LoTW User submits a "Sort by" (QSL Date), that they
expect to see a chronological list of their QSOs showing the QSL Date instead
of the QSO Date.

Is the "QSL Date" sort feature broken ???

73

This is the date and time of your last submission to LoTW.

> When I click on "Most recent QSls" and check the details on each QSL I find
> that I have received 16 QSLs since the above date and most of them in
> March !!!
> The most recent QSL is dated today 3/17/04 !!!

These have come in since your last submission.

> When I try to use the "Sort by" (QSO Date, QSL Date, Reciept Date or
> Call Sign)
> it always shows the QSO Date !!!

It does show the QSO date but it is sorted on the QSL date and that date
is the date it was QSLed in the LoTW system. They are sorted from oldest
to youngest and you can only view that date by looking at the details
for each call sign.

> I would tend to think if a LoTW User submits a "Sort by" (QSL Date),
> that they
> expect to see a chronological list of their QSOs showing the QSL Date

Well right now the "Most Recent QSLs" query is showing my all my QSOs,
even unconfirmed. I've seen this happen before too.

Attachments: 1 described; binary payloads are missing from this source WARC

You need to create a certificate request for KC2SEV and upload it to the ARRW/LOTW. They will then send you a certificate for that call, if you do it today you should get it by Monday. When you get in, and install it, you will then be able to create a LOTW compatible file for uploading.

Once you're registered with your "primary" callsign (AB8NI), it's easy. Use TQSLCert to make a new certificate request. Fill out all the info, then upload that certificate request to LoTW. In a few hours, you should get the new certificate e-mailed to you. (Going off the top of my head, since it's been a while since I needed to do that myself!)

Ron

All you need to do is apply for a second certificate using you AB8NI certificate to sign the request for the KC8SEV call. Make sure you get the dates right!

You can do that by opening the TQSLCert program clicking on FILE on the top tool bar.Then click on NEW CERTIFICATE REQUEST and follow the on screen instructions.

I uploaded about 10,000 Qso's yesterday to LotW and had one "bounce."

Does any one remember XEFJTW in 1986? There was some issue about the call at the time. I don't remember the details. Anyway, LotW didn't like it. (I doesn't really matter to me--but it did bring back old memories!) I am just curious, does anyone remember this station or the circumstances?

Well Bill, I will have to pull out my logs and check - I started uploading
from 1977 - but still have to put the logs in for the sixties when I signed
W7ZQV/KG6 from Guam. Also have the logs from the start - 1955, but
figure most of all that I worked back then have either changed their
calls or have when to their ham shack in the sky.
73,
Joe W7LPF
BTW - I hank poked in my W7LPF/DU2 logs - all 26+K of them!!

gotten a LoTW QSL for my WN9VOL
callsign as yet.
I know that there weren't many computerized logs
for a 1967 qso.

But if you have your old logs, I'd get a kick out
of seeing if anyone has me in there log.

You can never tell which way the train went by looking at the track.

Well W7LPF did get a SS qso in my LoTW log. But alas that was the only one.
50K qso's.

1,771 lotw qsls, and a total mixed of 131 countries.

So, if there was such a thing as a LoTW DXCC, I'd have it.

In that bunch, were approx. 15 band/mode qsl's I'd been stymied
on getting a hardcard for.
Hopefully the Awards feature will be implemented soon.
They will give me a minor jump in my Challenge numbers.

Hi Dave

XEFJTW was operated by Bruce, AA5B, for about 600 QSOs before he gave up in frustration.

The call was the result of a bureacratic typo on the license issued.

73, Dave, NN1N

Hi Dave:
Humm, that's an interesting scenario !!!

Will any of Bruce's QSO's using XEFJTW count for LoTW/DXCC credit ???

Just wondering if a legally issued "Non-Valid" (Legal Mistake) Callsign can
be recognized for DXCC ?

If so, can LoTW be programmed to accept it ???

1065. Straightening out old logs

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-03-24 19:52:18 UTC
From: Don Inbody AD0K
Topic: 1065 Message: 1065

Interesting problem here. I am in the Navy and have operated from multiple QTHs over the years, some of them maritime mobile. Going over my logs and entering old log data into my program (DXKeeper) has been a real drill. I am sure I have many mistakes, including uploading data to LotW as though I was operating from my present QTH. I now realize that many of the older QSOs should have been uploaded using a different certificate with a different QTH attached.

Is that correct? Is there a way to correct what I have uploaded, as I do not want anyone to think I am trying to sneak in invalid QSOs for some award.

Don/AD0K

1066. Maritime Mobile

Topic: 1066 Message: 1066

Another question related to my logs:

When I was operating maritime mobile, I signed AD0K/R3 (I was in the South China Sea and Java Sea at the time). When I got the QSL cards for that, they came in with my callsign variously reported as AD0K, AD0K/R3, AD0K/MM3, and AD0K/MM. If I upload my LotW data from AD0K/R3, and if the other station is logging me as one of the others, am I correct that the QSO will be busted?

Fix the log and send again. You will have some wrong but they will not match anything so you will not have a problem of sneaking in. Remember, both ends must match.
That said I think it is a HUGE error not to let anyone delete any qso. For instance, they do not check carefully and I have several in the log twice, same time, same date etc and it screws up my log so that LotW says I have 291 QSLes but I really have only 287!
This stinks!

Sadly you are correct. You must have a certificate for each call. This is another of the design problems with LotW in my opinion. It is a real PITA for those with many call signs.

As a manager I have a few callsigns. 10 plus my current and 2 past calls.
It's NOT that big a deal.

In fact, I see it as a plus, I can't screw up and upload the wrong log to a call.
A couple times I clicked on the wrong 'Station Location' when signing a log.
And it told me right away that I'd made a mistake.

The software could still do that without requiring a different certificate
for each one.

I am not sure what the ARRL propose in their forthcoming awards section for LOTW, but it might encourage more users for LOTW, if there was a more progressive awards system. What about an intermediate level award for say 50 confirmed countries? This might even increase income for the ARRL!

I have been somewhat disappointed at the slow take up of the LOTW system, for stations outside the US and Canada. My current return rate is around 6%, but a fair proportion of those are for North American stations. Personally I have found the LOTW system works very well and seems to be the answer to confirming contacts for award purposes.

You guys are doing much better than me, my return rate is 2.3%.

It, unfortunately, will be years before this system becomes viable; however, I am doing my part and I will continue to upload my QSO's.

I found the system extremely easy to use from its inception and with a logging program like PDA's LOGic 7, it is now automatic.

That's been a discussion here for quite a while.
But I don't see any intermediate awards such as 50 confirmed countries.
Almost any weekend, you can get 50 countries, even qrp.

I have over 150 different countries on LoTW, just from my old logs.
I'm seeing more and more non USA.
A lot of the contest stations are now uploading.
That takes the 'qsl' burden off of them.
I've uploaded ALL the logs for the stations I manage.
Those callsigns have LOTS of LoTW qsls. hihi

Plus, don't know the cost breakdown, but I'm betting, that Awards certificates, plaques,
and the subsequent checking and paper work are money losers for all the Awards issuers.

LoTW will lessen that loss, hopefully.

It may not be as bad as it looks. I did a bit of additional analysis, and if I only look at the QSOs I have entered since the first of this year, I am running 20% return rate. Many of my older QSOs are not QSLd, but that is to be expected.

What I find funny is that my old call, pre 1996, has far more of a percentage of LoTW qsls being non USA.
Most are dxpeditions and non USA contest operations.

While I only have a few dozen pre 1996 lotw qsos confirmed via LoTW, only 5 are stateside calls.

My oldest LoTW qsl is for 1971.
Guess I wasn't the only person to put my logs on computer when it first became possible.

A balanced diet is a cookie in each hand.

Topic: 1077 Message: 1078

I built a DX QSL's received only database in 1973. The database was later incorporated into my daily logging program and uploaded into LoTW. Through the 80's and 90's I only logged contest QSO's (with CT) These were also incorporated into my daily logging program (Logic). I did not begin to use a daily logging program until 1996.

My first DX QSL "hit" is dated 1986. Most of the QSL's are from 1995 and later.

Here's just a little whine. If the ARRL is going to put "coming soon" on the awards page, what does that mean? How soon is "soon"? To me, "soon" is less than a month. Is "soon" a year? Is "soon" five years - what does "soon" mean? Instead of saying "soon" how about saying "we expect to have it up within a year" so I know what to expect. "Soon" is not being used correctly. The system went live in September and now it is March - "soon" passed a long time ago. Hope to talk with all of you soon! :-)

I have 3 logs in the system, but they're really only for two station locations.

My current call and the one before that has a return percentage of a little over 23 percent; mainly USA stations, but DX is going up slowly. All these QSOs were made between December 2000 and today.

The third log, for QSOs made from within Belgium (ON4CBJ) in between April 1996 and April 2000 doesn't even have a return rate of 1 (one) %. The majority of those QSOs were with European stations, yet the confirmed ones are mostly from the USA.

Obviously the ARRL needs to do some more promoting overseas; but I believe the number one reason for the "lack of participation" is that many people are still working very hard on transferring their paper log to computer. I haven't had to do any of that, but I'm sure that for some it's a huge task.

I haven't reached DXCC on the LoTW yet, but my WAS statistics got a real nice boost!

With a bit of patience I'm sure we'll get there.

I agree with you Chris.
ZC4TS uploads on a regular basis, as we all should if we are going to make this work.
I do it myself every few days or after three or four contacts.
With LOGic 7 it is, of course, child's play.

1088. Excel Spreadsheet to Create ADIF Log Files

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-04-09 03:52:11 UTC
From: Clark Stewart
Topic: 1088 Message: 1088

I have recently completed an Excel spreadsheet to allow paper logs to be put into ADIF format for easy uploading to LoTW or for importing into regular logging programs. There are similar programs around but my focus was to make this as fast as possible.

After the first QSO is entered, the spreadsheet will automatically enter the same Date, Band and Mode for the next QSO so you don't have to type that for each QSO. It will auto-complete the Time field so you can type "1" and it will log "0001".

Since only the Band is important for LoTW, you need only type in the whole number of the frequency (e.g. "28" instead of "28.562"). And, you can just type in a "c" or "s" for CW or SSB or a "1" or "3" for A1a or A3a Modes. Or, you can type in any Mode that is accepted by LoTW.

Using this program I can enter paper logs six to eight times faster than by using a regular logging program. Especially when you make several contacts on the same Date, Band and Mode the entries go very fast.

Once you have entered the data the program will create an ADIF file that you can immediately upload to LoTW or import into a logging program. Or, you can combine it with other ADIF files in a word processor and upload the combined file all at once.

I have posted a description of this program on my web site along with a ZIP file containing the spreadsheet program and a Microsoft Word document with the full instructions. Basic instructions are in the spreadsheet as well.

Here is the link:

http://www.w8tn.com/software.htm

If you find this program useful I would appreciate hearing about it. Otherwise, there is no charge, it is Freeware.

If I were them, this is exactly what I would be doing. Let the folks who want QSLs sooner ship them green stamps, and then take care of the rest of us. I suspect from their D68 experience they can judge pretty well when the flow of donations that exceeds break-even will taper down sufficiently so that it makes sense to go on LOTW.

Has anyone heard how the ARRL's testing of the Award module is going?

Maybe I am just too inpatient, but has anyone any idea when the award section will become available? If the ARRL is so certain that the QSO Matching rules are 100% secure, then it couldn't be that hard to make some funtion to count the QSL and DXCC entities or US States ? And that's a programmers point of view. 15th of February was the last date I heard through the rumours. Maybe they meant the year 2017. Or as said before, maybe I'm just inpatient.

Ben, and others

I too am hopeful they will roll something out in my lifetime. For the most part, I have been using the 'download ADIF' function with good success. I can capture 100% of the confirms to date (about 11% of my 20,000 Qs) using the ADIF function and simply load it into a new file in my log. The local log then does the analysis for me. What I cannot capture using this method is the "worked/confirmed" info as the ADIF only contains "confirmed." I wouldn't be surprized if the local log may eventually be preferred to the on-line analysis they develop. Pure speculation on my part.

Counting the DXCC entries is one thing, but the facilities to apply for
the awards etc are a lot more work.

Have not seen much about it, but Wayne Mills of the ARRL announced at the Visalia DX Convention that effective Monday, May 3rd, Logbook of the World will open its award link to your DXCC records. You will be able to see all your entity credits, it will tell you what in LOTW you need and you can request credits. Also Wayne said LOTW will be available for use by other organizations and said there has been contact on this with RSGB and CQ.

That the earliest qso confirmed by LoTW was 1971.
And I see very few earlier than 1990.

I guess there are a lot of people who have not transcribed their old logs onto computer.
or
maybe I just outlived them?????

I'd suspect that readers of this newsgroup probably have put their logs onto computer.

What do you mean my Birth Certificate expired?

Subject: [ARRL-LOTW] I'm still surprised

That the earliest qso confirmed by LoTW was 1971.
And I see very few earlier than 1990.

I guess there are a lot of people who have not transcribed their old logs onto computer.
or
maybe I just outlived them?????

I'd suspect that readers of this newsgroup probably have put their logs onto computer.

What do you mean my Birth Certificate expired?

My earliest QSL is 1986, with most of the QSL's in the late 90's.
I have no intention of transcribing my logs from the 60's and 70's. Most of these people are either gone or have changed their callsigns.

your probably right Jim.
I put my logs on computer early and just kept them up.
I wonder if someone ever did an analysis of the turnover rate of hams?
Like how many years did someone stay active.
There's old farts like me and I'm betting the average age is getting older.

I know a lot of the guys who Elmered me when I was starting are gone now.

I put the logs I inherited from W4FRU onto LoTW, they were late 80's.
Just for posterity sake.

In my case, the earliest log you'll find at LOTW is 1991, which is when I started my first computer log. No way I'm going to move 30 years worth of pre-1991 'paper' QSO's onto the computer, to get perhaps 25 more 'hits' on LOTW!

I started using computer logging for contesting in 1991. My LoTW QSL's show that ... all but one "QSL" is from 1991 and later.

The only QSO's that I have in my computer prior to 1991, are my CW DXCC confirmations. The one QSL prior to 1991, is a DXCC confirmation from 1978 (I was licensed in 1976). (Don't intend to go back to enter all my paper logs into the computer!)

By the way ... uploaded 46 Florida QSO Party logs from this past weekend a couple days ago.

Uploaded 23 (one from each county we operated in) as just NJ4M, and then uploaded them a second time as NJ4M/xxx (xxx is the 3 letter county abbreviation we signed while mobile). I've gotten confirmations both ways. Haven't done any as /M, but I'm sure there are some waiting for that one. Maybe when I get time, I'll upload them that way as well ... just to make sure we cover all possibilities.

I did not get it, if I use LoTW I'll pay 15-25 cents for each applied
QSO and additional 15 cents for every QSO over 120?

I don't think it was written very clearly. I believe that the intention was to compare the cost using LOTW with the cost using paper QSL cards. If I'm right, then the 15-25 cents per credit under LOTW compares with 15 cents per paper QSL card (over the first 120), and is *not* in addition to it. Hopefully there will be some further clarification when the system becomes active on Monday.

Official, according to the ARRL Letter this
week. <http://www.arrl.org/arrlletter/04/0430/>. I mis-stated the date,
though -- it's Wednesday, May 5.

From: Pawel SP7PS
Topic: 1110 Message: 1110

Hello Friends,
I have just found the following information on the LoTW Web Page:

"The Logbook of the World Web site will be off-line starting Monday night,
May 3, approximately 2000 EDST (0000Z May 4), until some time Wednesday
morning, May 5 (~1600Z).
The LoTW Web site will be off-line in order to update the system with new
software necessary to support the DXCC award............."

As you see, the award possibility is comming. Great!

While LoTW is down for the DCXX Software Update I thought I would take advantage of this down time and see where I stand on my Awards.

I use LOGic as my logging program, so it was easy to check my status.

Yesterday afternoon I downloaded my (detailed) report from LoTW and imported the ADIF file into a blank copy LOGic and ran the "Awards Update" program.

Here are the results of "Raw Data" from my 411 LoTW QSL's (All Bands):
116 - US Counties
4 - Continents
14 - CQ Zones
27 - DXCC Countries
12 - IOTA Entities
19 - ITU Zones
40 - US States
4 - VE Provinces

It was interesting to note that 119 (29%) of my 411 LoTW QSL's contained incomplete "Station Data" when they initially setup their TQSL.

They failed to include either one or more of the following:
Grid, ITU Zone, CQ Zone, or County. I have no way to check for missing IOTA data as not everyone qualifies for IOTA.

I have no idea what my actual Award Stats would be had everyone setup TQSL properly as many of the missing zones, grids, etc. would be duplicates.

Funny you mention this.
Because just over the weekend I checked my 4k plus LoTW Qsls.
Over 1400 had some instance of incorrect data.
Usually misspelled counties, incorrect ITU zones.
Seems that because when you are entering your data for your original certificate, LoTW asks for ITU zone first and CQ Zone second.
I'm pretty sure that was the way it was.
I'm betting that a lot of people may have missed that and put them in CQ then ITU.

I'm not counting zone discrepancies where a W1 is now living in California etc.

I hope people will check their data and 'Renew' their certificates with the correct info.

Hi Art. I had a long e-mail exchange with the folks at the ARRL concerning the fees. This is what I think I understood them to say. There were some contradictions in the messages they sent me so I'm not sure this is 100% right.

The ARRL looks at DXCC and LogBook as two completely different entities.

DXCC is an entity that has its own fee structure, which for all intents and purposes has not changed.
Those fees are:
1.) First submission - Application fee $10.00 and .15 cents for each QSO over the 120 max allowed.
2.) Subsequent submissions ☐ Application fee $10.00, Surcharge $10 and .15 cents for each QSO over the 100 max allowed.

LogBook is a new entity with its own fee structure. It is an entirely new revenue stream for the ARRL. If you want to use it, it will cost you .15 cents to .25 cents per LoTW credit.

Example:
Lets say you have 200 LoTW credits that you would like to claim. The

cost to you would be .15 to .25 cents per credit. (It can vary because you are allowed to buy credits in advance of having actual confirmations). Lets just say in this case .25 cents a credit. That would put the cost to you at $50.00 for the LoTW credits. You are now done dealing with the LoTW entity.

Now lets say this is your first submission of the calendar year of any kind to the DXCC entity. And, Lets say that you want to submit 200 QSOs. They could be paper QSLs or LoTW credits the DXCC entity does not care which it is. The cost to you would be a $10.00 Application fee plus .15 cents for each QSO/Credit over the 120 max allowed. (80 * .15 = $12.00). That would put the cost to you at $22.00 for claiming 200 DXCC QSOs/Credits. You are now done dealing with the DXCC entity.

Now lets say this was a subsequent submission to the DXCC entity and, that you want to submit 200 QSO's. The cost to you would be a $10.00 Application fee plus a $10.00 Surcharge plus .15 cents for every QSO/Credit over the 100 max allowed. (100 * .15 = $15.00). That would put the cost to you at $35.00 for claiming 200 DXCC QSOs/Credits. You are now done dealing with the DXCC entity.

Note: According to the ARRL ☐ "For a limited time, you may make a second (or subsequent) application in the same year with no $10 surcharge".

First Submission total cost to you for claiming 200 LoTW credits and electing to use them in one submission to DXCC would be $72.00. ($22.00 DXCC + $50.00 LoTW)

Subsequent submission total cost to you for claiming 200 LoTW credits and electing to use them in one submission to DXCC would be $85.00. ($35.00 DXCC + $50.00 LoTW)

According to the ARRL : "Logbook is an alternative to spending postage collecting cards. It is not intended as an alternative to submitting paper cards, although it can be used in that way."

The big benefit provided by LoTW is less money spent acquiring QSLs. This is a great deal for newer Hams that have not collected many paper QSLs yet. They stand to save a bundle on postage and printing cards. Older more established Hams that already have a lot of paper QSLs in hand would do better to just submit them the old fashion way. The only real LoTW benefit for the Older Ham is if they are just starting out on the DXCC chase, or they happen to have cards that they would rather not risk via Post/UPS. If a Ham is looking at LogBook as an alternative to risking submission of his cards via Post/UPS he should be prepared to pay the LogBook fees.

IF one can believe Wayne Mills, there will be a discount to the
DXCC fees for credits from LotW. Here is an e-mail exchange I
had with him very early in the process.

I hope they're not backing away from that now ... after being told
that I will have to pay the current PER QSO rate to get over 1000
QSOs from my old awards (CW/Phone/Mixed/5BDXCC/160 DXCC) converted
and credited in the new record format because I've been inactive
since BC (before computerization). With 1800+/- band/entities
depending on card and LotW returns in the next couple of months,
the 1000 old credits represent a substantial part of "getting
current." I was looking forward using LotW credits, where possible,
as one way to minimize "bite."

If ARRL are planning to charge on both ends, LotW and the entire
DXCC program are in for a very quick and PAINFUL death.

73,

In a couple of hours, these questions will be answered.
But for those who can't wait....I'll try.
(boy I hope I'm right, my memory isn't as good as it never was)

First off.
I was one of the beta testers. Yes there is a sliding fee scale for the number of LoTW country credits you are submitting.
I 'THINK' you get the same "1 free submission" a year which includes up to 120 qsls.
I 'DON'T THINK' the DXCC differentiates between a hard card or LoTW submission in this regard.
I don't have my notes available so I'm NOT carving this in stone.

Second
If you already have submitted to DXCC and have an account which contains records of qsls submitted, you don't HAVE to do anything with these.
LoTW knows what they are and you should be able to see them listed.
Very early submissions may not have info such as band or mode.
The records from long ago only contained the Call, Date, Time, and whether it was credited as Mixed or SSB. As DXCC improved it's software that info was recorded.
Later submission recorded the other information.

Third
While testing, there was the provision to purchase a number of credits before hand.
I can't remember the exact increments but the large increments were definitely sufficient.
I bought 100 using my credit card on a 'Secure' system.
I still had 70 left the last time I looked.

From that, you can do the math and see I had approx. 30 LoTW qsl's that I had not been able to get qsls for.
Hence my Challenge total just got a nice jump at a minimal expense.

Hi Jim:
I'm not sure if they don't know their county, if they didn't see the
entry window on TQSL, or they figured it didn't matter for DXCC.

Just for the fun of it I counted the number of stations who didn't
know where they at, Hi. Some of these have multiple QSO's with me so
I didn't count the dupes.

6 - County missing
29 - Grid missing
30 - ITU Zone missing
15 - CQ Zone missing

BTW: I wonder if they bothered to look themselves up on WWW.QRZ.COM or
on a CD Callbook Hi.

1600Z, time for LoTW to come back on.

What do you mean by "free" in here? "Free" is free of any charge or
"free" is 0 cents for first 120 QSOs plus 15-25 cents per QSO, while
"not free" is 15 cents for every QSO over 120 and 15-25 cents for
every QSO?

Looks like we should expect pricing of 30-40 cents total per QSO.

I've seen the LotW fee schedule and don't have a problem with it.
My problem is with the DXCC side if ARRL/DXCC is charging the same
for "hard copy" QSO confirmations as "electronic" confirmations.
Wayne's e-mail indicated a substantial discount to the per QSO rate
since "we have to hire less labor to enter the data, and we will
pass the savings on." In fact, the system is (or could be)
completely automated which means NO LABOR to handle electronic
confirmations.

> If you already have submitted to DXCC and have an account
> which contains records of qsls submitted, you don't HAVE
> to do anything with these.

But I will ... my records were never converted to the computer.
If I want credit for the 1000 or so QSOs, Wayne is insisting
that I have to submit the cards de novo and pay the $0.15 per
card beyond the 120 card limit. Since 95% of the cards are
more than 10 years old, they have to be sent to Newington, I
can't even deal with a local card checker.

> LoTW knows what they are and you should be able to see them

> Later submission recorded the other information.

I would not have a problem shipping them the old cards if they
wanted to verify band to "complete" the records. All I would
need is a list of calls credited for CW/Phone/Mixed and calls
credited on each band for 5BDXCC/160 ... I have all of the cards
I've submitted (and new ones I plan to submit "some day") filed
by band. Frankly though, if I have to pay $0.15 per QSO for
600 QSOs (5BDXCC plus 160 DXCC) as well as 500 plus QSOs from
the basic CW/Phone/Mixed awards (they are/were separate), I
might as well apply for the awards all over and have all the
plaques/certificates issued with my current call. That's what
I mean about "paying all over."

BD> First Submission total cost to you for claiming 200 LoTW credits and

BD> Subsequent submission total cost to you for claiming 200 LoTW credits

VERY and TOO complicated. And the target is that no one can finally clarify for himself the whole pricing sceme :) That is similar to cellular phone companies pricing schemes, they offer you limited discounts etc which you can not keep in mind, but never say they just decrease a price of a minute. Why ARRL would not just say that EVERY QSO costs 15 cents? First submission in a calendar year costs me, not an ARRL member, 20 dollars. And I can check 120 QSO for free. 120 x 0.15 = 18 dollars. They just steal my 2 dollars on that 120 "free" cards :))

I know, I know, I am "free" not to participate in it :)

Thanks for the note back Art.

Like I said before there was some contradiction in the e-mails I got from the ARRL. It sounds like they are not sure if the .15-cent per QSO beyond the 120 QSO/Credit max will be imposed on LoTW credits. I think their confusion here is what to do about an application that includes both paper QSLs and LoTW credits. If you go over the 120 QSO/Credit max how should it be charged. Did the paper QSLs put you over the 120 max limit or did the LoTW credits put you over 120 max limit.

At any rate it is obvious to me that if you have a paper card in hand and a LoTW credit for the same country you would be better off just turning it in using the old traditional method. I have about 975 paper QSL-QSOs to turn in. Most of them are actually QSOs I turned in years ago for 5BDXCC, CW, SSB That was before they kept full records of everything sent in. Darn !!

It does occur to me that LoTW can still benefit the more established Hams that are looking for fills on their Challenge Cup and don't necessarily want the card.

Bottom line as I was told by the ARRL: Logbook is an alternative to spending postage collecting cards. It is not a means to decrease the cost of DXCC. (The two are Separate)

So for me the best option is to use the old fashion method for the many paper QSLs I've already got, because no matter how you look at it that is the most cost effective option. I will however use LoTW for future Challenge Cup fills because that will also be my most cost effective option.

For those non-North American Hams that were looking for a safer alternative to sending their cards via Post, LogBook is available, but unfortunately it looks like it will cost quite a bit more than just a normal DXCC submission.

Ok Now I understand what you mean.

Just to reaffirm....I know all my qso's are 'in the computer' it's just that the computer doesn't know exactly which band or mode.
The reason I know that is because during the testing, I could see all of them.
The qsl's submitted BEFORE they entered ALL the data had the callsign but just not the details.
I even found an error in the DXCC records for me that was corrected when I pointed it out to the DXCC people.

But I'm in the same boat. MANY of my qsl's are prior 5BDXCC and prior to the using the full detail software.
If I want the full details, I will have to resubmit them, pay the fees and not get a single thing out of it except a more correctly detailed set of records.

Just a clarification for MY mind.
Submitting hardcards to DXCC does NOT have a sliding scale dependent on the amount of Cards submitted?
Submitting LoTW DOES have sliding scale. I saw it...unfortunately I didn't have enough LoTW qsl's to qualify.

But I do have a lot of already paid for QSL payment credits waiting in case I get more. :-))

GA all

Here is some guidance regarding pricing and fees related to LoTW and DXCC.

73, Dave, NN1N

A Word (or two) about Fees

<?xml:namespace prefix = o ns = "urn:schemas-microsoft-com:office:office" />

Logbook of the World is designed to be an alternative to the traditional method of collecting confirmations and award credits. It can also provide an alternative to submitting cards that are already in hand, but its primary purpose is to lessen the costs associated with traditional QSLing (printing, mailing, tracking, filing, and then packaging and sending them to awards sponsors). Logbook is a stand-alone system, with a fee structure to help offset its development and operating costs.

There is a perception that LoTW is an integral part of the DXCC program, and that the Logbook per-credit fee replaces the usual DXCC fee. Perhaps part of the reason for this perception is that we have allowed the submission of old logs, which contain many QSOs that have already been QSLed. Another part of this misperception may be that LoTW will initially be coupled only to the DXCC program. But what happens when Logbook credits are applied to other, non-ARRL awards? As soon as possible, Logbook credits will be offered for awards other than DXCC and others sponsored by ARRL. How would Logbook recover expenses in these cases? In the end, we feel it is practical only to separate the award program from Logbook and deal with fees separately, and that is what we have chosen to do.

While there are situations where a slight cost advantage can be attained (if one has hundreds of traditional QSLs that need to be checked) by submitting cards to ARRL, over the use of LoTW for the same credits, although in most cases it will benefit the participant to use LoTW confirmations first. Bought in bulk, LoTW credits can cost as little as 15 cents ($0.15) each. And LoTW removes the following costs from the traditional course of DXCC submissions: Postage, handling, boxing and shipping materials, insurance, return shipping charges, risk of loss or damage to cards, and the time it takes to do all of these tasks as well as the time it takes to organize an application, write an application, find the proper QSLs to submit, and record these actions in your log.

On the DXCC side will there be a discount for credits submitted through Logbook? The answer in general is yes (in several ways) but again, remember to think of Logbook and DXCC as separate entities. To the extent that the DXCC software can accept data input electronically and reduce DXCC operating expenses, we will adopt a price schedule that reflects this. For up to 120 cards, there is currently no per-card charge. From the beginning of LoTW operation, you will be able to submit an unlimited number of LoTW credits without incurring the $0.15 per-card charge after 120 credits. That fee will continue to apply only to paper-based credits, sent direct to HQ or via Card Checkers. In addition, and for a limited time, you will be able to submit second and subsequent applications without the $10 surcharge as long as Logbook credits are included in your application.

Pricing example 1:

NA7XXX:

*has 150 confirmations in LoTW for DXCC awards. LoTW Cost = $22.50 to $37.50 depending on bulk purchase rate

*has a Mixed DXCC award, but made no submissions in 2004, so this LoTW-only application will be submitted to the DXCC desk. DXCC desk will charge a $10 application fee for the first DXCC application of the year.

TOTAL = $32.50 to $47.50

Pricing Example 2:

NB9CCC

*has 120 traditional QSLs ready for his first application of the year to be sent to ARRL HQ for checking. He also has 17 LoTW confirmations that he wants to use. He starts his application on the LoTW web site, and notes there that he is sending a paper application also, making this a hybrid application. The LoTW charge is $0.25 for each of 17 credits = $4.25

*Has a Mixed DXCC award, and this is his first submission in 2004, so DXCC will charge $10 for the application fee, which includes checking 120 QSLs.

*Needs to have his QSLs returned via registered mail at a cost of $15.

TOTAL = $29.25

Pricing Example 3:

NQ3WWW:

*Has never applied for DXCC

*Has 101 confirmations in LoTW, and submits his application entirely via LoTW to the DXCC desk. He buys 500 credits for LoTW. These 101 LoTW credits cost $0.15 at this rate, and totals $15.15 (his purchase credit balance is reduced by 101 leaving a surplus of 399 purchase credits).

*Because this is his first DXCC ever, the DXCC desk will charge $10, and this includes a Mixed DXCC Certificate, a Mixed DXCC pin, and the application.

TOTAL = $25.15

NI0FFF:

*Has many different DXCC awards, and is working mainly on individual band countries for his Challenge award. He has purchased 500 LoTW credits previously, at a rate of $0.15 each. He has 74 confirmations in LoTW that he would like to use for a DXCC application. LoTW fee total = $11.10 (his purchase credit balance is reduced by 74 leaving a surplus of 426 purchase credits).

*Has already made one DXCC submission in 2004, but with the present special offer from ARRL to use LoTW for applying credits, the application fee is $10 (instead of the normal $20 for

subsequent applications in the same year). DXCC application fee total = $10

*Earns the 160 Meter DXCC award and wants a certificate, DXCC charges $10 for the certificate

TOTAL = $31.10

XZ8RRR:

*Has a mixed DXCC award. He has 190 confirmations in LoTW that he would like to use for a DXCC application. He does not want to buy extra LoTW credits, so is charged $0.20 per credit - Total = $38

*He is not a member of ARRL, so DXCC will charge the normal $20 application fee.

*With a traditional, paper QSL card DXCC application, DXCC would normally charge $0.15 per QSO over 120. But because this applicant is only using LoTW confirmations, he is not being charged this fee, and saving $10.50.

Total = $58.00

I think that comment is totally uncalled for! It is very insulting to
Wayne Mills and shouldn't have been said without supporting evidence
that Wayne is untrustworthy. It seems to me that Wayne has done a very
good job and doesn't deserve those types of comments.

Darryl:
I personally think you are over reacting !!!

I don't see that Joe make any disparaging remarks about Wayne Mills at ALL !!!

I suspect that you, being closely involved with the LoTW concept, are trying reading to much into Joe's comments.

As far as Wayne Mills doing a good job, I'll take exception to that !!!

If you want specifics, I'll site the arbitrary cancellation, without any prior notice to the membership of the following Awards:
-Rag Chewers' Club (RCC) $3
-ARRL Friendship Award $5
-Old-Timers Club (OTC) $3

All these Awards did was foster "Good Will" for the League. They didn't cost the League much of anything. The applicant paid a small fee which should have more that covered the cost of the Award !!!

The "New Ham" doesn't get much out of his League Membership anymore. Keeping a couple of easily obtainable Awards on the books for the Newbie to earn seems to me like a reasonable thing to keep.

Rather than cancel them for lack of interest, I feel that the League should have tried to promote these Awards. Heck we freed up a bunch of pages by eliminating contest line scores, Annual table of contense, other things like that.

League membership keeps falling each year, thing like this don't help !!!

Dave, don't forget to add in the REQUIRED $39 FEE for joining the League that the Non US Hams don't have to pay to get their DXCC.

1131. League management

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-06 01:33:16 UTC
From: Mike Mellinger WA0SXV
Topic: 1131 Message: 1131

I tend to stay out of the ARRL politics. I simply don't attend enough hamfests or club meetings to know the players.

But I do know that if the explanation of LOTW and DXCC and their relationship takes 4 long paragraphs and 5 examples to explain, there is something dreadfully wrong.

Observe:

1. LOTW and DXCC are completely separate. So they say. But somehow they're at the same web page. Why not completely integrate them?

2. LOTW is supposedly to save the DXCC people money. So is the automation of the DXCC records. I don't see reduced fees.

3. You get two bills when you use LOTW credits. Once by pre-buying LOTW credits and a second time when you apply for your DXCC update. Excuse is that the credit might also be used for WAS or CQ or something. See next item. May save money -- who can tell?

4. Do these people have accountants and accounting software? Why not just incorporate the LOTW charges into the DXCC, WAS, or whatever award charges? Minor accounting entries to account for this.

No point in griping to ARRL management -- they'll simply blame it on the Board. For good reason. Ever read the ARRL Board minutes? Absolutely classic micromanagement.

That said, LOTW is great and has potential. Assuming brain-dead policies don't kill it off.

Here here! Well said. I remember getting my RCC award as a fun thing in the early days. I guess I missed out on OTC by never having applied. Always meant to get around to that. Maybe I am too old time !!! :=)

Thank you ...

You are correct, too much is being read into my comments.
However, I am still steamed after that getting my hardcopy
DXCC record some time ago (and was told there would be "no
cost" to convert to the computer) that when I got ready to
do the update after a relocation halfway across the country
and callsign change, I was told, by Wayne, that it would cost
me $10 plus $0.15 per QSO for all QSOs over 120 ... just as
never had the credits.

Quite frankly the ARRL Field Organization (ARES and NTS) are
outmoded and a joke - technology has passed them by ... the
"professional staff" in Newington has run away from contesting
and would probably terminate Sweepstakes and the DX Contest
if they could get away with it (from the contest coverage in
QST, one could almost assume they have) ... and participants
in the DXCC program is being nickel and dimed to death. If I
hadn't been licensed for more than 30 years and a Life Member
for almost as long, I would not give ARRL a second look today.

73,

... Joe, K4IK

I'm going to stay an ARRL member for the simple reason that I have to be in order to be a VE in my particular VEC.

LoTW would make a good case study in how not to develope software, but I suppose it will survive -- there are plenty of examples of poorly designed software in widespread use.

1135. [ARRL-LOTW] League management

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-06 03:41:35 UTC
From: NA4FM (Buck)
Topic: 1131 Message: 1135

LOTW doesn't need to charge per contact. They could charge a $5.00 fee to use LOTW credits for one award, or $10.00 for as many awards as you want to use them in a year. This would allow them to recoup their fees for operating LOTW and not be excessive.

How is LOTW going to charge for contest entries? I believe that was one purpose of the LOTW, upload contest logs.... How much will a large club have to pay for making 20,000 contacts during Field Day when they apply for their award?

My club would find an alternative contest in a hurry!

Buck

1136. [ARRL-LOTW] LoTW and DXCC fees and pricing

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-06 03:41:49 UTC
From: NA4FM (Buck)
Topic: 1127 Message: 1136

I was just reading that the award automatically credits recipients for LOTW contacts according to the cost. For example, I believe the DXCC award allows for up to 125 free QSLs from LOTW. That being the case, LOTW would be free to use. If WAS allows 50, then, of course, it would be free to use LOTW contacts. This would make sense. How many contacts does a person turn in at one time for a DXCC? County hunters, on the other hand, would prefer the paper method for most of their contacts: not that it is a League award.

I wonder how many people turn in 300 cards to confirm DXCC at one time.....

Why do you say that?

You could say that TQSL/TQSLCERT are not ideal programs for end users.
I'd agree with that. I see them as demonstrations; the technology is
intended to be incoporated into logging software over time.

I don't see anything much wrong with the mechanisms/algorithms and
the web site though.

I quit the league years ago after having a discussion with my area representative. He said that he only counted votes that were based on factual evidence in favor of the majority of Amateur Radio operators. I had him clarify it to this degree: He said if I could not justify a "no" vote with evidence acceptible to him, when he reported votes to ARRL, my No vote would not be included. Therefore, only votes that agreed with him or had what might appear to be valid arguments to him to the contrary, would be counted. It was clear that the majority of people in the room at that time wanted him to vote "NO" but he said only a few would be counted as no votes because they were backed up by facts and not by emotion or lack of understanding.

That is the first and last experience I ever had with an officer of the League.

I am now awaiting membership papers again. I have joined for similar reasons to Martin, I want to be part of the VE team, part of ARES and other things that require membership here. ARES doesn't require membership, but training reimbursement costs are only granted to those who complete the courses AND are ARRL members and I intend to take all the courses I can for emergency service.

Politics? Well, I'll just have to be one more voice they won't listen to.

1139. RE: [ARRL-LOTW] (unknown)

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-06 05:06:39 UTC
From: Martin Fouts
Topic: 1105 Message: 1139

As I write this, LOTW is still down for its "upgrade". As I understand it, it was supposed to be back up, if I recall the original message correctly, 10 hours ago. The new ETA has been shifted forward 24 hours. Another 24 hour delay would not surprise me.

All of this just to add a feature that was supposed to have already been beta tested.

Why do I say it makes a good case study?

Because, the system design is inherently flawed. It makes two bad assumptions from the start. First, it assumes that users are not to be trusted. Second, it assumes that the social issue of lack of trust can be solved by, in this case, excessive use of technology. More energy seems to have been put into 'securing' the system than into every other aspect of it, combined.

Rather than build a system that helps hams use computers to verify their QSLs with each other, ARRL built a system that makes it hard for hams, because it doesn't trust them. It then forces these untrusted hams to use two tools that even you admit are "not ideal".

Not only is the system poorly designed from a social perspective, and the visible interface to it poorly implemented, it doesn't even do simple QSL related things very wel, such as dup checking. This means that if I don't want my LoTW records screwed up, I have to keep careful track of when I last uploaded, so that I can export only records it hasn't already seen. Even eQSL gets this right.

Does it, by the way, allow me any way to delete log records that I discover are broken and need to be replaced? I tried to find some documentation on how to deal with this, but I couldn't.

Which reminds me of another failure: I haven't used a system this poorly documented since I used IBM mainframes in the early '70s.

The system fails to follow what few interchange standards there are, as far as I understand it, having invented new fields for adif. Is the ARRL attempting to participate in the formulation of the adif 2 spec? I believe not.

It is based on the hubris that there should be only one online QSL database, and that the ARRL should manage it. No thought has been given to interchange with other such databases, and, if I have been correctly informed, no effort was made to learn from the experience those databases already have generated.

The whole process has been clouded in a secrecy that borders on the mystical. Sadly, it appears this secrecy is best attributed to incompetence rather than malice, but it has made the process unnecessarily difficult and has led to what appears to be several bad design features.

By the way, how do I manage logs for special event stations on LoTW? For that matter, how do I manage logs for multiple stations? The system appears to have given no thought to QSL managers or to special events and their use of recycled call signs drawn from a limited pool.

I have ported TQSL/TQSLCERT to freebsd. It is safe to say that the code is not production quality, hinting at a poor QA process. It is also safe to say that your assertions about mechanisms and algorithms are, shall we say, excessively optimistic.

I have no comment on the internal implementation of the web site, having not seen it, but given the rest of the system, I doubt much thought has been given to robustness and availability. The "upgrade" now in progress makes it painfully clear that no thought was given to rolling update.

What's wrong with the system? If you want a shorter answer, ask what's right, since there seems to be precious little of that.

Don't be confused -- it is just a persistent and incorrect rumor that LOTW has something to do with uploading contest logs. I see nothing that indicates that the current handling of contest logs by uploading Cabrillo files to the contest log checkers won't continue.

There was some complaining on this frequency about having to upload Q's to both the contest address and LOTW (if you wanted the logs in LOTW) but nothing more.

Nifty! But a question begging for an answer.

I currently hold a DXCC with a couple of endorsements. Will the countries and modes for which I already have credit be indicated someplace on LOTW? No sense applying for credits if they are confirmed the old fashioned way.

Look for the linking option. I think that will do it. Unfortunately they have to manually approve the linking. I just don't understand that. Either they have my record on line or they do not? If they do the link should be automated and immediate, no use having a man do what a computer can do better!

Yes and maybe ...

If you have a DXCC and endorsements issued since the DXCC was computerized you can "link" your DXCC account information to the LotW account and the "Awards" display will show a combined view ... current DXCC credits and LotW "confirmations" that would advance your DXCC status.

If your DXCC and endorsements are "old" and your records are not computerized or the band information was not recorded when the records were computerized, you will have to resubmit all of the cards and pay fees for that submission de novo - e.g., if you had 300 countries each Mixed/Phone/CW plus 5BDXCC and 160 DXCC, it could cost as much as $160 (1200 QSOs) plus the cost of shipping/insuring the cards just to claim the credit you have already earned (and paid for).

Hi Ford

RR. Anything that the DXCC desk has recorded for you can be brought into LoTW by "linking" your LoTW account with your DXCC record. LoTW will then be able to display the calls (and links from the calls to QSO data if known) for each band/mode/award etc.

A long step-by-step guide to the application process is available from the user site home page with a link: Applying for DXCC Credits with Logbook of the World

Nifty! But a question begging for an answer.

I currently hold a DXCC with a couple of endorsements. Will the countries and modes for which I already have credit be indicated someplace on LOTW? No sense applying for credits if they are confirmed the old fashioned way.

From: rojomn
Topic: 1146 Message: 1150

When you apply for DXCC you can apply all the credits on LotW that you wish to apply. Pick only those that do not have paper cards. Send your application with your cards and request the missing be gotten form LotW. The data base will be linked and you will get the award. Now you have a record. You can register paper again later if you wish when you want endorsements and do the same thing, part paper part LotW.

Any traditional QSLs will still need to be checked either by sending them to HQ, or checked by a Card Checker in the field.

After checking the data is keyed into the system as normal, and will then be available to be linked into LoTW.

You can create a hybrid application using LoTW by completing an LoTW application and then indicating to ARRL therein that you will also be sending cards to HQ.

I do not have DXCC yet. I need a combination of paper qsl's and lotw
QSL's to reach 100 countries. Since I don't have an existing DXCC
record, how do I get my paper cards registered?? How do I get future
paper QSL's registered?? 73.

Look for the linking option. I think that will do it. Unfortunately they have to manually approve the linking. I just don't understand that. Either they have my record on line or they do not? If they do the link should be automated and immediate, no use having a man do what a computer can do better!

1156. Re: LotW's system design

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-06 16:13:45 UTC
From: Dave Bernstein
Topic: 1105 Message: 1156

All of LotW's extensions to ADIF are in fact consistent with the proposed ADIF 2.0 draft specification. By its adoption of ADIF 2.0 functionality, LotW has done more to move ADIF 2.0 forward than has any other organization, commercial or non-profit.

With respect to system design, the ARRL's DXCC program has always exerted tight control, demanding official documentation of permission to operate and rejecting QSL cards showing any hint of ex post facto modification. LotW's top-level security requirements were driven by this orientation, and are in my personal view reasonable.

That said, there is no reasonable technical explanation for the ARRL's decision to ignore eQSL.cc and build a new system from scratch. LotW's biggest problem is its severe shortage of implementation resources; far more could have been achieved by applying those limited resources to extending eQSL.cc to meet the needs of the DXCC program, rather than by first re-inventing the wheel. This decision may have primarily been driven by the ARRL's perceived need for exclusive control, but interactions with the players over the past years leads me to suspect that ego played no small part.

Some of LotW's useability problems could have been mitigated by better integration with existing logging applications, but the project's management put little energy in this direction. To this day, for example, there is no "LotW Developer" forum in which questions can be posed and answers shared. Clearly, the LotW team lacks experience in collaborative software development -- another factor that may have driven the "ignore eQSL.cc" decision.

While case studies are useful for students and practitioners of software engineering seeking to do better "next time", we DXers have a more pragmatic interest: electronic QSLing and recordkeeping should be a lot less time-consuming and expensive than snail-mailing cards and hand-checking reports printed by the DXCC desk's computer system. For better or for worse, LotW is our starting point. Far uglier systems have been hammered into reasonability via sustained, constructive critique from their user communities.

Dave, I read somewhere this morning (can't find it now), that said DXCC records after 1993 can be linked. Don't think I've sent anything in since then. Will pre-1993 DXCC records eventually be able to be linked? (Not a complaint ... just a question!)

Hi Art

you will continue to log-on under N2WZ. Then select RX9TX as the main call, and merge UA9SIT with that one.

If you have a DXCC record at ARRL, then you will ask to link your RX9TX (or UA9SIT if the DXCC is for that call and no new ones since) DXCC record with the RX9TX LoTW account.

Gil,

Maybe luck or good timing!

I think I was one of the first to log on when the system went live. I had tried to connect and got the "later" message and did a refresh a few seconds later and up it came.

Did the LINK as soon as I realized my totals where only LoTW.

Well said. I've been a Life Member of ARRL for more than 30 years, but I've finally had my fill of its management. Services to the membership seem to be reduced just as quickly as membership fees are increased. If LoTW succeeds, it will be in spite of the leadership, not because of it. If I were not a Life Member, I wouldn't join now.

Or perhaps they lost it? I went to check again and it is still missing. Even worse, it has no record that I ever requested it. About an hour ago it said link requested when I went to the Link account but now it says nothing at all so I submitted again. I still do not understand what they have to approve, either I have a DXCC record (I do) or I do not. In either case why can't the computer handle it? Don't hey have enough work to do already?

My DXCC records are now linked to LoTW (took a few hours, so pre-1993
records may not be instantaneous).

Sweet!!! Got 7 new ones on CW (some I've got cards for but never
applied to DXCC). I'm almost tempted to get the rest of my cards out
and get my records up to date!

Gil

In the early 90s, when ARRL computerized, DXCC staff entered data from paper records as new applications and endorsements were submitted.

I have located your paper record (I like that VK9BM confirmation for the old Papua territory!). You haven't made a DXCC submission in the last 34 years. There is a paper record of that submission, and it only has callsigns for the countries for which you were given credit for. With no recent (since 1992) submissions, your record wasn't placed into the computer, but we will enter what information is known for you, if you make a submission.

After entering this data, it will only be good for Mixed DXCC because the only information captured on the paper records is the callsign of the station worked.

73, Dave, NN1N

> the old fashioned way.

In a word, "Yes". After you have linked LoTW to your DXCC record, get on your LoTW page. Go to Account Status --> Application

There you will find a neat form which list only the LoTW credits which are "new" (new entity, new band, new mode) to your DXCC record. There you can select (via checkboxes) which you wish to credit to DXCC.

I had the same problem. The records on paper from 34 years ago do not have band/mode etc. I have to submit again to get that but I have to give them credit for the quick reply to my query and their offer to enter what they can form the paper record. It probably is enough as I doubt I will ever get to those Band/Mode etc awards.

1179. RE: Re[2]: [ARRL-LOTW] DXCC

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-06 22:20:06 UTC
From: rojomn
Topic: 1145 Message: 1179

Can I send my cards to you so that you could enter everything and what if anything would be the cost. It would not really be a new submission since you already have them but hmm, I don't know what to do now. I doubt I will go for anything but mixed since I don't enough time to get 5BDXCC or anything like that although a band might be possible?

What do you suggest, wait until I want another award (if I want other than mixed) and submit paper at that time and then it can combine with LotW ?

Gil

In the early 90s, when ARRL computerized, DXCC staff entered data from paper records as new applications and endorsements were submitted.

I have located your paper record (I like that VK9BM confirmation for the old Papua territory!). You haven't made a DXCC submission in the last 34 years. There is a paper record of that submission, and it only has callsigns for the countries for which you were given credit for. With no recent (since 1992) submissions, your record wasn't placed into the computer, but we will enter what information is known for you, if you make a submission.

After entering this data, it will only be good for Mixed DXCC because the only information captured on the paper records is the callsign of the station worked.

73, Dave, NN1N

I got this message. It makes no sense to me

We can find no existing DXCC record under your name or the call signs W0MN or W0RYM. If you have questions, please contact dxcc@...

Since I have the award setting here in front of me Number 11546, Sep 28 1970 and since I have a paper record sent to me long ago I must have a record on the computer system, right?

I used to be able to during Beta trials.
But now when I try to buy the credits, fill in my name, credit card info and 'submit', I keep getting a 404 error, page not found.

I've cleared the cache, cleared auto complete, turned off my firewall.
Tried it on the other computer.

All with the same result.
Can't be THAT many people tying up the page....

What am I doing wrong here...

I bought 100 credits this morning by FAX and applied for crediting my DXCC this afternoon. I saw a note about not being able to buy credits by Credit Card yet at the bottom of https://www.arrl.org/lotw/fees.

The credits appeared in my account within 1 hour (or less). and some where debited when I submitted my application (still pending).

PDF is an abbreviation for "Portable Document Format"; it was created by Adobe to provide a platform-independent way of representing rich content.

An free application called "Adobe Reader" will let you view and print PDF files; its available via http://www.adobe.com/products/acrobat/readstep2.html .

I should have figured that.
I was stumped because normally that would come as the 'choice' to use the file and in this case nothing did....
Thanks.

From: Dave Bernstein
Topic: 1173 Message: 1190

On installation, the Adobe Reader does register itself with Windows as the handler of PDF files. If that's not working, right-click on the PDF file in Windows Explorer, and choose Open With ...

In the Open With window, check the "Always use this program to open these files" box; then click the Other... button, and use the file selector to locate your Adobe Reader executable. From then on, opening a PDF file should properly invoke the Adobe Reader.

LOL

Sure Ford. The DXCC folks will make the final determinations of cost on these applications, so they will notice the balance (actually the DXCC software will notice it first). But, when in doubt, ship them an email reminder.

The problem here is really that although you request "Get application as printable PDF", it produces a file called application.php which is not automatically opened by Acrobat Reader. Acrobat will open it fine if you start Acrobat and open this document from the FILE/OPEN menu.

Sure, you can send them but (as I've been complaining about) it
will cost you $10 for the first submission in a year and $0.15
per QSO credit for all QSOs over 120 EVEN IF YOUR ONLY UPDATING
RECORDS FOR AN AWARD YOU ALREADY HAVE. Thus if you have 300
mixed, it would cost you $10 + ((300 - 120) * $0.15) or $37 plus
shipping and insurance.

From: Ford Peterson
Topic: 1187 Message: 1194

Well, I found a bug. Not a big bug, and a simple work around.

I went to the screen that allows me to make application for an endorsement. I already have enough manual checked cards to get a 20M band endorsement, I've just never done the application. No better time than now.

So I'm looking at the matrix screen that allows me to claim credits. I click 20M and the page puts a check mark in all the 'uncredited' 20M QSOs--nifty! But I don't need any QSOs since I have enough credits already. So I remove all the check marks and go to the next page.

ERROR!!!!

I cannot go past the page that allows me to check off the QSOs I want credit for. So I check one of them and proceed to order my endorsement. My application has then 1 QSO I'm applying for credit, even though I don't need the credit.

Total fee? $20.25. $10 for the first application of the year, and $10 for the endorsement. The $0.25 is for the credit that allowed me past the matrix screen to get to the application screen.

Like I said, not a big bug...

Pretty nifty process! It took me, even with the work around, about 5 minutes to complete the application for a band endorsement. Nice job Dave...

LOL

Sure Ford. The DXCC folks will make the final determinations of cost on these applications, so they will notice the balance (actually the DXCC software will notice it first). But, when in doubt, ship them an email reminder.

David - NN1N,

Last time I made a DXCC paper application (last fall), I paid too much. So there is actually a credit balance on my account at the DXCC desk. Can this be applied to my LOTW account? Linking the calls and dxcc information didn't yield any sort of credit balance on my Account, so either it cannot be done or there is another procedure I must execute. Can I buy a clue?

Dave,

I just went to place an application for another endorsement, the CW endorsement. But apparently you can only have one application in process at a time. I have enough credits to get the CW endorsement too, but I've never made the application.

Frankly, when I applied for the DXCC, I gave them enough money to do the CW and 20M, which is why my account had a $20 credit. For whatever reason, they gave me the Mixed mode DXCC certificate but did not do the endorsements--I must have forgotten to check a box at the W0DXCC conference where I applied for the award. Because that was in a prior year, I now need to pay the $10 'first application of the year' fee of $10, so my account is short $10 but I just wanted the two endorsements. Again, there appears to be no way to contact anybody about the application--no link provided.

I was going to apply for both at the same time, but when I clicked on 20M and CW, the matrix got pretty complicated and since I didn't need ANY credits to make the application, I figured I would just do two separate apps. Apparently, that is beyond the scope of the software build.

What the heck. I've waited this long, I guess I can wait until they process the 20M and then apply for the CW. By then, maybe the rest of the world will 'discover' LOTW and cough up their logs so I can grab the rest of the bands too...

None of this is a big deal. And I'm certain my account is somewhat of a fluke of nature. And once my existing credits are burned, then it won't happen to me again.

Just an FYI on all the above...

I agree! The whining is just that--a nuisance.

Somewhere in my dark and distant past, I was charged with the responsibility of figure out how much it cost the company (a bank) to make a corporate deposit or cut a company check. 15 years ago, the number was $62--today, it must be $80-$90. A fully loaded payroll will run, at a minimum, about $60 per hour. Getting 'knicked' $10 for anything that requires a person with a brain to handle is a HUGE bargain.

As an Accountant, I'm confronted all the time with whining about charges for this and charges for that. Reality bites... Any time a real person must handle a piece of paper, and handle it accurately, it is going to cost money. Just entering a name and address on a computer screen takes 2 minutes. Figure it out boys and girls. 2 minutes, times 225 a day, is AT LEAST $480 a day! And that is just the payroll for one person entering names and addresses. Nothing about computers, programmers, supervision, telephones, office space, benefits, etc. So processing your DXCC application, automated or otherwise, is $$$$$.

The fact that the ARRL does it for as little as it does is a testimony to the dedication and "just do it" attitude at the ARRL.

> system.

Doesn't have to be that way ... the infrastructure is already in
place for the user to enter the missing data, and print a data
sheet. Since the cards have already been "checked" by HQ, it
should only be necessary to make photocopies of the cards to send
with the sheet, or take the cards to a field checker, an officer
of a SSC or officer of a DX club to verify the existence of (not
check) the cards.

If on receiving the list and certification, the DXCC desk had a
question about a card they could request that card for audit.

> You have an option, don't update or pay for the service rendered.

The cost should be minimal as verifying already earned credit is
minimal service rendered ... actually it is part of the cost of
upgrading systems (data conversion). I've never known any other
business (that wanted to stay in business) to charge its customers
a data conversion fee when upgrading systems or to go back and
charge customers new price to continue using a product purchased
20 years earlier.

I am not quite clear but this is my understanding. I must send the cards again and make a formal submission. I know it is the only way you can get the dates and bands. I think I have enough to make a 20 Meter mixed endorsement.

The question though is will ALL of my data form ALL of my cards be entered so that in the future I can use them (EVEN THOUGH IT IS NOT NEEDED TO HAVE ALL FOR THE FACT I HAVE A DXCC ALREADY) or will you enter only what is needed to complete the submission? I hope you will be telling me that every bit of data from every card that I send will be entered to the full extent of what the data base can contain.

Is that true? Is so I am ready to submit.

Thanks for your reply.

Gil

In the early 90s, when ARRL computerized, DXCC staff entered data from paper records as new applications and endorsements were submitted.

I have located your paper record (I like that VK9BM confirmation for the old Papua territory!). You haven't made a DXCC submission in the last 34 years. There is a paper record of that submission, and it only has callsigns for the countries for which you were given credit for. With no recent (since 1992) submissions, your record wasn't placed into the computer, but we will enter what information is known for you, if you make a submission.

After entering this data, it will only be good for Mixed DXCC because the only information captured on the paper records is the callsign of the station worked.

From: Art RX9TX
Topic: 1200 Message: 1200

Hello Arrl-lotw,

After the time spent on the LoW site, some suggestions came to my mind.

1. For the log synchronization purposes it would be useful if we could download the file containing all DXCC credited contacts. May be these contacts could be just added to the lotwreport.adi file? I do not know if ADIF file has an appropriate field for this kind of information, AA6YQ could clarify that. I know paper credits have no time data in your records, anyway I think software developers can handle this.

2. Concerning LoTW submissions, "20 USD for 1st application and 30 USD for all next applications during a calendar year fee" looks senseless. This rule avoids me and others of submitting the LoTW confirmations more than 1 time in a year, while you lose my money :)). We'll just will be have to wait until next year. Since LoTW submissions are free of human efforts maybe you could allow us, ARRL members and non-members, submit the LoTW confirmations all the year based on the only application fee during a year?

Linked my existing DXCC award and LOTW overnight. Not sure how long it took but the message and the linking were ready for me at breakfast time in the morning. Totally unproblematic - thankyou.

I'm impressed by the coverage of the awards module - it makes it very explicit what awards one is eligible for. Very useful.

Now I've seen how useful the link is between LoTW and DXCC I'm looking forward now to non-ARRL awards being linked into LoTW.

Thanks for a great facility.

One thing that seems to be missing is a list of which cards in your matrix of credits came from LotW and which from paper? You can determine it but a special flag would be very nice.

Another thing is needed and that is a query to return a list of VERIFIED BY ARRL cards.

NOT whining here, just thinking about some enhancements that would be nice.

John,

As far as I know, there are NO LoTW QSLs credited yet so there may well be this indication in ones DXCC record (I would also hope this is so).

I was told that it will take 2-3 weeks for my LoTW application (#63) to be processed by the DXCC desk. Apparently it goes into the regular queue for validation before the QSL are officially good. This makes some sense as I doubt that log placed on LoTW are validated as to the various DXCC criteria such as License/Landing Permit/etc.

Once the credit is awarded, what does it matter? The credit is worth
the same either way.
>
> Another thing is needed and that is a query to return a list of
> VERIFIED BY ARRL cards.

The "awarded" column in the chart gives you the total, click on a band
or mode, in the next window select "All Credits" to get a list of the
callsigns. I'm not sure what more you need.

>
> NOT whining here, just thinking about some enhancements that would be

>

I thought the validation was done prior to the issue of the digital certificate required for uploading? If not, then what is the point of all of the front end security in LoTW?

My question is - are LoTW and the DXCC system linked in a "duplex mode", i.e. data from one system can flow to the other both ways automatically? If not, i.e. the DXCC system will not automatically add the appropriate band/mode entity credit from the LoTW system when a LoTW credit is used, then I can see the reason for the delay in your DXCC record being updated as the data still has to be hand entered by the DXCC staff.

However, if the DXCC system _WILL_ accept direct input from LoTW automatically, then there shouldn't be any delay in the updating of your DXCC record. If that is the case, I would even take it farther by saying that the use of LoTW credits should not be counted against your normal submission(s) to DXCC. Since there is no labor overhead (if the update is being made automatically by the system), the fee incurred by using the LoTW credit should suffice IMHO. I would think that by doing this, LoTW usage would increase. Right now as it stands, it is cheaper to send in existing cards than to use LoTW. For example, I have a card from 6Y with Q's on it for 80/40/20/15. I also have a LoTW confirmation for 6Y on 20. Providing I do not exceed 120 QSO's on my submission, it is cheaper for me to send in the card than it is to use the LoTW credit. Of course, this is all predicated on the interface between the systems.

I would hope that the ARRL would configure both systems to talk to each other automatically and they would modify the protocols used to apply LoTW confirmations to your DXCC record - this I feel, IMHO, would increase the usage of LoTW and increase participation in DXCC.

If LoTW confirmations still need validation, this makes all the LoTW
statistics senseless. I was absolutely sure that if I see a QSO
confirmed by the LoTW , the other QSO side is good for DXCC as well.

Surely, if the DX station logs now in the LotW database have not been scrubbed for issues like proper licensing/landing rights, it would make sense to scrub them once and delete any disallowed operations from the database, rather than rescrubbing them each time a set of credits is applied to DXCC. Perhaps Dave can clear this up.

Agreed, I would think that the vetting would take place WHEN the certificate is issued. The ARRL states..

"To minimize the chance of fraudulent submissions to LoTW, all QSO records must be digitally signed using a digital certificate obtained from ARRL. Obtaining such a certificate requires verification of the licensee's identity either through mail verification (US) or inspection by ARRL of required documentation (non-US). "

What I haven't been able to find are the security protocols for issuing additional certificates (if any), but maybe I am not looking in the right place. For example, Art goes to Mongolia for holiday and operates there as JT/RX9TX. When Art returns home he will need to have an additional certificate to upload his JT/RX9TX Q's. Does Art have to go through a vetting proceedure BEFORE the certificate for JT/RX9TX is issued, i.e. proof of operation - or is the issuance automatic because he signed the certificate request with his exisiting certificate for RX9TX? While it may be acceptable for portable/mobile operations within ones own DXCC entity to be automatically given additional cert(s), I would think that a request for an additional certificate for a seperate DXCC entity would require proof of operation. I would think that it should be the responsability of the LoTW section to make sure that the Q's entered into the system are acceptable to the DXCC Desk.

I don't known that any disallowed logs should be removed from the database. There are those who are "waiting documentation." If they are removed they logs would need to be uploaded again if/when documentation is received ... potentially many years later. It is also possible that a given record would not be valid for DXCC but might be acceptable for other non-ARRL awards (e.g., a maritime mobile might be acceptable for an award based on ITU zones or grid squares).

Better solutions are: (1) adding a "not valid for DXCC" flag to the record which could be removed if/when documentation is received, or (2) not issuing a certificate until the documentation has been approved.

As a Canadian ham, I needed to submit a paper copy of my license and personal ID to get my root certificate.

Once I had that root certificate, I applied and received certificates for CK6LB, XM6LB, VX6LB, VA6XDX (my contest call) and XL6XDX without any further documentation.

I also operated as BY1PK/VE6LB and it appears, based on the certificate issue date and email dates, that I had a certificate for that call issued before I received confirmation that my submitted documentation was OK ad DXCC.

I'm sure Dave, Bill or Wayne can and will clarify this process for us.

If that is the case, then I can understand why they are manually checking the LoTW confirmations at the same time they are doing the rest of the submission - interesting. I would have thought that they would have vetted the validity of the additional certificate(s) before issuing it/them. If that is the reasoning behind that, I can live with it.

As pointed out several times, DXCC and LotW are separate operations.
LotW certificates are issued by a different group/office/program
than the DXCC desk.

OTOH, it would make sense for the LotW database to identify those
calls/operations not acceptable for DXCC. I would hate to "waste"
a LotW credit on a QSO that the DXCC desk would not accept. Does
anyone know if a policy has been developed for those cases yet?

Dennis,

I can live with this as well.

The reality of paper QSLs is that ever card needs to be checked to Call, Country, Band, Mode and Date by either a field checker of the DXCC desk, even if it's WB0WAO. To do this for the on input for 42,000,000 QSO records doesn't make much sense since the vast majority of these QSOs will never be used to apply for DXCC credit.

GM all

these are good questions.

LoTW does the authentication of users as best it can. It follows the documentation rules here: https://www.arrl.org/lotw/docreq

If someone operates portable from a DXCC country that requires additional documentation, we ask for it at the certificate issuance stage because the certificate is tied to DXCC country.

As Joe pointed out though, as a general rule, the data entered into LoTW is allowed to go in as long as we know who is placing it into the system. LoTW is a stand-alone system. The DXCC system still has its own filters installed that look for disallowed/illegal operations, or any other sort of issue that would stop DXCC credit from being granted.

But, just because DXCC disallows some QSOs from counting, doesn't mean that those QSOs aren't good for other awards, such as someone operating MM from a rare grid square. So, we want to make sure that all the data possible gets into LoTW, and then the various awards programs will do their thing.

As for the timing of processing DXCC applications, right now LoTW outputs a file that can be printed and machine-read with a scanner, but the DXCC software is old so the automation 'into' DXCC is not going to be ready for a while. So, there is still human intervention required to get records into DXCC--hence the reason for putting LoTW applications into the queue at DXCC.

Dave,

Thanks for further clarification (appears you're always there as well).

My guess would be that I could add Qs to my BY1PK/VE6LB LoTW file at this point without submitting further documentation that I had returned to China. My guess would also be that the DXCC desk would be the ones who would expect or ask for proof of my new operation from China before accrediting and of these new Qs for DXCC.

A logical and probably correct explanation. It might be nice if a valid flag was there that could be set whenever possible. I bet the majority of useful ones would be set. Who cares about K , anyone can get that at anytime but 3B9C is another matter. It would help them a LOT if that one is in LotW and marked valid as it could save a LOT of time with the proper software of course.

If that's the case, then I suggest that a "DXCC Approved" field be maintained for each LotW QSL. This field should be set on record creation to "Yes" for operations from the vast majority of entities that are not presently subject to the DXCC system's "potential illegal operation" filters (VK, G, K, PY, JA, etc), but would otherwise be set to "No".

When the DXCC desk approves an operation, LotW would then set this field to "Yes" for all LotW QSLs with that operation's callsign(s). While the communciation from DXCC to LotW might be manual, the actually implementation would in LotW would of course be automated.

Assuming this field were made accessible via the LotW ADIF output facility, then logging applications could appropriately synchronize with DXCC credit; changes to a QSL's "DXCC Approved" field would of course result in an update to its "last change" date. This scheme retains LotW's ability to support award programs other than DXCC.

By enabling DXers to more automatically -- and accurately -- track their verified DXCC statistics using their own logging applications, the administrative burden on DXCC desk personnel would be lightened. DXers would like it too...

>
> As Joe pointed out though, as a general rule, the data entered into LoTW is allowed to go in as long as we know who is placing it into the system. LoTW is a stand-alone system. The DXCC system still has its own filters installed that look for disallowed/illegal operations, or any other sort of issue that would stop DXCC credit from being granted.

>
> But, just because DXCC disallows some QSOs from counting, doesn't
mean that those QSOs aren't good for other awards, such as someone
operating MM from a rare grid square. So, we want to make sure that
all the data possible gets into LoTW, and then the various awards
programs will do their thing.
>
> As for the timing of processing DXCC applications, right now LoTW
outputs a file that can be printed and machine-read with a scanner,
but the DXCC software is old so the automation 'into' DXCC is not
going to be ready for a while. So, there is still human intervention
required to get records into DXCC--hence the reason for putting LoTW
applications into the queue at DXCC.

1220. LoTW with Paper Applications

Yahoo group: ARRL-LOTW (2003 — 2007)

Folks,

From an exchange I had with the DXCC desk today, I discovered some information that you migh want to be aware of. Although one gets the impression from the LoTW Applying for DXCC Credits with Logbook of the World information that as long as you identify that you're "planning" to submit a paper submission, one should go ahead with a LoTW submission, get those credited and send the paper sometime later in the year, that appear to not be the case.

I've done just that and now know that the DXCC desk will hold my LoTW application until they get my paper application. This is also true if you check the box on the paper application to indicate that you are also submitting a LoTW application.

The point of this note is to advise that since the paper and LoTW applications will be co-ordinated by the DXCC desk, there is little benifit in submitting one without the other.

I <THINK> I understand it this way.
If this is the members FIRST submission of the year, and eligible for the free first submission, you can 'link' the hardcard and LoTW submission together by so indicating on the paper form and the section on the LoTW Application.
They will be held till both arrive and count as one submission.
But.
After that, additional submissions are subject to the $10.00 charge.
If you link them by marking the paper form or the LoTW application do they count as one submission or two?
I read it as one.

I'm confused, and I'm usually too ignorant to be confused so easily.

From: Julio Peralta
Topic: 1222 Message: 1222

Sometime ago there was a thread on backing up your certificate (s). I followed the procedure outlined in the e-mail.

Today I happened across the e-mail and noticed it makes reference to a .p12 file extension for the certificate file. Just for grins I checked my backup copy and was unable to determine what the file extension is. The 2 files I backed up appear to have no extension.

Is this correct?

By default Windows hides the extensions (e.g., .p12) of any
file type that is registered. tQSL registers the extension
.p12.

To see if it is correct, try right clicking on the file and
select "properties." I think that will display the full
file name and extension.

Yes a stupid design flaw of Windows. Why they use an extension and not make it display by default is something I do not understand. That is the first thing I do is go to My Computer/Tools/Folder Options/View and set what I want and apply to all files. Sheesh what a pain. At least it holds this .

It's a "feature" borrowed from the original Mac/OS design -- where it works reasonably well most of the time. Of course, the Mac/OS design relied on something called a resource fork, not present in windoze...

You likely don't have the file extensions viewing turned on on your system (common extensions a not normally displayed). All file have an extension in the Windows world.

Right click on the files you want to look and select properties. You should see the extension displayed there.

From: Phil Cooper
Topic: 1230 Message: 1230

Hi all,

Just a couple of observations now that I have linked my paper DXCC to the LoTW list.....

When I go through it and and click on APPLICATION, it comes up with a list of stations confirmed by LoTW that I can add to my DXCC total.
I have to click on each of those to add them, which is fine, but why doesn't it say which mode they are?

Also, as I am only interested in my RTTY totals, I would like to be able to check my totals by band as well for RTTY, but it brings up all QSO's, and again, does not mention mode.

In that small "pink box", there are links across the top that list and one is for RTTY, but when I click on that, nothing happens.

Is it just me, or has anyone else noticed this?

73 for now

Sounds pretty normal to me, Tom -- considering that many of the people you worked then weren't using computer logging. People seem to have started, at least, with their logs that were already computerized. For my 76K QSOs from 1994 to the present, I have gotten about 4500 matches so far.

Hi Tom. So far I've had 861 QSL matches out of 24,483 QSO's in LoTW - about 3.5% return, including 111 DXCC entities. My LoTW percentage returns to date range from 0.4% in the 1980's to 6.4% for the 2000 to 2004 period. My average return of 3.5% for 25 years (except 1987 yet to be transferred from paper logs) seems to track closely with the total LoTW stat's of about 3.1% "return" for all users.

I think the numbers from the 1980's and early 1990's will grow as more DX'ers and contesters dig out those old logs. Here's my stat's:

Years - QSO's - LoTW QSL's - Percent Matches
1979 - 52 - 0 - 0.0%
1980's (minus 1987) - 5978 - 26 - 0.4% (includes 4 matches from the year 1980)
1990-1994 - 6073 - 146 - 2.4%
1995-1999 - 7514 - 377 - 5.0 %
2000-2004 to date - 4866 - 312 - 6.4%
Total: 1979-2004 to date - 24,483 - 861 - 3.5%

It makes me wonder whether people logged with enough time stamp accuracy (manual logging) for LOTW to be able to make an automatic match. So data entry from an old log would be of limited value. I have often wondered how many busted QSOs are in the older log. Whether for bad copy on the call, bad logging technique (beginning or end of QSO?) etc. My contest logs are pretty accurate time stamps because the exchange is so short.

I was involved with a thread on the eQSL reflector at one point where people were discussing when they logged the Q. I found the discussion very frustrating to say the least. If memory serves me correctly, about 50% of the folks logged the time the instant the QSO was official--even if the QSO lasted for 10 minutes. Some would enter the time that the callsign was entered into the callsign field. The other 50% logged at the end of the QSO. For contest Qs, it generally does not matter. Except that for many folks chasing DX, the callsign may have been entered into the log the instant they started calling the station in a pile-up. The log I was using early in my computerized logging experience was Logger by Bob Furzer. He would log the time when I hit the enter key. And I always hit the enter key on the final exchange. For many folks, this just is not the case, which is why I was so frustrated with the process. I wonder what is the correct technique? I assume that the correct method is to time stamp the Q when the enter key is pressed at the end of the QSO, which is the method I continue to use to this day (Writelog and Logger). Apparently, this is not the case for many folks, which just baffles me. Hence, my query about busted time stamps.

Hand picking log entries might be a valuable tool. I just think of all the JAs worked in a DX contest and ponder how long it would take to enter all that data. And of what value would it be to either the JA or you?

I've got 2327 QSLs from 19876 contacts going back to 1997, which is when I obtained a dedicated computer for the operating position. The first two QSLs on the list are from 1998 and 1999. By 2000, the rate picks up dramatically.

Guys,
So far, my computerized WV logs have garnered the following:

54,670 QSO records4,213 QSL records
These logs are are from about 1995 or 96. I was late coming to the table
with the computer logging. I still have some more to dig out...if I can find the
floppies.
Then all the logs prior to that are paper. Lots of contest Q's in there. I won't go all the
way back to 1956 though!

From: Tom Horton
Topic: 1236 Message: 1236

Seems like I have seen it somewhere, but can't remember.
What is the time differential that LOTW allows to QSL a record?
Anyone know?
Thanks, Tom K5IID

If it is 30 minutes, then I am much more comfortable with the time stamp matching. eQSL was only 5 minutes or so. Heck, I've been known to pound my key for an hour trying to bust a pile-up.

Thanks guys!

That makes it a lot better for me too. On these paper logs that i am computerizing,
I'm not trying to get the time exactly right, so I will just attempt to keep it in a 15-20 minute time frame.
Thanks!

Hi Phil,

Didn't see anyone give you an answer to your query -
was sure wishing someone would, as I have the same
problem here - if you are doing something wrong, then
I am doing the same thing because I can't figure out
this '''super matrix''.
Cheers,
Joe W7LPF

Subject: [ARRL-LOTW] Account status

Hi all,

Just a couple of observations now that I have linked my paper DXCC to the
LoTW list.........

When I go through it and and click on APPLICATION, it comes up with a list
of stations confirmed by LoTW that I can add to my DXCC total.
I have to click on each of those to add them, which is fine, but why doesn't
it say which mode they are?

Also, as I am only interested in my RTTY totals, I would like to be able to
check my totals by band as well for RTTY, but it brings up all QSO's, and
again, does not mention mode.

In that small "pink box", there are links across the top that list and one
is for RTTY, but when I click on that, nothing happens.

Is it just me, or has anyone else noticed this?

73 for now
Phil GU0SUP

> why doesn't it say which mode they are?

Note that there are boxes for modes and bands.

All modes and/or bands that a Q will count for have an "X" in their box.
If a Q has no mode X'ed, it means you already have credit for the mode.

For example, lets say that 2 years ago you worked your 1st Conway Reef
on 20m CW, submitted and got DXCC credit for it. Then lets say you later
worked another Conway Reef on 10m CW. Assuming you and the 3D2/C
both submitted your logs to LotW, your application matrix would show
the 10m box X'ed for 3D2/C. It would NOT show CW X'ed, as you already have
CW counted from the previous contact. The only boxes X'ed are those
the will be credited.

Topic: 1242 Message: 1242

I am trying to download the ADIF file. When I click "DOWNLOAD", the file is display as HTML...that is, a web page. Shouldn't it ask me where I want to save the info....?? The guys at ARRL LOTW say it is my browser config but I can't find any settings which would force to download to ask how I want it saved...

Using XP and IE....any help?

Thanks...Lou N2TU

In Windows Explorer, under TOOLS menu|FOLDER OPTIONS|FILE TYPES tab,
locate the listing for the file type being downloaded. Click ADVANCED and
put a checkmark in the box that reads "Confirm open after download."

An alternative: Hold down the <shift> key when clicking the link to the file.

This is the Windows XP instructions, if your using an older OS, it may look slightly
different.

After you change the Explorer setting, it should ask you for a location to save that file
to.

Under folder options, there are no references for ADI files.

I also tried holding the shift when I click the "Download Report"
link on LOTW...again the page loads as HTML...

I tried the Save As from the HTML page...marked it as .txt....then
renamed it as an .adi file and it worked...

So....again the question....how do I load this file as an ADIF file
without going through the manipulations I described above...

Thanks for the help!...very much appreciated!

Whatever type of file is sent to you, right click and select save target as,
you can name it anything that you want to, including changing the file type.

I'm afraid that if LOTW is going to be 'promoted,' it will be the users that have to do it. I seriously doubt there is promotion money in the ARRL budget for LOTW. Since LOTW is a 'cost center' and not a 'profit center,' expanding the user base is of limited value to the ARRL. It is of GREAT value to us, the users. So any brilliant ideas about promoting to the masses would be great--especially the DX masses! Promote or perish...

My DX totals haven't moved in weeks. I'm stuck at 72 countries out of 20K Qs--about 1/2 of which are DX and about 260 countries represented. So how do we get people in Africa to sign up? How do we get folks that don't speak english in the former soviet union to sign up? Southeast Asia? Ditto... I seriously doubt many of those folks have even heard of LOTW! And how many language translations do you see in the instructions for LOTW? It's pretty arrogant for us to think that EVERYBODY speaks and reads English...

1254. Promoting LOTW Worldwide

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-20 14:26:23 UTC
From: Ford Peterson
Topic: 1254 Message: 1254

I think the notion of users promoting LOTW is important to the continued success of LOTW. Now that it is a more 'full featured' application, the time is ripe for starting to promote its use worldwide. In my case, almost 12% of 20,000 QSOs are confirmed. 260 countries are represented in the log and only 72 countries are represented in the QSLs. This needs to change. To that end, I have several notions to toss into the ring for discussion...

Regarding promotion:

1) Somebody needs to develop a display for use at hamfests. A typical commercial trade show display should cost $10,000US to $50,000US. Obviously, this is out of reach as the 'budget' for LOTW is no doubt minimal. I can envision a display that can be either replicated for use by volunteers at hamfests, or loaned out to similar groups willing to be LOTW advocates. Graphics can become very expensive. They can also be developed inexpensively with some thoughtful creativity. What is needed is a 'champion' for the cause. An individual or group with appropriate skills to undertake the project. Display a collection of awards, information handouts, instructions, etc. I am confident that the ARRL would be supportive of such an approach if somebody can champion the cause.

2) Somebody needs to develop bridges to the language barriers that currently exist with LOTW. I would love to have a LOTW QSL from all the exotic DX in my log--a sentiment that is shared by most DX hounds that haunt this reflector. The current roll-out pretty much assumes that English is a universal language. Many around the world are able to communicate using a minimal English vocabulary. But how many of these folks can decipher the LOTW user instructions? I believe this explains the level of participation from Western Europe, and the lack of participation from countries whose natural political mindset aligns with the east rather than the west. Again, a collection of champions with appropriate language skills are needed to develop translations to be posted on the LOTW website.

3) As #2 is developed, appropriate promotional links need to be developed. I recently viewed the web page for the Gibraltor amateur radio group. It happened to be in English. The organization's webpage could easily host a link to LOTW. An information page could also be provided to describe the system in detail--language appropriate. A group of champions are needed to orchestrate these seamingly simple tasks. Cross pollination of organizations using web hot-links is an excellent promotional tool--but time consuming and riddled with language barriers as those with the language skills need to be matched with people able to insert links.

4) Identifying foreign amateurs willing to present LOTW to their country's amateur community. In some cases, articles authored in native language would be excellent. In other cases, presenting LOTW in a local gathering (possibly using tools developed as #1 above) may be available.

Comments? Better yet...volunteers?

Thought this was such a great and simple idea, just added links from the
Florida Contest Group's Web site, http://www.floridacontestgroup.org
to the "LoTW" Introduction page, https://www.arrl.org/lotw/intro

Probably not the most informative Introduction page, but it gets folks
on the "LoTW" site, where they can start poking around for more info.

hi LOU
you can add the <adi> extencion by yourself go to file types click
new and add <adi> then click ok and reboot your pc ....
after go to arrl and see....
that,s the way worked for me.

With the growing availability of computer projectors in businesses
worldwide, another approach might be development of a Powerpoint program
with professional audio and/or video content that could be lent to local
clubs for use in their booths at hamfests. I suspect many clubs would be
able to find a projector and screen, plus some amplified speakers for use
with a laptop. Together with some well worked-out paper handouts, it could
be a lot of bang for the buck.

Better yet ... make something folks can download from the Internet and
burn onto a CD, like some of the other ARRL material.

Hmmm ... might have to do some homework on LoTW and give a talk to our
local club about it. Has anyone already done this? If so, what
material did you use and what did you talk about?

Ford,

I have made similar suggestions privately ... unfortunately the people involved with LotW also have other tasks not related to LotW.

1) There should be major "what is LotW" and "how to use LotW" push - both in the US amateur publications *AND* in various international publications *IN NATIONAL LANGUAGES*

2) ARRL should be working through IARU to create a more user friendly way for DX stations to register ... perhaps enlist RSGB, DARC, REF, RAC, etc. to check credentials closer to the user.

3) LotW should be represented at every major US hamfest, ARRL Convention, and international hamfest with both "how to" literature and a way to register on the spot.

4) A multimedia presentation, suitable for presentation at local "general interest" radio clubs should be prepared and a cadre of volunteers recruited to make those presentations, answer questions *AND* register users. Perhaps, the same individuals could be certified as field checkers for DXCC to provide "full service"

5) LotW should be promoted in the National Contest Journal (NCJ) to encourage the use of LotW by contest DXpeditions.

73,

... Joe, K4IK

I had emailed the LoTW Help Desk twice asking for promotional material. Both emails went unanswered!

While at Dayton, I took the opportunity to discuss the promotion of LoTW with Wayne Mills, who graciously offered to email his PowerPoint Presentations to me. I received them last Tuesday and am in the process of modifying them to present to our local club. They are very basic, but it is something to help with promoting it!

I appreciated the quick response - when I spoke to the correct person!

Here's a thought:

Fund another BS7 (SCARBOROUGH or should I say SCAFFOLD reef) dxpedition and QSL is only via LOTW. Bet that would get tons of folks registered .

Seriously, I agree that promotion is the key! The LOTW site really needs to have multiple language selections, and the League needs to make an effort to get other countries societies to link to it. It's not much, but it is a first step, and relatively cheap to do.

Ford, I think you're right on track! How about running for president???

Hi Lou:
I have been downloading my LoTW reports Since day 1 of Lotw.
I using Win ME and the latest version of IE with all latest
updates on both and have never had a problem.

Just to make sure we are both on the same page, here is a checklist:
1- logon to lotw
2- Click on "Your QSO's"
3- click on "Download report"
4- fill in info as required (Suggest setting "Show QSLs received since:"
to 2000-01-01 and check off "Include QSL detail:"
5- click on "Download Report" , the gray box at the bottom of the screen
NOT the yellow box on the side of the screen !!!

At this point you should get the you should get the "File Download Window"
and should allow you to check off "Save this file to disk".

If this doesn't work, let me ask you if it works for downloading from another
site ???

I'll be setting up a customers computer next week with XP Home Edition.
I'll try to see if I can setup LoTW on it and download my report if your
still having problems.

Bob & Lou.....Let me chime in again. What we get is the save file as option hoever, we can only proceed and save as a .txt of .html file. After it downloads, a html file opens in IE and it needs to be saved as a .txt and then the extension needs to be renamed to .adi.
Try as I did, can not work around this method...Right Lou! I use Win2K Pro although the operating system seems to not make any difference. Dave, K8GVK

I just received the weekly ARRL DX bulletin. It had the usual list of DX stations and their managers, including an American on station in Iraq. Nary a mention of LoTW.....

I don't know the circulation of the DX bulletin, but it is sent every week. Here is an easy, cheap (free?) way of advertising to the DX community. I'm sure that the other bulletin editors could be persuaded to add a line to their weekly bulletins.
This might persuade the casual DXpeditioner to simply upload their logs, instead of burdening themselves or a manager with months of paperwork.

Jim

I'm running Windows XP (Professional) and have the same problem Lou is having when I use Internet Explorer.

Let me explain what happens in detail:
1. Logon, then use "Your QSOs".
2. Click "Download Report".
3. You get a callsign, received since, etc. form. At the bottom there's a "Download Report" button.
4. Click "Download Report". You can not right click here as some have suggested.
5. The ADIF file is displayed in my web browser. Not a "File download window", etc.
6. File/Save as suggests lotwreport_adi as filename, type "Web Page, complete (*.htm, *.html). If you enter a filename here, you get "filename.htm". If you type "filename.adi", you get "filename.adi.htm".

This is because of an Internet Explorer bug. The problem is that LoTW is sending a file of MIME type "application/octet-stream". That's a binary file, and any reasonable web browser would ask you to save the file. IE is broken (and has been for years) - it looks at the binary, sees what looks like a HTML tag (<PROGRAMID:4>LotW) in the first few characters, and overrides the file type LoTW sends it and treats it as a HTML file. (It ignores the fact that LoTW says the suggested filename is "lotwreport.adi", converting it to lotwreport_adi.htm).

Use a web browser that follows standards (Netscape, Mozilla Firefox, etc.) and it'll work fine. IE is broken, ARRL can't fix it.

(Actually, putting more stuff in the beginning of the downloaded report
will probably make it work - put several more lines of comments prior
to the PROGRAMID tag, and IE will start to act right.)

>If this doesn't work, let me ask you if it works for downloading from
>another
>site ???

Downloads work fine everywhere else. I just rename the .htm file after
saving it.

I'm also running Windows XP (Professional) and it works
perfectly for me. You have a configuration problem with
IE 6.

> 6. File/Save as suggests lotwreport_adi as filename, type "Web Page,
> complete (*.htm, *.html). If you enter a filename here, you get
> "filename.htm". If you type "filename.adi", you get
"filename.adi.htm".

DO NOT select "Web Page complete" ... select all file types and
leave the file name alone: "lotwreport.adi"

If necessary, select file type as TEXT.

> This is because of an Internet Explorer bug. The problem is that LoTW
> is sending a file of MIME type "application/octet-stream".

No bug with IE ... you have IE and/or Windows misconfigured.

Find an ADIF file (.adi),
right click on it
select "open with"
select "choose program"
choose "Notepad"
check "always use selected program to open this kind of file"
click "OK"

Now any file with a .adi extension will be considered a text
file and will be treated as such in IE.

How IE handles "application/octet-stream" files is described at
http://msdn.microsoft.com/library/default.asp?url=/workshop/networking/moniker/overview/appendix_a.asp
- this article explains how IE tries to be helpful with binary
downloads such as those from IE.

However, it looks like specifying that .ADI files should open with
notepad (right click, open with) allows the file to be recognized as a
download versus displaying in the web browser.

It's still a bug since using a properly working web browser (Netscape
or Mozilla) works. LoTW could make it always work by including a >256
byte header before the ADIF content.

> > 6. File/Save as suggests lotwreport_adi as filename, type "Web Page,
> > complete (*.htm, *.html). If you enter a filename here, you get
> > "filename.htm". If you type "filename.adi", you get
>"filename.adi.htm".
>
>DO NOT select "Web Page complete" ... select all file types and
>leave the file name alone: "lotwreport.adi"

That's the problem - if you don't have an action associated with .ADI
files, IE changes the ".ADI" to "_ADI" - that's why it's not working
for some of us. Perhaps your logging program grabs ADIF files by default.

>If necessary, select file type as TEXT.

That doesn't work - you get lotwreport_adi.htm.txt, which you then need
to rename after you save it - that's what we're trying to fix. IE, in
the absence of a known file type for .ADI files, decides that the
report is a HTML file and always adds '.htm' to the filename.

> > This is because of an Internet Explorer bug. The problem is that LoTW
> > is sending a file of MIME type "application/octet-stream".
>
>No bug with IE ... you have IE and/or Windows misconfigured.

See the article above. Definite bug with IE. (Trust me here - I've worked for years on HTML firewall proxies that have to work around what browsers do. I know what I'm talking about.) Not having windows configured to know what a .ADI file is is NOT a misconfiguration.

> Find an ADIF file (.adi),
> right click on it
> select "open with"
> select "choose program"
> choose "Notepad"
> check "always use selected program to open this kind of file"
> click "OK"

That worked around the bug for me. Regardless, LoTW is sending a binary file, marking it as such, and IE decides to display it because what looks like a HTML tag appears in the first 256 bytes - *that's the bug in IE.* Requiring users to take additional action to tell the browser to not screw around with this content is wrong. Compliant browers do the right thing without being forced to do so.

I was trying to help the LoTW developers understand how to work around the bug. Asking everyone using LoTW to associate .ADI files with notepad isn't very user friendly. Adding a few hundred bytes to the front of every report might make this problem transparent to everyone by moving the first HTML-looking tag past the boundary.

If LotW would identify the file as text instead of binary
IE would allow it to be downloaded rather than display it as
HTML.

Well, one possible workaround (if the <PROGRAMID:4 is significant) would
be to include some text header followed by <EOH> as allowed by ADIF.

How so? If you use type text/plain, any browser will display it without
evening offering you the option to download it.

There is *no* standard requirement for how a program is to handle mime content-type application/octet-stream. There is, in RFC-2046 (4.5.1) a _recommendation_ that a program offer to save octet-stream data as a file *or* {well, I'll let you look up the alternative suggested}.

A more consistent use of MIME types by the LoTW group would have been to invent a mime type "application/x-lotw-adif" or some such and then to register an application to handle mime data of that type during the TSQL install. One might go so far as to read RFC-2048, and register an LoTW adif content-type.

The assertion that IE looks at the binary and "sees what looks like a HTML tag" in the first few characters is an imprecise description of how IE handles octet-stream.

http://msdn.microsoft.com/library/default.asp?url=/workshop/networking/moniker/overview/appendix_a.asp

gives an accurate description. In particular, item 6 describes the scan used to determine how to process ambiguous types. Including text headers wouldn't make a difference, as IE is not looking for HTML, it is merely checking for printable characters.

In this particular instance, IE is not broken. The standards, such as they are, are ambiguous; IE is within standard, and LoTW is not following best practice for new data types. (Starting with giving a binary mime type to a text data file.)

None of the TQSL applications reads the downloaded ADIF files, so
there'd be no benefit in that.

[...]

Well, what would you suggest? text/plain is clearly not useful because
any browser would display it in plain text format.

RFC 2046 says application/octet-stream indicates that the file body
contains "arbitrary binary data", of which text files (including
ADIF files) are a subset. It recommends simply allowing the user to
save the file to disk.

It does not recommend trying to guess what type the file might be.
IE should not do that - it should expect the HTTP server to be
configured correctly. HTML files should be sent as text/html.

Microsoft applications have a habit of trying to work around problems
where they shouldn't. IE will deal with URLs containing spaces for
example; of course spaces aren't allowed and an encoded format should be
used (ie %20 for spsace). Thus people write broken web pages which
happen to work in IE but don't work in standards-compliant browsers.

> to my QSL manager who does not require my sending him photocopy
> of passport and license by snail mail.

Does anyone know what standard/documentation ARRL/LotW requires of a QSL manager in order to obtain a certificate for a station he/she might manage?

For those DX stations with a traditional QSL manager, I don't see why the manager couldn't upload logs in any case ... for others, perhaps one way to deal with the requirement for documentation for foreign amateurs is for US (and other) registered individuals to serve as "on-line QLS managers."

The US station could use his/her certificate to sign the certificate request for the DX station. The DX station could send logs to the "electronic QSL manager" (signed with PGP or some other unique ID), the "on-line manager" could then convert the log to ADIF (if necessary), sign the ADIF and upload it to LotW.

Although I do not have the time & resources to act as a traditional QSL manager, I would certainly be willing to act as an on-line QSL manager if such were possible.

Topic: 1279 Message: 1279

I would surely like to see the ARRL's response to the idea of authorizing IARU member societies to approve certificates for stations in their jurisdictions. It wouldn't have to be a blanket authorization for all IARU member societies; ARRL could reasonably require that the societies set their systems up in an acceptably secure way, paralleling the ARRL/FCC database ties-in. Are we really suggesting that DARC, RSGB, REF, JARL et al can't do this job?

How about it, ARRL?

All,

Thanks....I am able, through some renaming, to use the .html format.
We should, however, have the process for renaming documented, so
others will not have the same problem.

I can't believe how many people responsed..and I, and others for
sure, are greatful. The responses, other than "gee, it worked for
me!" were very, very helpful!

Let's hope that LOTW finds a way of linking the application process
to real time credits. It is amasing to me that the LOTW must pass
off the info to the DXCC desk in order for th "credits" to be
offical.

LOTW is the way to go....but it has a way to go!

1281. RE: [ARRL-LOTW] Download ADIF Problems

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-21 21:39:52 UTC
From: Martin Fouts
Topic: 1242 Message: 1281

I am amused that you cut my suggestion out and then asked what I would
suggest. Here's yet another suggestion:

I suggest that people other than LoTW routinely make it possible to download
text-files via web pages. If LoTW doesn't wish to go to the trouble of
registering application/lotw-adif (or whatever they want to call it) then I
would suggest that the simple act of modifying the web site to use one of
the common approaches would be most suitable.

(By the way, IE is not treating the adif file as if it were text/html. It
is treating it as if it were text/plain -- which, in fact, it should be.)

That the adif file is indended for download, but presented in a form that
does not require file-saving by the browser, is not Microsoft's fault -- it
is poor design on the part of LoTW. Complaining about Microsoft neither
fixes the design, nor solves the user's problem.

Well, what would you suggest? text/plain is clearly not useful because
any browser would display it in plain text format.

[... RFC 2046] does not recommend trying to guess what type the file might
be.
IE should not do that - it should expect the HTTP server to be
configured correctly. HTML files should be sent as text/html.

Microsoft applications have a habit of trying to work around problems
where they shouldn't. IE will deal with URLs containing spaces for
example; of course spaces aren't allowed and an encoded format should be
used (ie %20 for spsace). Thus people write broken web pages which
happen to work in IE but don't work in standards-compliant browsers.

I understand that the League folks will be fixing this using what
Martin Fouts suggested - using a MIME type other than text/plain.
Hopefully this discussion contributed to the fix.

I am the manager for both a current operation from a DX Country active in DXing and
contesting.
And
A number of long since inactive operations but from so medium rare entities.

For both, I've uploaded the logs to LoTW.
For the long since ended operations, the fact that these were well known operations and
were previously managed by a person now passed on, made them easily certifiable by LoTW

administrators.

For the current operation I manage, the operator provided LoTW administrators with copies of his license and proof of his residence.

For the long since ended operations this presented no problems.

But if I had it to do over again, I would have had the current DX station obtain his own certificate.
Only because now he will have to submit for awards and credits the long way around.

I will suggest that if the DX station has internet capability, persuade him to obtain his own certificate and upload his logs directly.
This in no way limits your ability to handle qsl card requests.

1284. Account Status Table confusing.

Yahoo group: ARRL-LOTW (2003 — 2007)

Topic: 1284 Message: 1284

Can someone explain EXACTLY the definition of every item in the Account status Table for awards. For instance the most confusing is TOTAL/CURRENT. I thought it meant all my QSLes in the linked account minus the deleted entities, but no. My current id TOTAL - DELETED +1 so that is not it?

What does applied mean? I have applied for all of my LotW credits but they have not been actually credited yet so why does it show as applied? I am assuming these credits are for awards not applied for yet and are telling me what is available. I assume that includes the entire linked account. I have ZERO in all the AWARD column except Mixed since my original submission was 34 years ago and they did not keep the records.

Again, the exact relationship between Awarded and Total/Current needs a definition and the Applied needs a definition.

I could not find this in the FAQ.

If you have a hardcard submission sheet that the DXCC desk returns to you with your cards, it shows CURRENT/TOTAL.
That should explain it.

You received an answer, but apparently you do not understand the current DXCC rules.
Total countries refers to the your total of current and deleted entities.
Deleted entities are not counted towards DXCC or Honor Roll, but are included in the Total (that word again)
Current countries are those entities that have not been deleted and are eligible for the awards program.
see http://www.remote.arrl.org/awards/dxcc/ for the DXCC rules.

I thought that was it but as I stated, I have 8 deleted entities but my current is just 7 less than the deleted. That seems to say that one of the deleted entities is being counted. That is why I asked for an explanation. I do understand the rules, I don't understand what is happening here.
I also think that any table, list, etc, ought to have a full field by filed explanation for stupid people like myself that can't figure it out without documentation, what a concept!

From: Joe Subich, K4IK
Topic: 1284 Message: 1289

> Can someone explain EXACTLY the definition of every item
> in the Account status Table for awards. For instance the most
> confusing is TOTAL/CURRENT.

Selected: LotW confirmations that will advance an award. This
is generated by the LotW computer based on your current
awards credit/status

Applied: The number of LotW Confirmations that you have included
in pending applications.

Awarded: Your current "all time" total as recorded by DXCC

Total: Awarded + Selected

Current: (Awarded + Selected - Deleted) or (Total - Deleted)

> I thought it meant all my QSLes in the linked account minus
> the deleted entities, but no. My current id TOTAL - DELETED +1
> so that is not it?

You probably have one fewer deleted countries that you thought.
Look carefully at the "Award Credit Matrix" to see exactly what
the DXCC desk on record (i.e., "awarded").

> What does applied mean? I have applied for all of my LotW
> credits but they have not been actually credited yet so why
> does it show as applied?

See above ... you have made application (used the credits) but
they have not been awarded yet.

> Again, the exact relationship between Awarded and Total/Current
> needs a definition and the Applied needs a definition.

It is rather self-explanatory ... the only thing confusing is
that your records don't match those of the DXCC desk.

From: rojomn
Topic: 1291 Message: 1291

By the way Joe, I had it correct in the first place but counted wrong. I counted only 7 deleted credits. If I had known for certain the definition I would have looked more times before wondering what was missing. Thanks again.

Joe, THANKS greatly for the explanation. Perhaps you could get it in the FAQ. Thanks.

1292. if you made an error?

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-23 02:10:29 UTC
From: FireBrick
Topic: 1292 Message: 1292

Let's see guys.
If someone gave you a simple, correct answer to your question.
but
because you made an error in math,
you accused someone of sending a "short sardonic
(scornful or cynically mocking) reply."

would you apologies after the error was recognized????

ah nevermind....
consider the source.

FATAL ERROR! SYSTEM HALTED! - Press any key to do nothing...

From: n2tu
Topic: 1293 Message: 1293

After I successfully uploaded all my logs to LOTW initially, the upload LOTW functions does not work...

Here's how I did it in the past...I did a selection of my first QSO and my last....then Set the Upload Flags...then Export for LOTW...all went well...and my ADIF file was created and the upload date field got populated.

Then I tried to upload my more recent QSOs...those made after the initial upload....

I used the exact same procedure...set my selection...set the upload flag...and Export for LOTW...the export seemed to work but the ADIF file was blank...and the upload date field never changed.....

I've tried just about everything...but to no avail....

On the other hand if I do a Database Export as we did pre 6.03, all worked naturally. If I do a Database Export function rather than the Export of LOTW, the ADIF file is created normally...just the Upload date field is not populated...

What am I doing wrong?

All,

Problem solved!....

Wendell Wyly W5FL told me to check the Import/ Export window to make sure there were no other files listed above the ADIF entry. Sure enough there was a blank!

I changed my preferences to Expert, deleted the entry...and all worked FB...

Many thanks to Wendell!

1295. My First LoTW submission was a success

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-26 22:07:10 UTC
From: FireBrick
Topic: 1295 Message: 1295

I was fortunate enough to gain 27 band/modes via LoTW that I'd never been able to obtain qsl cards for.
I submitted a LoTW DXCC submission when the awards module went active.
Today I see my application of May 6th showed a status of 'Finished'.

I checked 'Your Account' and did not find any messages saying that the application was accepted nor any sort of summary.
Although the Account Status seems to show the increase in Challenge totals.

12007 qsl's as of today.
I've seen a increase in the number of qsl's the past few weeks/days.

As Perry Como used to say "Keep those cards and letters coming".

Man has his will. Woman has her won't!

1296. Satellite LoTW question

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-05-28 00:49:21 UTC
From: William H. Hein
Topic: 1296 Message: 1296

I uploaded about 100 satellite QSOs to LoTW yesterday (several hundred to go, I have to enter them from paper logs into Dxbase 2005 first). Here is one of the ADIF records from the file I created under DXB's Selection Wizard:

<CALL:5>3A2MD <QSO_DATE:8>19941228 <TIME_ON:4>2040 <RST_SENT:2>53
<RST_RCVD:2>53 <QSL_VIA:8>Direct$$ <TX_PWR:3>100
<ITUZ:2>27 <OPERATOR:5>AA6TT <PFX:3>3A2 <QSL_RCVD:1>Y <DXBQSL_RCVD:1>1
<NAME:5>Laura <FREQ:9>435.50000
<BAND:4>70CM <CQZ:2>14 <GRIDSQUARE:6>JN33RR <SAT_NAME:5>AO-13
<PROP_MODE:3>SAT
<MODE:3>USB <QSL_SENT:1>Y <DXBQSL_SENT:1>1 <QSLRDATE:8>19950530
<COMMENT:6>mode B
<DXBPFX:2>3A <DXBMGRN:1>1 <DXBAWD:1>0 <DXBSEL:1>0 <DXBVAL:1>3
<EOR>

Here is the QSL match from LoTW for that QSO. Note that LoTW has set Receive Band to 70CM, which is of course incorrect.

Station
Call Sign AA6TT
DXCC UNITED STATES OF AMERICA
CQ Zone 4
ITU Zone 7
Grid DM67FB
State CO
County LA PLATA

Worked Station
Worked 3A2MD
Date/Time 1994-12-28 20:40:00
Mode SSB (PHONE)
Band 70CM
Frequency 435.50000
Receive Band 70CM
Propagation Mode SAT
Satellite AO-13

Record ID 43360639 Received: 2004-05-27 02:34:42

Note that the Receive Band field says 70CM, which is of course wrong (mode B downlink is 2M). How did this happen? All of the satellite QSOs I uploaded to LoTW from DXB have the same error.

1297. RE: [ARRL-LOTW] Satellite LoTW question

Yahoo group: ARRL-LOTW (2003 — 2007)

From: Patton, David NN1N
Topic: 1296 Message: 1297

Hi Bill

The receive band is set to equal the (transmit) band if the receive band

is not supplied in the ADIF record. For satellite contacts, this doesn't

matter. See:

<https://www.arrl.org/lotw/faq#datamatch> https://www.arrl.org/lotw/faq#datamatch

1298. received today; Lotw Summary Sheet, GM5A

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-01 18:27:27 UTC
From: FireBrick
Topic: 1298 Message: 1298

FIRST THE QSL.
GM5A via GM0RLZ sae/gs sent Mar-3-2004
for a very difficult 80 cw qsl. Thanks guys.

and then
I was wondering what kind of acknowledgement I'd get
after a LoTW submission.
Today I received the same type summary sheet you receive
as if you had submitted a qsl card DXCC submissions.

Thanks guys.
Only thing, I wish there was an easy way to print out the
callsign, and it's info of LoTW qsl that LoTW says you can
submit for credit.
I did it the hard way and handwrote them.
Maybe I'm missing something obvious

Not sure of your question but if you're wanting to print and of the LOTW records in the awards section, the way I do it is :

- Highlight the text in the report.
- CTRL C to copy
- Open MS Word (or any other WP)
- Paste the copied text into the WP (CTRL V)
- Print

The report you print will be exactly what you see on the WEB page report including lines and colors.

Hi:
Previously when I checked my K1VU "Account Status" for DX Chalange
the "Total/Current" column showed 41/41.

Since I received a QSL from DF3GY the "Total/Current" column shows ---/42 .

The same is true for my WA1OFR account.

What does this indicate ???

Hi:
According to the guys who talked to Wayne Mills at Dayton, WAC and WAS are next.
They didn't ask about VUCC as the are HF'ers only.

No time schedule given, but I think WAC should be an easy one to implement quickly !!!

WAS shouldn't be to difficult as much of the basic work was done for DXCC.

From my discussions with Staff at Dayton, the issue is one of time and programming resources. The one individual who does the bulk of the internal software development had to spend more time than anticipated on the DXCC program (due to the ancient system on the DXCC side) and has some other, higher priority, tasks elsewhere that must be tacked before spending more time on the awards programs.

However, Bob is right ... since WAS has no honor roll, no endorsement structure, and a much less complicated record keeping requirement, it should be much easier to implement.

73,

Bob,

This appears to be a change in how the Challenge numbers are presented.

Mine used to show 1688/1688 and since I've done an application (and it's been processed) it now shows ---/1835.

This makes total sense as the Total/Current column indicated Total (including DELTED) and Current (NO DELETED) and the Challenge does not include deleted countries.

1305. Hard to QSL DXCC Entities

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-04 18:47:02 UTC
From: Gerry Hohn
Topic: 1305 Message: 1305

I am going though a "QSL Chase" trying to get QSLs from a number of entities that have problems with mail not getting through. I've exchanged email with a number of these that confirm my QSO but also confirm that my various "stealth" mailing attempts have not met with success. Most of these outstanding QSL don't seem to be "green stamp collectors" and simple ask for an SAE with an IRC or GS to cover the costs.

Clearly th LoTW would be the perfect vehicle to obtain these confirmations. Since the LoTW appears to have hit a plateau and the number of new DX users does appear to be increasing much, there may be a need for the ARRL to promote this tool more in the rest of the world (as per some of the previous discussion on language and presentations.

What was going though my mind was that maybe the ARRL could take a more proactive role (may it easy to sign up, offer assistance, etc.) in getting QSL managers and high volume operators in these problem countries to ustilize the LoTW to elleviate the mail problems.

Thanks for the new one(s) on 4 bands! That's the first progress I've seen on my stats for some time. A big round of applause is in order! Now if we can just locate another 700 logs and get them into the system too!

I just worked 7X4AN (again) on 40M tonight. I cannot tell you how many green stamps he's got of mine. Only one 20M QSL after all the effort. Admittedly, Albania is a bit backwards. But Come On Mohamed! I'm trying to put my kids through college too!

Many thanks, I got nine "hits", the first in a while. It seems that LoTW use has slowed down since DXCC was added. go figure!!!

Jim

I've received, transcribed, and uploaded the latest YO3APJ logs through May 2004.

I will ALWAYS answer hard card qsl requests, but you can save time and money be joining LoTW and getting your qsl credits there.

I still have approx. 150 pages of 9X5AA logs to transcribe and upload.
Those are tough, they eyes ain't what they used to be. :-((

Actually, I think it's gained momentum.
I'm at 12K+ qsl's, and a lot of that has been post DXCC award roll out.

Now admittedly the US qsl's outnumber the non USA.
But I've seen increases in those also.

Out of close to 7K submitted QSO's, I have only 166 confirmations :<(

A long way still to go if this is going to be at all useful.

Still have logs that I have not computerized, may not be worth the effort.

1313. LoTW BUG!

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-07 14:14:07 UTC
From: Gerry
Topic: 1313 Message: 1313

Folks,

You may want to keep an eye out for this problem. I reported it some time ago but it appears to still be an issue.

With the reposting of the YO3APJ logs (they had, at least partially, been posted to LoTW once before some time ago), the following happened.

I had aplied for LoTW credits several weeks ago (including YO3APJ on 17 and 10 meters) and they where applied last week to my DXCC record. YO3APJ showed as comfirmed in my on line DXCC Credit Matrix for 17 and 10 meters and in the band specific listings (bold).

Today, when I check my LoTW status and on line DXCC record it shows that these QSOs are selected and available to be applied for for credit (again).

If I check the detailed DXCC credit matrix, it shows these are already confirmed and credited.

It appears that when logs are reloaded to the LoTW, the system doesn't recognize that this is not a new upload and that credits have already been applied.

The good news is the DXCC Credit Matrix is right.

Interesting!

I just logged on again and the problem has gone away.

All is as it should be.

Just to be clear, the first log on was from "start up" so it wasn't a "refresh" issue. I may have been a Data Base synchronization delay between the LoTW and DXCC systems.

My results are 556 confirmations out of 30K QSOs (about 1.8%) so you're doing just a bit better than I am.

> Still have logs that I have not computerized, may
> not be worth the effort.

Breaking down my results between my current QTH and the old contest logs shows 483 confirmations out of 3300 "current" QSOs and only 71 confirmations out of 27K "old" QSOs. I still have a few small contest logs to enter and I□m searching for a couple large multi-op logs that seem to be missing. I'm not sure that I would have started entering all the old logs if I had any idea the confirmation rate was going to be only 0.25%.

BTW, the confirmation rate for the same "old" logs on eQSL is almost three times greater ... still a very disappointing rate of less than 1% (every QSO I upload to to eQSL includes the comment "Please QSL via ARRL Logbook of the World").

Topic: 1316 Message: 1316

Was just reading Carl, VE9OV's comments re results. I for one am quite impressed at how well LOTW seems to be working. Daily I am seeing new matches, granted lots of them US matches but more and more DX stations seem to be coming onboard. For 50,518 qso's as VE9DX, I now show 6,686 matches.
Honestly I have never been one to chase awards but with the simplicity of LOTW... this is going to change.
I say hats off to the those at ARRL who worked this through. Great job.

Out of 18244 submitted Qs here, there are 690 QSLs, thats 3.78% return.
QSLs go back 1979 with the lion's share year 2000 and later. Spread is as
follows:
1979 1
1980 0
1981 0
1982 0
1983 1
1984 0
1985 1
1986 1
1987 1
1988 3
1989 2
1990 6
1991 5
1992 13
1993 13
1994 0
1995 1
1996 16
1997 6
1998 21
1999 42
2000 154
2001 151
2002 54
2003 147
2004 52

1323. LoTW Certificate breakdown by DXCC country

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-10 20:34:52 UTC
From: Patton, David NN1N
Topic: 1323 Message: 1323

Hello all

Just for fun, following is a breakdown of number of certificates issued to callsigns from 242 DXCC countries, including deleted countries. A good many of these certificates are issued to US stations who have QSL manager duties, or operated from outside the US. There is of course plenty of room for expansion and we will continue to work on that.

73, Dave, NN1N

Yes... I think I know how to filter my log by the callsign I used when I made each QSO. With help from Bruce KD6WW and others I have somehow managed to actually get certs set up for my current and prior callsigns!! What I'm wondering now is whether I do actually have to send a separate log file for each callsign, signed with the cert for that callsign... that sounds reasonable, but is it correct? 73, Jerry K3BZ

Subject: Re: [ARRL-LOTW] Stuck at the Post Card

You will need to get certificates for the other callsigns. I do not know
that you can send in a single log from 3 callsigns, I have not tried it. I
used a different certificate for each call sign to sign the log associated
with that call sign.

Can you break the log into three parts easily?

Bruce

1325. LoTW and DXCC Data Base Syncronization

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-12 21:47:11 UTC
From: Gerry
Topic: 1325 Message: 1325

Fellow Users,

You should be aware that there is a time delay in the Syncronization of the LoTW data base and your DXCC credit records. I've been told that this happens nightly so in the interim between when a new credit appears on the LoTW system and it's validated aganst the DXCC records, it mat take upwards of a day.

As an example:

Today a LoTW RTTY confirmation appeared for CX2AQ. This shows as a "selected" QSO in the awards section of LoTW but when one looks at the DXCC record under "view award credit matrix", my record show this as a confirmed credit.

I expect tomorrow morning it will all be as it should be.

Gerry,

1326. DXCC credits synchronization with logger applications

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-18 13:27:35 UTC
From: Art RX9TX
Topic: 1326 Message: 1326

Hello ARRL-LOTW,

Again a question concerning synchronization of LoTW DXCC credits
records with the logging applications, for the DXCC statistics
purposes. I hate correcting it manually :)

DXCC staff addressed: any plans for that?

1327. Timing on Cerficate mailing vs processing on LOTW

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-18 23:19:48 UTC
From: Ben Coleman NJ8J
Topic: 1327 Message: 1327

```
-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

I've finally gotten my initial mixed DXCC done, a 'mixed' application:
99 cards and 4 LOTW credits. I did the LOTW application on May 31, and
had my cards field-checked at the Atlanta Hamfest on June 5. I notice
that today I received my certificate and pin in the mail, but LOTW still
shows my application as 'in process'. Somehow I expected things to
happen in the opposite order: I'd see the LOTW application finish before
getting the cerficate in the mail. Perhaps the certificate is mailed
out before the contacts are logged in the DXCC system?

BTW, when I got the certificate, I figured that maybe I need to link
LOTW to my new DXCC, and went ahead and did the Link Account bit. When
someone gets a new DXCC via LOTW (or via a mixed application), do they
have to do the linking, or is that going to be done as part of
processing the DXCC app?

1328. Certificates for awards

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-18 23:41:57 UTC
From: gbaron
Topic: 1328 Message: 1328

I got my cards back today and credited with 2 additional awards. I did not get certificates or stamps or any other acknowledgement other than the list. Should I and how do I correct this? I did send an email to ARRL dxcc@a... I think.

They listed the entities but not the call signs of the credited cards. They used to do that on the paper sheet. Is there any way to find the call signs for which I was credited including those from WAY back in 1970?

I don't mind paying but I did NOT get the certificates and I DID pay 20
bucks, 10 for each certificate I should have received.

> understand.). To get current mode/band credits for old 5B
> DXCC and other old contacts you must cycle the QSOs thru the
> HQ or conventions with HQ present to get the specific credit
> you seek. I only have another 600 cards to cycle thru the

Just what I did, sent the cards and for the most part I THINK I got
the credits. I am furious that they did NOT tell me which card got which
credit since they included ONLY the entities credited in the report. That is
careless and there is no excuse for that with what we pay.
Those calls are right in front of them when they checked the cards and they
ought to be included!
Even my old PAPER report from 1970 had that!

On top of that, nobody from ARRL had replied to my query yet either. You
have done way more than those I paid my 70 bucks to did. AT LEAST , I got
the award credit, although I have no paper work to prove it, NOT EVEN the
stickers!

I suppose I should chill out but after a 2 month wait I am a bit steamed.

1330. Eqsl Disclaimer & LoTW plug !!!

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-22 20:59:59 UTC
From: R Johnson
Topic: 1330 Message: 1330

Hi:
While I played with Eqsl before LoTW came into existence, I always wondered how many "REAL" QSL cards I was loosing from Eqsl.

After LoTW came into existence, I wanted to have my QSL's useful for awards.

The first thing I did with Eqsl was NOT to apply for an "Authenticity Guarantee" (AG) Certificate. I did this hoping the to render the QSL's useless for other than the fun aspect.

After talking with a number of other HAMS, I found that they thought the Eqsl's were good awards and were printing them out for such.

After finding no way to remove my QSL card from Eqsl and still be able to "Play" with Eqsl for "Grins & Giggles" I finally came up with a possible solution.

In the Eqsl card design, the give you 4 lines of free text in addition to your Callsign, name and address, Grid Zones and 1010#.

I set the 4 line of free text to:
Line 1: (Left BLANK for seperator)
Line 2: This is NOT a VALID QSL Card
Line 3: No Eqsl's Accepted for ANY Awards
Line 4: Please Respond via DIRECT, BURO or LOTW

If this works I'll be able to get QSL conformation in the order I want them.
1- "Real" QSL's direct or via the BURO (useful for all awards)
2- "Electronic QSL's" via LoTW (useful for some awards for now)

My other option was to just quit Eqsl as they provide a method to do that, but then I couldn't play.

I don't know if this is going to help my QSL return count or not, but it can't hurt.

If any of you have Eqsl's with me as WA1OFR or K1VU, take a look and let me know what you think.

73

All I can say is that the only thing you have done is to clog cyberspace with more gibberish. Without the AG, your eQSL is truly meaningless for ALL awards, even the ones eQSL offers. Lots of guys are collecting states, counties, grids, and other goofy stuff that makes no sense to me but means a bunch to them. And you cannot do that with LOTW. They have lots of awards, but your log is meaningless until you get AGed. You cannot even see YOUR progress. I don't get it.

Why would you NOT participate in eQSL? They don't count for DXCC credit, but there are LOADs of guys and gals chasing eAWARDS. You cannot chase WAS or VUCC or COUNTIES or GRIDS on LOTW. You likely will never be able to get those on LOTW. But they are doing it on eQSL. It is purely personal satisfaction for the recipient of the eAward anyway.

Nice try. But it won't work. Nobody actually prints those eQSL cards, or even reads them. The only thing important is matching the Qs automatically for "E" awards credit.

>
> My other option was to just quit Eqsl as they provide a method to do that, but
> then I couldn't play.

And you would continue to ruin it (you are not AGed) for those that are playing in both eQSL and LOTW. My inclination is that a VERY high percentage of eQSL users are people just like you that upload their logs to both places. But YOU cannot see YOUR progress until you get AGed.

I just faxed them my latest FCC license a long time ago. It took me about 3 minutes and has not slowed my direct QSL count one little bit.

>
> I don't know if this is going to help my QSL return count or not, but it can't hurt.

And neither will being AGed.

>

> Bob, K1VU

I participate in LOTW and am a big supporter of the ARRL's efforts in this direction. But I have never understood the angry bias against eQSL and those that use it. I just don't get it. DXCC has a great tradition in ham radio. A tradition that should not be tainted by relaxing the rules one little bit. The other awards are not as meaningful to you and me, but they are very meaningful to the new hams that are finding it a big chore to bag a WAS. Most contesters do that in the first 24 hours of a domestic contest. But if you are a newbie running a 706 into a outbacker tied to the hand rail of your 3rd floor apartment, it is a BIG deal.

I would encourage you and the rest of the Award Bigots to go ahead and get AGed on eQSL, upload your logs, and let these folks play ham radio too... Getting AGed does not change your alliance with the ARRL and the true DXCC program, it does not slow your QSL rates, it does not inhibit your ability to play in LOTW. I do not even view eQSL as a competitor to LOTW. They have a different program and a similar audience, but that is it.

My $0.02

I agree. I am a huge supporter of the ARRL and LoTW, but that is not to the exclusion of other awards, activities or promoters. All of these activities help HAM RADIO!!!!!
I am not interested in E-QSL awards, but many hams are. I got my "AG" some time ago and regularly upload QSO's to E-QSL.

Dissing E-QSL will not help LoTW. Look at the country statistics than N1NN posted a few weeks ago. The problem is a lack of participation by non-W/K hams. We need to encourage them to see the benefits of enrollment. Also, we need to encourage the ARRL to add more awards to LoTW.
WAS would probably encourage non-W/K hams to sign up and links to other awards would help.

I really want to see GRID SQUARES for VHF added, but I will be patient.

Jim

All I can say is that the only thing you have done is to clog cyberspace with more gibberish. Without the AG, your eQSL is truly meaningless for ALL awards, even the ones eQSL offers. What you are saying is not true. You need to go here and read:

http://www.eqsl.cc/qslcard/OrgBB.cfm

The reason eQSL's are not accepted for ARRL awards is a "not invented syndrome" at the ARRL.

I agree also, I support ARRL and LOTW as well as eQSL and I do paper. We should be here to help other hams with the many varied aspects of the hobby and awards, not try to drive people away from whatever turns them on. Different strokes...

If you are going to rant and rave you might are well get it right. The term of art is "Not invented here" syndrome.
As someone said "for every complex problem there is a simple answer, and it is usually wrong"
I'm sure that "NIH" is part of the ARRL reason, but the cost and effort necessary to develop the system would mitigate against would make it more than a small part.

The integrity of the ARRL awards system is paramount. While we may argue the methodology, but we can't argue that they achieved the result.

Jim

What you are saying is not true. You need to go here and read:

http://www.eqsl.cc/qslcard/OrgBB.cfm

The reason eQSL's are not accepted for ARRL awards is a "not invented syndrome" at the ARRL.

Well, I can see from the link that there are no less than 60 organizations that accept eQSLs for the awards they offer. And the link at the top of the page describes the efforts expended in an attempt to satisfy the ARRL DXCC rules. Further, they have gone back to a more relaxed approach to matching QSOs for eAwards.

So your 'not invented here' comment is valid, but misplaced. DXCC was invented at the ARRL, not eQSL. And the traditions surrounding DXCC cannot be truly replicated on-line by either eQSL or LOTW. The Staff at ARRL does a great job at processing lots of information and is jealously protecting the integrity of DXCC. I cannot fault the ARRL for jealously protecting those that have achieved what all of us can attribute to being very difficult to attain.

From a marketing standpoint, LOTW is going to be a tough sell without the rest of the awards being available for credit. I can personally attest to the fact that my JA QSL requests have all but gone away now that my log is AGed at eQSL. Those folks are passionate about paper on the wall. For a while, I was thinking of applying for the 'Worked All JAs" award. My buro decks were about 70% contest JAs. They were collecting counties.

Makes me wonder if the ARRL could charge a subscription for people to track all their awards like we are now enjoying tracking DXCC. My hunch is that lots of DX would not subscribe to a magazine they cannot read, but they would subscribe to a database like none other in the world! ARRL? Are you listening?

The integrity of the ARRL awards system is paramount. While we may
argue the methodology, but we can't argue that they achieved the result.

The ARRL's integrity is no more paramount then eQSL. I can cheat just as
easily on one as the other. As a matter of fact, I had a ham provide me
an invalid confirmation, on LOTW, although it was unintentional..

I just logged into eQSL for the first time in weeks. An interesting message popped up...

"* Thanks to the SDXG (South German DX Group) for hosting a presentation on eQSL.cc by Dave N5UP on May 22. Photos here"

This is marketing folks. Promote or perish! Dave's doing it! We, as a US/VE community, have got to figure out ways to get the LOTW message into the hands of the DX public before we are going to see wide acceptance of LOTW around the world.

WAS, VUCC, Grids will all be supported on LotW eventually. That had already been announced. Further, ARRL and CQ have been in discussion about making use of LotW for CQ awards.

What that happens LotW will be useful for recognized awards beyond DXCC. Until eQSL strengthen their QSO matching system to prevent fraud, I will personally not recognize any award that accepts eQSL "confirmations" without requiring some other independent means of verification.

Absolutely not true ... I regularly reject (and have had rejected) invalid QSOs on eQSL. I have also received eQSL "confirmations" for QSOs that had been "rejected" as "not in the log" when I attempted to get the "real" card.

I have never received a LotW confirmation for an invalid QSL ... the benefit of a double blind system.

> As a matter of fact, I had a ham provide me an invalid

The only way that can happen is if the two of you make the same mistake independently - or if the two of you conspire to upload the same non-existent QSO data.

Lotw is a far more robust and secure system than eQSL. eQSL.cc had an opportunity to adopt a double blind system and require public/private key encryption to secure the data and they refused. Seems to me if they did not chose to adopt the security and validation standards that ARRL required, they have no reason to complain about the NIH syndrome.

I gotta agree with you Joe.
I think your right on target.

Two people making almost identical date/time/band errors CAN happen.
But not too likely.

1343. Eqsl, LoTW, & CQZ Quandry

Hi:
An "Interesting Development" !!!

After my earlier post today on Eqsl, I did some prowling around the Eqsl site.

Much to my surprise CQ is already accepting Eqsl's for the CQZ Award !!!

This puts a whole new light on Eqsl !!!

Check on your "Standings" for the eWAZ Award and scroll to the bottom of the list and you will see a button "Submit to CQ". You check off the EQSL's you want to use and then send them for credit. NO CHARGE mentioned !!!

I sent one of my 10M Zone 33 Eqsl's as a test. Worked FB !!!

I guess I have to rethink how I do things now !!!

Wonder how I'll get these Eqsl's into LOGic !!!

What a nightmare this is going to be keeping track of Paper, LoTW, & Eqsl QSL's for these awards.

Looks like Eqsl scooped LoTW on the CQZ Award !!!

Probably just as well as about 40% of my LoTW QSL's are bad for anything other than DXCC !!! Had missing CQZ, ITUZ, Grids, US Counties, and bad IOTA formats.

Sure wish LoTW would force people to include ALL of their "Station Info" in the TQSL setup so their LoTW matches would be worth something !!!

Do it Right, and do it Once !!!

But will eWAS, eVUCC, eWAZ, and others be supported? I doubt it. They are different awards with different sponsors. And lots of folks collect them.

Well, you might as well tear up your CQ awards. I just went to the bottom of my eWAZ document and there was a button, which if pressed, submits all of the zones I have confirmed with my eQSL account to CQ Magazine. Most of these non-DXCC awards are linked in this fashion. Are you going to tear up your CQ awards? If so, please report this. I seriously doubt you will. Why? Because you worked hard for those awards. If you didn't cheat, you know it. If you did cheat to get it, then your personal satisfaction derived from having the CQ WAZ award would no doubt mean you were indifferent to tearing it up anyway.

Look, I'm not advocating that ARRL accept eQSL's methods. That is a dead discussion for many good reasons. Trying to twist what I'm advocating is hardly fair. All I'm describing is that the enjoyment of ham radio is being damaged for many decent, non-cheating hams because LOTW snobs have boycotted eQSL for reasons that completely escape me. There is not ONE valid argument for the eQSL boycott. eQSL are different awards. ARRL doesn't need to accept them, and neither do you. And just because somebody chases counties or zones and uses eQSL does not mean they have cheated and lied their way to get it. It's a personal thing, and very rewarding for many hams.

Besides DXCC, there really is no formal reporting of "who's who" for most awards. The ranking is an exclusively DXCC thing to my knowledge, which gives the owner some braggin' rights. So besides DXCC, ALL awards are simply a personal thing. Anybody stupid enough to cheat to get one of those awards is stupid enough to cheat at solitaire, which makes a challenging game just a complicated card sorting method.

It seems to me, if Dave at eQSL has figured out how to submit credits to these other awards, like WAZ, with the click of a button, then ARRL should be able to figure out the link too. And collect fees in the process! I'll bet it is as simple as just asking CQ what format and information they want contained in the email. Ditto for the various State's QSO parties, and dozens of other Domestic and DX Clubs.

Holding out because the methods don't meet your personal standards means you are boycotting the sponsor of the award. Kinda backwards logic isn't it?

Of course, we shouldn't point out that eQSL will tell you about where and when the DX station has you logged so that you can conveniently confirm it and then send that QSO information to LOTW and get a DXCC credit for it...

eQSL isn't double-blind and in the process lowers LOTW's security level.

We should discuss the complete inability of eQSL to deal with one call shared between a couple of locations.

Boy you have me confused. I didn't think you HAD to pay for any.
Except those you specify you want to apply for credit.
Which is the same thing as paying for a hardcard you sent to DXCC desk.

Or am I missing something obvious here????

May all your family trees branch toward the stars!

I am not aware of the ability to get one side of the QSO until there is a match.

>
> eQSL isn't double-blind and in the process lowers LOTW's security level.

Hmmm. Seems you don't understand the eQSL system. I cannot get the info on a QSO until there is a match in my log. I get rejects if I'm 'not in his log,' but that's it.

>
> We should discuss the complete inability of eQSL to deal with one call
> shared between a couple of locations.
>
> Mike

QTH doesn't matter. Not one whit! Your argument proves beyond a doubt that ARRL cannot accept eQSL for DXCC credit, but not the other way around. The award sponsor dictates the level of security involved in procuring the award, not you, me, or the ARRL. Get this...the county hunters allow 'relays.' No kidding! If you can hear the station and I can't but I can hear you, I can work the guy via a relay through you and eQSL the QSO. Whatsupwithat? Seems to make the county chase pretty bogus. But that's what the award sponsor allows, and lots of folks chase counties. I've had many requests for relays when mobile and simply refuse the QSO. We cannot change methods or procedures of the sponsor no matter how ridiculous they seem. If they accept eQSL, or relays, they accept it. End of discussion no matter how much 'we' don't like it.

My point? If the sponsor allows eQSL for credit, then withholding a confirm via eQSL is like refusing to allow the recipient of a QSL to submit it to a card checker. The sponsor allows eQSL as a checker--end of discussion. ARRL does not accept eQSL as a checker for a number of reasons--end of discussion. I would be CQ would accept LOTW confirms, as would the county hunters, as would _____ fill in the blank. Although sponsors requiring grid or some other data could not use it if it isn't in the LOTW database.

That reduces the security not at all. If you really worked him, then what is
the problem with sending in the report to LotW.
If you did not really work him then the entry in eqsl.cc is useless for
submission to LotW.

You are no going to say, but you may have logged it wrongly, well that is
just a typo, you really did work the station. I see no problems here.
If it is a problem they are going to have to outlaw all of the master data
and country files in contest logging programs and all of the other computer
assisted logging methods, gimme a break.

Maybe you did or maybe I didn't make it clear enough !!!

What I was referring to were LoTW QSL's that say I bought for DXCC credit, but were faulty in some other respect like lack of GRID for VUCC credit.

Of course I'm assuming that if I "Bought" an LoTW QSL I could apply it to as many Awards that the ARRL/LoTW system supports.

On the other hand maybe we will have to pay 3 times for the same QSL if we want to apply it to DXCC, WAS, & VUCC Awards !!!

That still doesn't make sense to me.
Why would you pay/claim for credit, a lotw qsl that was missing information you need for an award.
If you got a qsl in the mail and it didn't have an iota number you wouldn't send it in to iota desk.

and are you saying that if you do claim a lotw qsl, one payment should cover all awards, from any group, that it would be acceptable for?

Presently, you can send in a qsl card to the DXCC desk for credit as a USA contact.
And then send the same card in for a WAS contact.
But you would have to pay the fee required for each award submission even though it's the same card.

I'm having a bit of trouble following you, but then I admit to being dense.

You only "pay" for those that you select to apply for an ARRL
award. Otherwise LotW cost you nothing.

That's interesting. I have 19,876 QSOs in both systems.

LOTW 2443 75 countries
eQSL 2238 73 countries

The country count is approximately the same. Figuring out the cross-over is difficult.

Out of the 20,000 QSOs, 15 people have requested a eQSL from me and they are not in my log. Of these, 12 of these are from SWLers, which are requesting a confirm of a QSO with another ham, which is why eQSL rejected the Q (it's not a QSO).

I'll have to research the SWLers and accept them if they have a good match. SWLing is BIG in many countries and an absolute requirement for several years before they can get a ticket. Another reason to get AGed.

That's a matter for the sponsors (eQSL.cc). I doubt they will
be willing to pay for access to QSO credits from ARRL.

I question if the eQSL.cc awards are recognized by anyone outside
of eQSL. They haven't even been able to aggregate QSLs/QSOs I
have under multiple calls into a single awards account - at least
LotW has done that right.

You are the one that doesn't understand the eQSL system.

If VU4DX uploads a log that shows he worked K4IK at 16:00z,
April 1, 2000 on 1.825 MHz, that QSL with show up in my eQSL
inbox with the reject and accept columns marked. If that
QSO is not in my log (he miscopied IK4IK or 4K4IK), I can
still accept that eQSL.

In addition, I can put that "QSO" in my log and upload the
record to LotW. If VU4DX uploads the same log to LotW that
was uploaded to eQSL, I have an Andaman & Nicobar confirmation
that is entirely bogus.

Thus eQSL's security flaws have compromised LotW (and also
DXCC).

Why would you do that? That's quite an admission in such a public place. Seems to me, you just jeopardized the integrity your whole log--and possibly participation in the DXCC program! Intentionally tampering with internal controls is a serious issue. How many other times did you do this?

As far as your example, I'll have to look at my eQSL pages a bit closer. I guess I have not seen what you describe. Only the 'not in log' items. But then, I've never attempted to cheat so I don't look for the opportunity. Even if I found the opportunity, I wouldn't take advantage of it...

For what it's worth, you could do the same stunt with either a direct or a buro QSL card, a 20M QSO, or an email to your buddy VU4DX. The security measures advocated suggest that everybody should send all QSL cards to ARRL direct and let them match them up. So are direct and buro QSLs going to be questioned too?

I did not say I did it ... I said it could be done (I don't
have VU4 on ANY band). eQSL offers a significant opportunity
to "game" LotW and if I were part of the ARRL staff working in
the awards area I would think about suggesting that the Board
of Directors consider any and all avenues to protect LotW and
DXCC from possible dilution by eQSL.

You might not ... however, the same kind of person who would
submit an altered 17 meter QSL for 160 meter WAZ would do it
in a flash.

> For what it's worth, you could do the same stunt with either
> a direct or a buro QSL card, a 20M QSO, or an email to your

I didn't say that a user could not conspire with a friend to
upload matching but false "QSOs." However, one would have to
have "friends" in many rare "countries" willing to jeopardize
their own status to make a significant difference. With eQSL
all one needs is a sloppy log keeper.

> The security measures advocated suggest that everybody should
> send all QSL cards to ARRL direct and let them match them up.
> So are direct and buro QSLs going to be questioned too?

Physical cards have always been examined with great care. Why
do you think ARRL does not allow 160 meter cards or cards for
QSOs more than 10 calendar years old to be processed by field
checkers? The staff who process cards on a daily basis know
what to look for, know what cards may be bogus, etc. Perhaps
they will eventually develop a list of known "sloppy logs" and
require some additional documentation for QSOs with those

Thanks Joe for clearing that up. It's amazing how a little word "If" can change the whole meaning of an entire paragraph. I re-read your post. My mistake... Sorry...

But I wonder how often this occurs? People spend their lives in jail because of mistakes, but I have to believe it's rare. Others get ham radio awards they are not entitled to, but again, I have to believe it's rare. Cheating is just too much work! One errant eQSL will not change the actual intent of the awards being granted.

We've identified yet another important internal control. "Independence" is important. It would be virtually impossible to alter a felonous DXCC participant's award outcome when said felon needs to 'befriend' people separated by such distance, and further motivate them to 'cheat.'

>
> > The security measures advocated suggest that everybody should

So we've identified important internal controls and one internal control that cannot be replaced--the eyes and ears of staffers with a brain connected to the fingers shuffling paper at ARRL the DXCC desk--a control that is not implimented at eQSL. So we are again in complete agreement, the ARRL cannot accept eQSL as a card checker.

However, my participation in this thread is really about the non-DXCC awards sponsored by entities other than the ARRL. My argument is that the DXing and Domestic ham radio community's boycott of eQSL is unfounded. I have yet to hear ONE valid argument in favor of not participating in eQSL by uploading logs and getting AGed... This observer and participant in both programs (LOTW and eQSL) would appreciate an explanation from those participating in the boycott of eQSL.

Although I do upload my logs in both places and ALL of my various calls are "AG" I do object to those who gladly accept my eQSL but refuse to participate in LotW. They may be able to use my eQSL for their virtual awards but they do not return the favor by providing a confirmation that is accepted for the award program I care about ... the first and only universally recognized awards program.

Every one of my eQSLs carries the comment:

"Please QSL via ARRL Logbook of the World"

Unless the eQSL community begins to participate in Lotw in larger numbers, I could support a boycott of eQSL.

Come on guys, someone out there must have worked me as a Novice.
I almost made DXCC as a Novice.
I was WN9VOL between July 67 and through April 68.

You don't have to upload your entire old log...
But if your looking through your oldies and spot me.
I'd love to get ONE qsl for my old Novice call.

LOL

That's the double blind aspect of LoTW.
If I make a mistake and copied wa4fm as na4fm, and submit a LoTW,
YOU WILL NEVER SEE IT. You will never know it's there

unless you make the identical mistake with regard to date/time/band.
probably have a better chance at the lottery.

Of course QTH matters. eQSL has a WAS award. I operate mostly from NM but some from MO. My call is registered in MO. So when you work me in NM you get MO credit from eQSL. In addition my county in NM is relatively rare -- instead of Taos County you get St. Louis County.

LOTW handles this quite well. It also handled my /KH6 stuff from 20 years ago quite well. Had to get an additional certificate but that took about one minute to request and about an hour to get granted.

On the other hand, the "committee" at eQSL required me to resend my license to get a registration for "WA0SXV/5" AG'ed even though WA0SXV was already AG'ed. And I can't aggregate any of the numbers. And I can't operate WA0SXV from two locations.

The failure of hams to "AG" their eQSL registration is a real nuisance. In 120 days I was well over DXCC in LOTW. I'm currently at 98 countries in eQSL. I have well more than that in eQSL -- but they're not "AG".

Mike

I am not aware of the ability to get one side of the QSO until there is a match.

>
> eQSL isn't double-blind and in the process lowers LOTW's security level.

Hmmm. Seems you don't understand the eQSL system. I cannot get the info on a QSO until there is a match in my log. I get rejects if I'm 'not in his log,' but that's it.

>
> We should discuss the complete inability of eQSL to deal with one call
> shared between a couple of locations.
>
> Mike

QTH doesn't matter. Not one whit! Your argument proves beyond a doubt that ARRL cannot accept eQSL for DXCC credit, but not the other way around. The award sponsor dictates the level of security involved in procuring the award, not you, me, or the ARRL. Get this...the county hunters allow 'relays.' No kidding! If you can hear the station and I can't but I can hear you, I can work the guy via a relay through you and eQSL the QSO. Whatsupwithat? Seems to make the county chase pretty bogus. But that's what the award sponsor allows, and lots of folks chase counties. I've had many requests for relays when mobile and simply refuse the QSO. We cannot change methods or procedures of the sponsor no matter how ridiculous they seem. If they accept eQSL, or relays, they accept it. End of discussion no matter how much 'we' don't like it.

My point? If the sponsor allows eQSL for credit, then withholding a confirm via eQSL is like refusing to allow the recipient of a QSL to submit it to a card checker. The sponsor allows eQSL as a checker--end of discussion. ARRL does not accept eQSL as a checker for a number of reasons--end of discussion. I would be CQ would accept LOTW confirms, as would the county hunters, as would _____ fill in the blank. Although sponsors requiring grid or some other data could not use it if it isn't in the LOTW database.

Under FAQ in eQSL:

More than one QTH or owner for the same callsign. If the same callsign
needs to be registered to multiple owners or in multiple QTHes to the
same owner, each account must have a different effective date range.
This is all handled automatically within eQSL.cc. Go to MY PROFILE, and
follow the link to MY ACCOUNTS. There you can add a new account with the
same or a different callsign and attach it to your current account. Then
you can log into that account, change the profile to show the new QTH
and the dates of operation at that QTH. Any cards that come in for the
time period covered under that profile will be automatically routed into
the correct InBox. This is also the way we handle multiple owners of the
same callsign, as in SK or re-issued callsigns, special event stations,
etc. It is extremely important that you have the correct dates set up in
MY PROFILE for each callsign! If for some reason you are not able to
register the date range you need, please contact our Support volunteers.

I think this addresses your problem?

1367. RE: [ARRL-LOTW] Eqsl Disclaimer & LoTW plug !!!

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-23 11:33:48 UTC
From: Mike Mellinger WA0SXV
Topic: 1330 Message: 1367

No, it absolutely does not. I live at both locations. Dates are interspersed. I even operated one contest from both locations - one on Friday evening, one on Saturday evening.

I have read the FAQ. Several times.

At one point there was an announcement that eQSL was doing a beta test of some kind of multiple location handling. That was a while ago and I've never heard anything else about it.

LOTW allows you to attach as many locations as you wish to a given call. Works great.

73,

Mike WA0SXV

Subject: Re: [ARRL-LOTW] Eqsl Disclaimer & LoTW plug !!!

Mike Mellinger WA0SXV wrote:

Of course QTH matters. eQSL has a WAS award. I operate mostly from NM but some from MO. My call is registered in MO. So when you work me in NM you get MO credit from eQSL. In addition my county in NM is relatively rare -- instead of Taos County you get St. Louis County.

LOTW handles this quite well. It also handled my /KH6 stuff from 20 years ago quite well. Had to get an additional certificate but that took about one minute to request and about an hour to get granted.

On the other hand, the "committee" at eQSL required me to resend my license to get a registration for "WA0SXV/5" AG'ed even though WA0SXV was already AG'ed. And I can't aggregate any of the numbers. And I can't operate WA0SXV from two locations.

Under FAQ in eQSL:

More than one QTH or owner for the same callsign. If the same callsign needs to be registered to multiple owners or in multiple QTHes to the same owner, each account must have a different effective date range. This is all handled automatically within eQSL.cc. Go to MY PROFILE, and follow the link to MY ACCOUNTS. There you can add a new account with the same or a different callsign and attach it to your current account. Then you can log into that account, change the profile to show the new QTH and the dates of operation

at that QTH. Any cards that come in for the time period covered under that profile will be automatically routed into the correct InBox. This is also the way we handle multiple owners of the same callsign, as in SK or re-issued callsigns, special event stations, etc. It is extremely important that you have the correct dates set up in MY PROFILE for each callsign! If for some reason you are not able to register the date range you need, please contact our Support volunteers.

I think this addresses your problem?

And you will not hear one because there are none. Keep pushing, eqsl.cc is a very nice addition to ham radio. It does not and should not replace DXCC but it is a very useful item.
By the way, they were at one time requiring the double blind match which would have been nearly as secure as LotW but the screaming started and the membership declined and they changed it. For what they do that was the right thing to do.

You have a very good point here. There is no excuse at all for a person not to participate in LotW, none that I can think of at any rate unless they have no computer with access to the internet. Of course if they are on

eqsl.cc they must have that!

I think that is bad design but it does NOT affect the system integrity. It
is just an orphaned record with no match so it does not matter.

Mike is correct an beat me to the post. What a pain to do this by date unless you were at one location for a while and then another and don't go back and forth. It is also not unique as he said since time is not included. I don't bother, old QTHes are just not uploaded and will not be until and unless this is fixed.

If you make a mistake with a LoTW upload, simply redo the upload with the correct information.
The incorrect QSO will sit on the database with no match and the corrected QSO will be available.

Jim

Don't make a mistake in LOTW, you can't delete the contact. (unless
they changed that.)

The "process" is totally useless for county hunters and
mobiles/rovers in QSO parties/VHF/UHF contests. They
often operate from a dozen or more different counties
or grid squares during a single 48 hour weekend.

LotW handles those stations just fine although there
is a minor issue with self-assigned identifiers - e.g.,
K4IK vs. K4IK/ORG vs. K4IK/SEM, etc.

OK Gang, here is the answer straight from HQ.

Mike,
Right now, it appears that FSK-441 and JT-65 are not specifically
supported. You can use the mapping utility in TQSL to present the QSOs as
some other mode, but there is no accepted standard. We should be doing a
new tqsl software release in a month or so, and I hope we will address
these and newer modes at that time.

I have sent feedback to eQSL on this matter at least twice. No substantive response.

On the other hand, having been warned by the failures in eQSL I did correspond quite a bit with the ARRL during the LOTW design and copied my division director on the correspondence. I was assured that they had taken multiple locations into account and as it turns out they certainly did.

You are missing the point Mike. If the award sponsor allows completely fabricated logs, then they are allowed. If they will grant an eWAS with the full knowledge that you have been all over the planet when you worked those Qs, and the sponsor allows that, then QTH does NOT matter one whit.

For the vast majority of folks, one QTH at a time is quite sufficient. For them, the eWAS means something to THEM, which is why they chase the award. Your point clearly identifies yet one more reason why the ARRL cannot accept eQSL as a card checker, but it does not identify a reason why LOTW cannot check cards for eQSL, or why people would choose to boycott eQSL and all the award sponsors that choose to accept eQSL as a card checker.

I'm not boycotting either and you *still* miss the point.

There will always be log fabrication. No matter what. That is the problem of the idiot who gets pleasure out of receiving an award that they don't deserve. Their lack of self-esteem and need for attention isn't my problem.

I'm a full participant in eQSL annoying though it is. I have similar return rates on both. In LOTW I upload my logs and I'm finished. I look at the results occasionally.

On eQSL I have to check constantly to see whether someone has loaded yet another attempt at getting a card which isn't in the log. Even though I have well more than a hundred countries I have to wait until the DX authenticates. I have to field the complaints from the guys who wanted a NM QSO and got credit for a MO QSO. In an effort to accommodate them I have registered /5 and they can log to that to get their NM credit. Of course when I download the /5 stuff I then get a couple dozen emails complaining about duplicate log entries. BAD DESIGN. And the location problem exists not just for those fortunate enough to have second homes. Mobiles, portables, lighthouse stations, and everyone else that doesn't stay put has the problem.

Inadequate design, arbitrary authentication checking, but you're right -- the eQSL awards are fun and those I get I'll know I got honestly.

Mike

Because eQSL will not accept, nor will they pay the cost for
LotW checked cards.

> or why people would choose to boycott eQSL and all the
> award sponsors that choose to accept eQSL as a card checker.

for the very reason that ARRL will not can cannot accept eQSL
cards for DXCC. eQSL DOES NOT DO any "card checking." It is
a totally insecure system with no way to assure or prevent
tampering. In addition, eQSL does not (properly) support
multiple QTHs and rover operations necessary for VUCC/HF
Grid/US counties/ITU zones and other awards.

eQSL is the electronic equivalent of, and no better than, a
"QSL bulletin board" at any large hamfest.

And why would they need to?. If I were to ask LOTW to verify the QSOs, pay the fee to the ARRL for doing so, they could eMail eQSL, or CQ, or the Michigan QSO party, or whoever I direct them to send the 'credits' to. Boda-Bing-Boda-Boom. ARRL gets its cut, the award sponsor gets the QSOs confirmed, and I get my award based on the sponsor's criteria.

Geez Joe. This is obvious--a point you keep hammering home and I keep agreeing with you. But in this case, LOTW does the 'checking' and sends the credit to eQSL, or CQ, or whoever.

So what? LOTW is secure. And it is LOTW that is collecting the fee for doing the checking, which is better than the sponsor's award criteria. Why would CQ or the MI QSO Party deny a LOTW 'checked' QSO?

>

So what? I guess I'm confused as to where you are going with this. Do you want the award sponsor to beef up their criteria? Then the issue should be taken up with the sponsor. Meanwhile, let's free up the credits already in LOTW to claim the other awards.

1382. Incomplete QSL's(was:Eqsl Disclaimer & LoTW plug)

Yahoo group: ARRL-LOTW (2003 — 2007)
Date: 2004-06-23 19:19:33 UTC
From: R Johnson
Topic: 1330 Message: 1382

Let me try it again.
FIRST, "Major Assumption": LoTW IS NOT GOING TO BE FOR JUST FOR DXCC !!!!

About 40% of my LoTW QSL's are missing some "Station Data", Grid, Zones,. etc. !!!

I should have said:
"What we need is a LoTW "REJECT BUTTON" so that if I had an Incomplete QSL, I could reject the QSO for say "Lack of Grid" or whatever was missing."

This "Rejection" could be processed by LoTW and LoTW could notify the sender that they need to go back to TQSL and fill in ALL of their "Station Data" and resubmit their logs. so that they are useful for awards other than DXCC

Assumptions:
1- ARRL/LoTW supports (someday) the following awards: DXCC,WAS,VUCC,CQZ, & IOTA.
2- I'm working on my 6M DXCC and VUCC
3- I work OX3?? on 6M
4- He has NOT filled in ALL of his "Station Data" in TQSL.
5- I get an LoTW QSL showing that it is only good for DXCC (missing Grid, Zones, & IOTA).

So I miss out on VUCC, CQZ, and IOTA credit. Now I have to hope I can work another OX station on 6M to get a Grid for my 6M VUCC !!! Not to lightly !!!

This whole situation could be avoided if LoTW required stations to setup TQSL completely.

I have also been "skunked" by incomplete station data. in my case an ON without his grid for a 6M contact.
But, you can't require the data. Many stations simply do not know the relevant information. If you force them to complete a form they will either give up, or fill in any thing that comes to mind.

What we need is PR and education.....

We need to talk it up on the air and the ARRL should be beating the drum in every issue of QST...

You'd figure a guy active on 6 would know his Grid!

> But, you can't require the data. Many stations simply do not know the
> relevant information.

If folks weren't lazy, they could easily look it up ... or ask their buddy across town! With the Internet available, these days "not knowing" is a lame excuse. It's like the guys who ask ... "I'm looking for info on ______." Why not go to "Google" and find it yourself?

> We need to talk it up on the air and the ARRL should be beating the drum
> in every issue of QST.

It's like every other thing in Amateur Radio (CW, ARES/RACES, contesting, etc.,) ... those who are interested, will do it, those who are not, won't. You won't magically make someone interested in something they don't care about, no matter how loudly you "beat the drum"! After a while, the rhythm gets boring and you start tuning it out altogether.

Ron

Hi Jim:
TNX for your reply on this subject, YOU are the first one to agree that LoTW has a problem with "Incomplete Station Data" !!! It's hurting the LoTW program.

I agree 100% that LoTW can't force LoTW users to supply the required info in TQSL, but maybe they could provide a "Check List" in the documentation or the FAQ's outlining just what info they NEED to supply before setting up TQSL.

Maybe another thing that LoTW could do is provide a mechanism so that we could notify LoTW of stations with bad/incomplete info. LoTW could then notify the offending station of the problem and what data is missing, the correct data, and how to correct problem.

Another thing I have noticed, some LoTW Users have computer crashes and when they reinstalled TQSL they neglected to redo there "Station Data".

If LoTW is to succeed with anything other than DXCC, I think they should move fast on getting the WAS & VUCC Awards up and running. These are ARRL Awards and not subject to the vagaries other "Award Sponsors" requirements. First thing First !!!

I'm curious -- what happens if someone discovers, for example, that he had
his CQ and IARU zones confused. Say he corrects this and reuploads to
LOTW. Do the new data overwrite the old, correcting any error or omission?

A simple answer is YES !!!

Just correct you "Station Data" and resubmit your logs !!!

That's what you want? eQSL to accept LotW credits ...

> If I were to ask LOTW to verify the QSOs, pay the fee to
> the ARRL for doing so, they could eMail eQSL, or CQ, or
> the Michigan QSO party, or whoever I direct them to send
> the 'credits' to. Boda-Bing-Boda-Boom.

You could probably do so right now - without paying a dime -
by doing a "QSL only" download and sending that ADIF to the
award issuer. However, I doubt that any legitimate award
authority would accept an unverified download file. You
could, if you cared to do so, supply the award authority
with your login id (call - not so difficult) and password
(I question that) and allow them to download the QSL records.

IMO, any access to the database by a third party award sponsor
shold be automatic and not require ARRL staff resources to
print, certify, mail/e-mail or otherwise process data.

> ARRL gets its cut, the award sponsor gets the QSOs confirmed,
> and I get my award based on the sponsor's criteria.

ARRL have regularly expressed an interest in making the LotW
available to any legitimate award issuer. If there isn't
already an API in place, it should not be very hard to create
one if there were serious interest from a responsible award
sponsor.

Again, there is nothing that would prevent eQSL from gaining
access to the LotW database if they chose to set down and
work out the details with ARRL. If it required custom software
or staff time to print, certify and mail data records, I'm sure
there would be a cost to be born by eQSL -- I would not favor
spending ARRL membership funds to provide a benefit to eQSL
(not given the costs charged to every DXCC and LotW user!).

>
> So what? I guess I'm confused as to where you are going with
> this. Do you want the award sponsor to beef up their
> criteria?

Yes, I want (expect) every award sponsor to require at least the
level of checking involved with GCR. eQSL does not even rise to

that minimal level.

I would prefer that every sponsor require submission of cards for checking or an authenticated, double-blind electronic confirmation but I realize that level of scrutiny may not be justified for something like "Worked all Michigan" or "The Potomac Basin Filibuster Award."

> Meanwhile, let's free up the credits already in LOTW to claim
> the other awards.

The credits are already there ... it is up to the sponsors of the other awards to approach ARRL for access and work out the details for obtaining that access.

If ARRL/LotW is to spend time and resources on "outreach" it is far better spent on raising awareness of LotW among the foreign user community and getting more DX stations signed up.

How about this one?

As a non-US station, LOTW requires me to send a photocopy of a
government issued ID. They have no business with a copy of my government
issued ID, and I will not send it. They even suggest the first page of
my passport!

Yes, I know they are only going to use it to verify my ID and then
destroy it. They still have no business with it.

Surely there are other ways they can verify my ID.

I have talked to a lot of amateurs from various countries who feel the
same way. I keep seeing complaints of not enough DX stations
participating - well, I suspect this requirement is keeping a lot out.

I have said this since day one.

> I agree 100% that LoTW can't force LoTW users to supply the

Why not? I think the data is nto wroht anythig if it is nto complete. Any card you get on paper has all of this information in 99.99999 % of cases becaseu it has the address.

Don't they accept a scanned copy of your license? If not, they should. You can't complain about sending that, or do you want eqsl.cc to start issuing digital certificates too?

They want a copy of my license AND a copy of one other government-issued
id, and they want them sent via postal mail, not email.
